AIMS, a few actions and their impact

Thursday 29 July 2021 16:48 (16 minutes)

The African Institute for Mathematical Sciences is a network of excellence centres for innovative post-graduate training in mathematical sciences in Africa. Established in 2003, today AIMS counts 6 institutes in 5 African countries (Cameroon, Ghana, Rwanda, Senegal, South Africa) and focuses on academics, research, and industry initiative. The students at AIMS follow different academic cursus (mathematical sciences, co-operative education program, climate sciences, machine learning and intelligence). I will present a few actions and the impact that this prominent education network has on the scientific life of some African students.
