Determination of the Collins-Soper Kernel from Lattice QCD via moments of quasi-TMDs

Tuesday 16 November 2021 15:00 (20 minutes)

We present lattice results for the non-perturbative Collins-Soper (CS) kernel, which describes the energy-dependence of transverse momentum-dependent parton distributions (TMDs). The CS kernel is extracted from the ratios of first Mellin moments of quasi-TMDs evaluated at different nucleon momenta. The analysis is done with dynamical $N_f = 2 + 1$ clover fermions for the CLS ensemble H101 (a = 0.0854 fm, $m_{\pi} = m_K = 422$ MeV). The computed CS kernel is in good agreement with experimental extractions and previous lattice studies.
