

Measurement of the Boron to Carbon Flux Ratio in Cosmic Rays with the DAMPE Experiment

Monday 19 July 2021 19:18 (12 minutes)

The DArk Matter Particle Explorer (DAMPE), a space-based high energy particle detector, has been operated on-orbit for more than five years. The large geometric factor and good charge resolution enable DAMPE to have very good potential to measure cosmic-rays up to 100 TeV. Knowledge of the boron to carbon (B/C) flux ratio is very important in understanding the propagation of cosmic rays, especially in TeV energy range. In this contribution, the latest progress of the B/C flux ratio analysis based on the flight data collected by DAMPE will be presented.

Keywords

CR Direct Detection, B/C Flux Ratio
