Associated production of $t\bar{t}$ and heavy flavor at CMS

Thursday 29 July 2021 11:00 (15 minutes)

A comprehensive set of inclusive and differential measurements of top quark pair production in association with light, c- and b-jets is presented and results are compared to theory predictions. The status of the search for four top quark production, to which the LHC experiments are starting to be sensitive, and that has important BSM re-interpretations, is also reported.
