

# A First Look from A SUSY Perspective

## on Missing $E_T$ in 900 GeV data

D.Krücker, I.Melzer-Pellmann, N.Pietsch, H.Schettler M.Stein,

Dirk Krücker

# CMS AN-2010/010

## Study of the 2009 LHC Collision Data at 900 GeV and 2360 GeV from a SUSY Perspective

The SUSY CAF Team – B. Bainbridge<sup>1</sup>, B. Betchart<sup>2</sup>, A. Bryer<sup>1</sup>, R. Demina<sup>2</sup>, M. Edelhoff<sup>3</sup>, H. Flächer<sup>2</sup>, S.A. Koay<sup>4</sup>, D. Krücker<sup>5</sup>, E. Laird<sup>6</sup>, N. Mohr<sup>3</sup>, N. Saoulidou<sup>7</sup>, H. Schettler<sup>8</sup>, V. Sordini<sup>9</sup>, and D. Sprenger<sup>3</sup>

- Supporting analysis note (draft) to
  - PAS JME-10-002: Performance of Missing Transverse Energy in 900 and 2360 GeV pp Collision Data
    - PAS is public since Saturday

# Data and Monte Carlo

- Data 900 GeV
  - /MinimumBias/BeamCommissioning09-SD\_AllMinBias-Jan23Skim-v1/RAW-RECO/
- MC (Pythia 6.42 min bias):
  - /MinBias/Summer09-STARTUP3X\_V8P\_900GeV-v1/GEN-SIM-RECO/
- Standard event selection, see note for details  
(tech. bits 0/40/41 !36-39, clean vertex, etc.)

# Jets

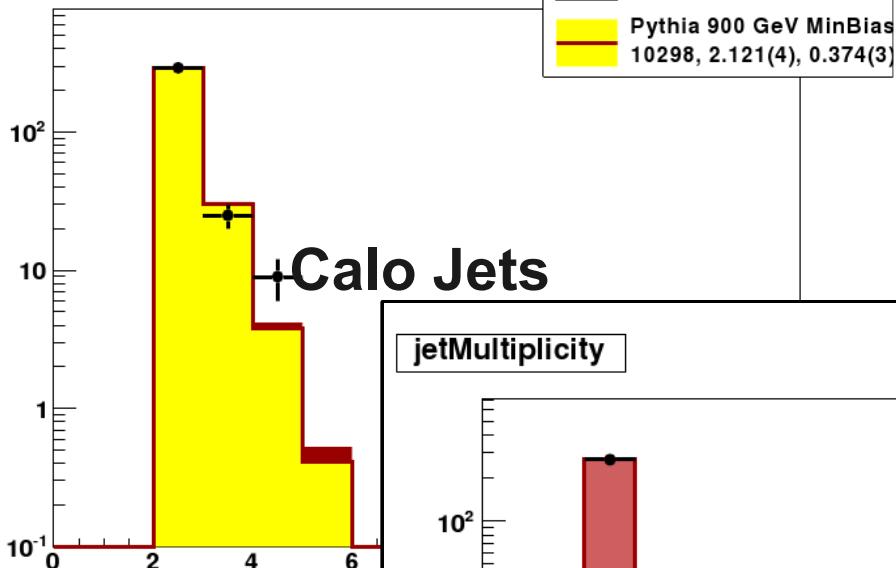

- 3 kinds of jets (anti-kt, R=0.5) following the recommendation of the JetMET POG
  - **Calo** ( $p_t > 10\text{GeV}$ ,  $|\eta| < 3$ , lose jet ID, ...)
  - **JPT** (Jet-Plus-Track,  $p_t > 8 \text{ GeV}$ ,  $|\eta| < 2$ , loose jet ID, ... )
  - **Particle Flow** (  $p_t > 8 \text{ GeV}$ ,  $|\eta| < 3$ , loose extended, ... )
- $n \geq 2$  jets
  - Multiplicity plots ->

# Jet Multiplicity $n \geq 2$

jetMultiplicity

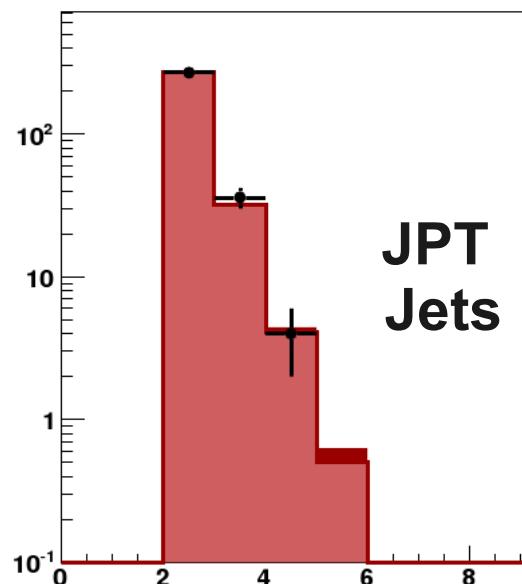

Data 900 GeV  
326, 2.13(2), 0.41(2)  
Pythia 900 GeV MinBias  
10298, 2.121(4), 0.374(3)

Calo Jets

jetMultiplicity

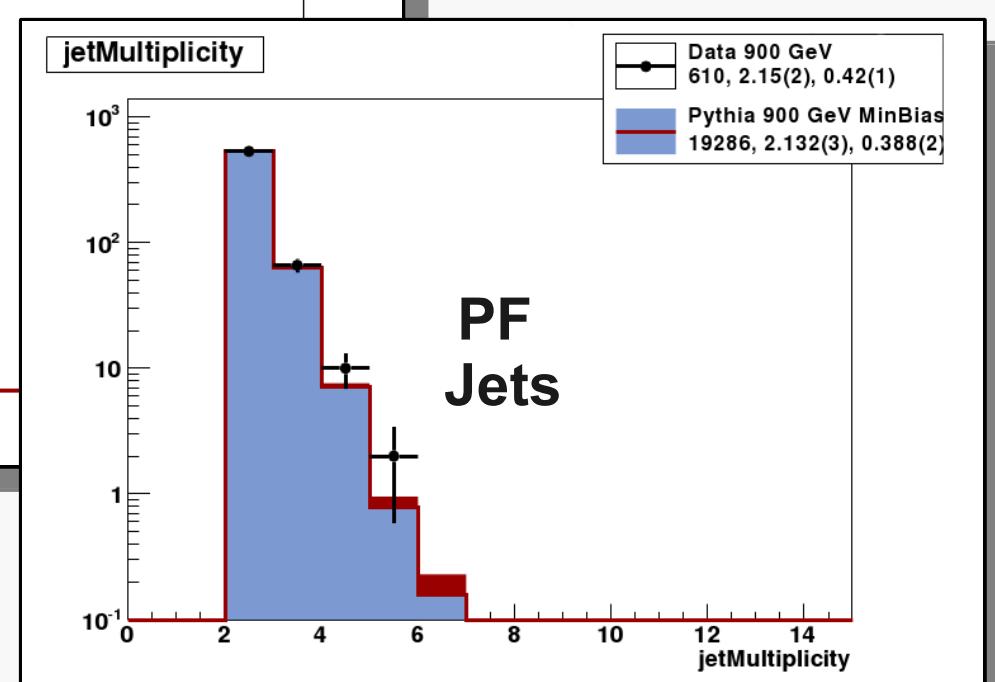

Data 900 GeV  
309, 2.14(2), 0.38(2)  
Pythia 900 GeV MinBias  
10357, 2.135(4), 0.396(3)

JPT  
Jets

jetMultiplicity

Data 900 GeV  
610, 2.15(2), 0.42(1)  
Pythia 900 GeV MinBias  
19286, 2.132(3), 0.388(2)

PF  
Jets

# Missing $E_T$ related Quantities

$$HT = H_T = \sum_{jets} |\vec{p}_T|$$

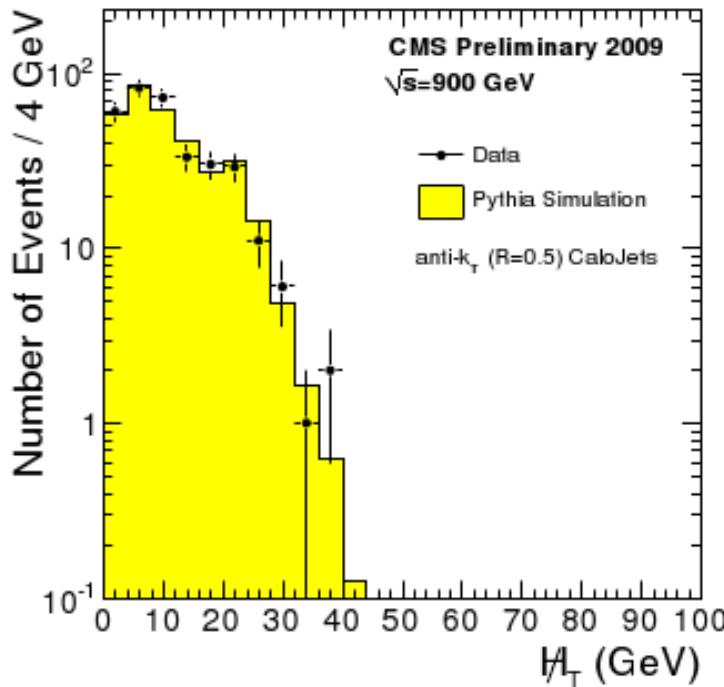

$$MHT = H_T = \left| - \sum_{jets} \vec{p}_T \right|$$

- HT and MHT
  - Sum over all jets, where jets = Calo, JPT, PF
- MET = Calo  $E_T$ 
  - Sum over all calorimeter energy deposits
- MPT – missing PT
  - Sum over all tracks

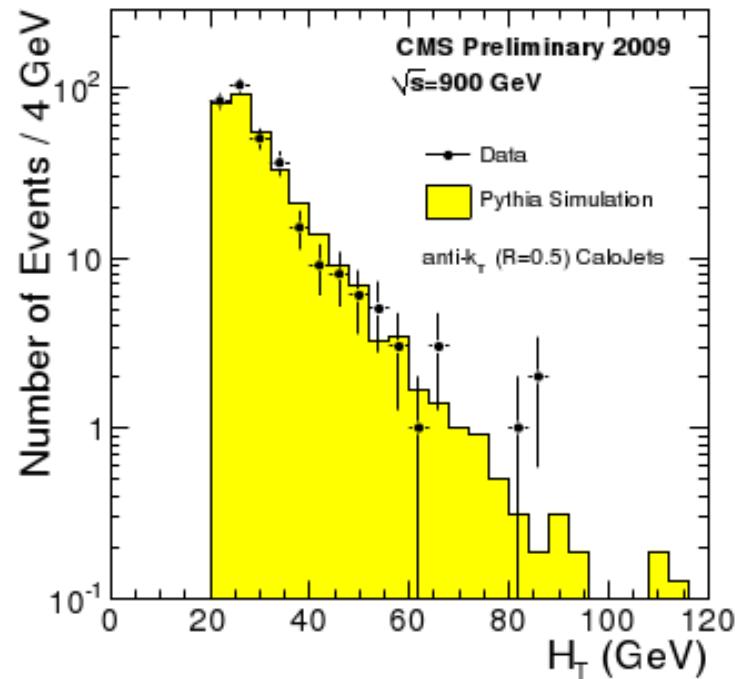

Different nomenclature between AN and JetMET PAS

# Public Plots

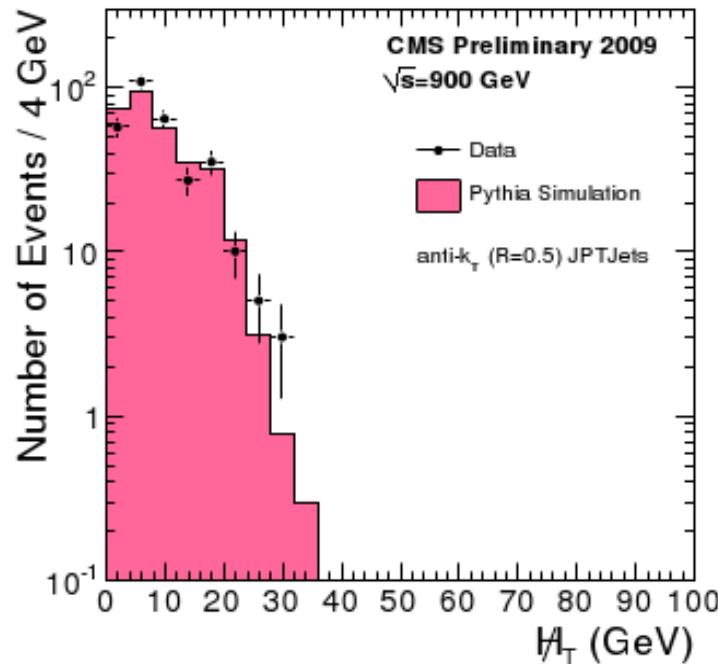

(a)  $H_T$  distribution for Calo Jets.

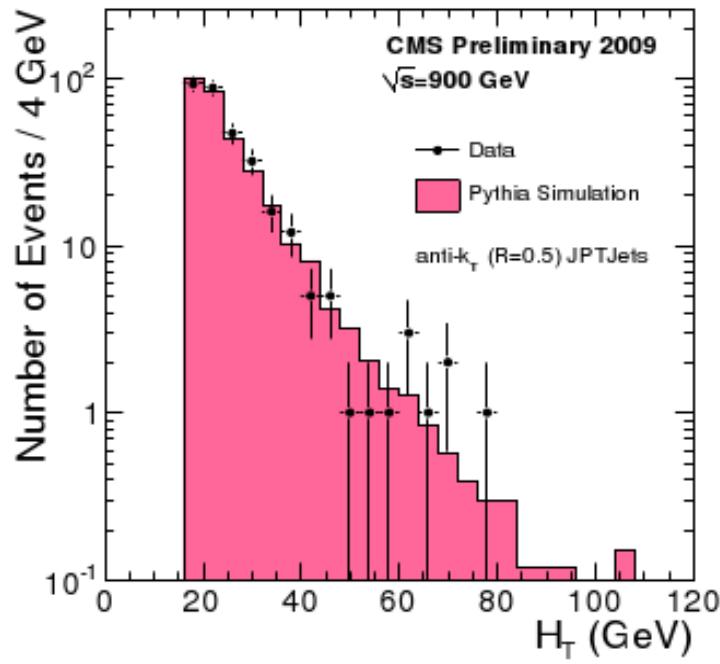

(b)  $H_T$  distribution for Calo Jets.

- No unexpected missing  $E_{\tau}$
- Good agreement with MC

# Public Plots

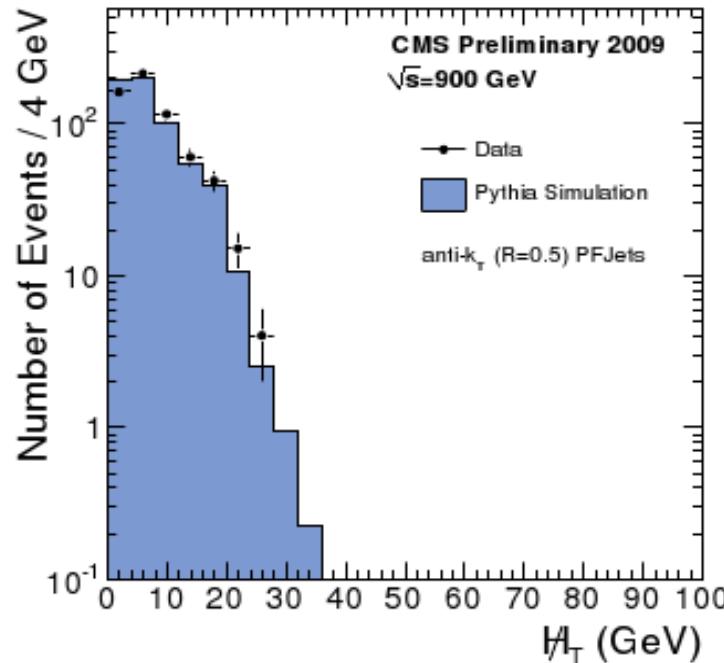

(c)  $H_T$  distribution for JPT Jets.

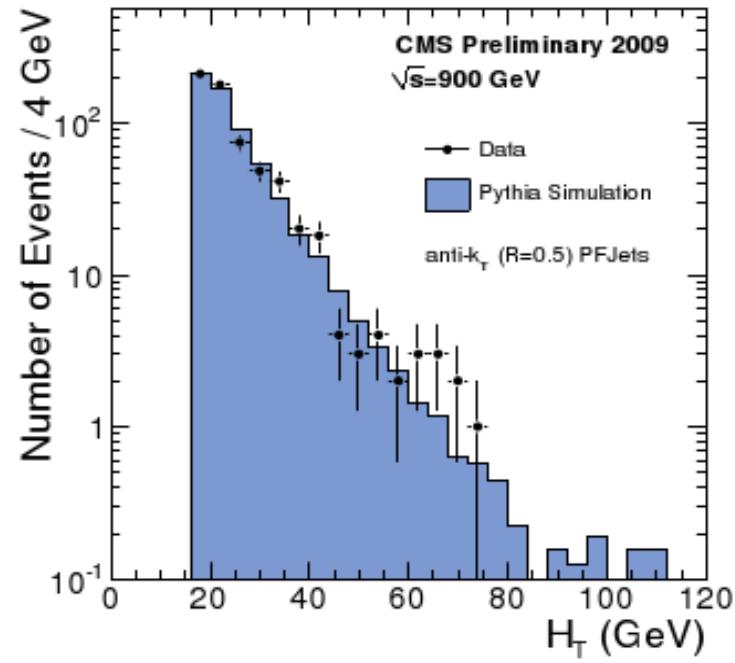

(d)  $H_T$  distribution for JPT Jets.

- No unexpected missing  $E_T$
- Good agreement with MC

# Public Plots

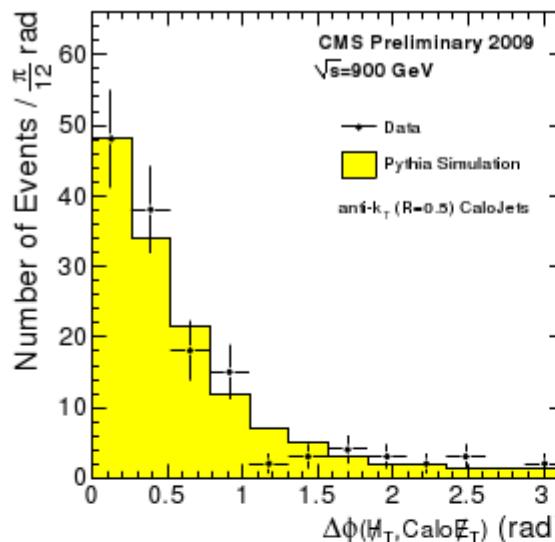

(e)  $H_T$  distribution for PF Jets.

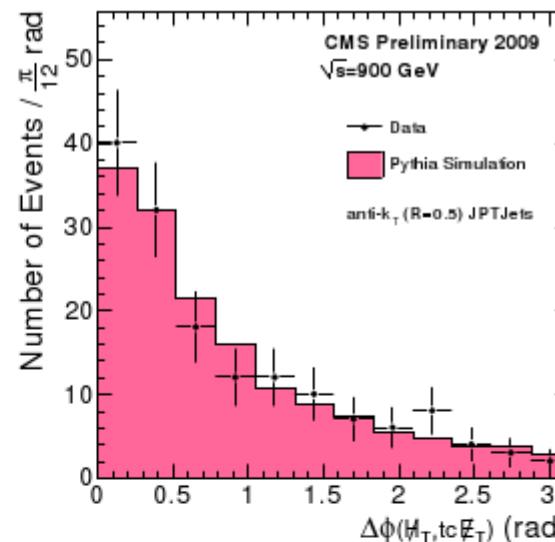

(f)  $H_T$  distribution for PF Jets.

- No unexpected missing  $E_{\tau}$
- Good agreement with MC

# Public Plots

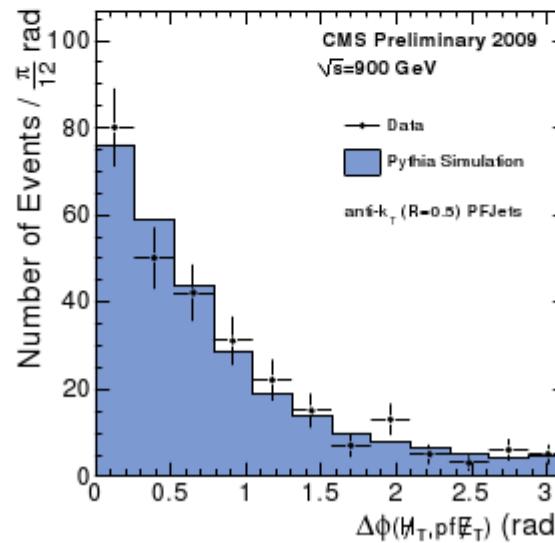

(a)  $\Delta\phi(H_T, \text{calo } E_T)$  distribution for Calo Jets.

(b)  $\Delta\phi(H_T, \text{tc } E_T)$  distribution for JPT Jets.

$\Delta\Phi$  MHT vs MET

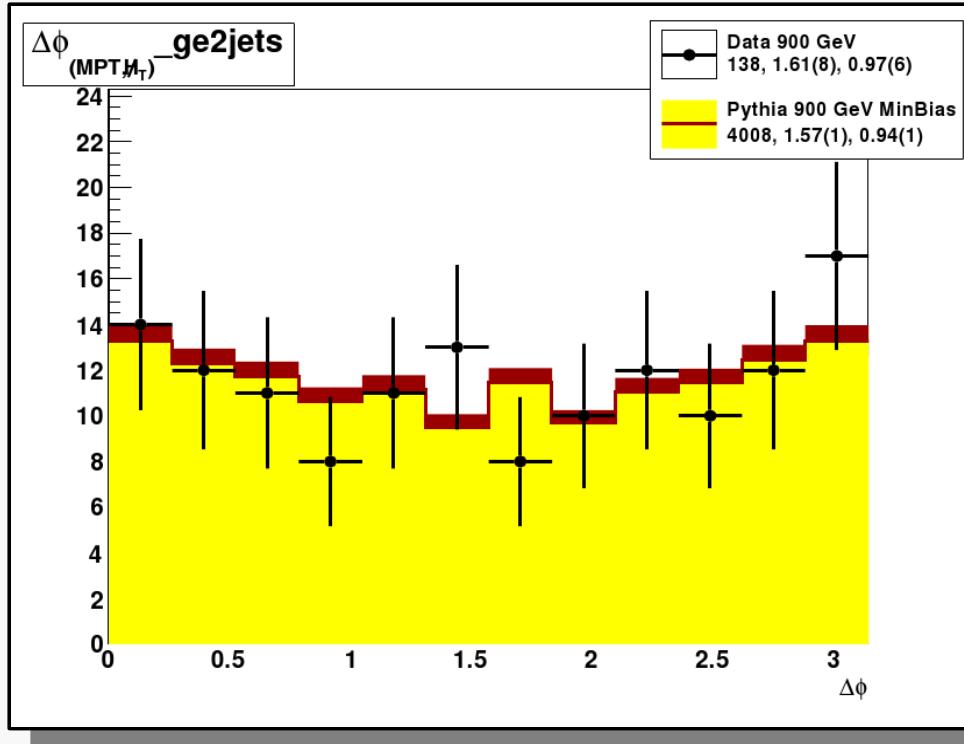

Calo MET  
 $> 5 \text{ GeV}$

(c)  $\Delta\phi(H_T, \text{pf } E_T)$  distribution for PF Jets.

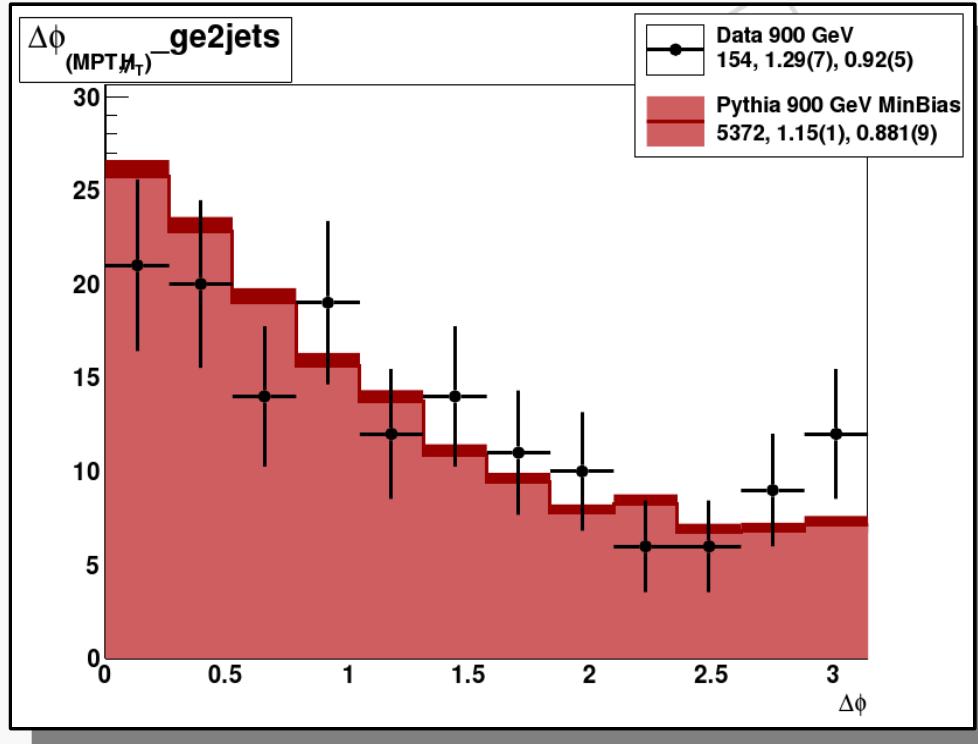

# Non Public: Tracker-Calorimeter Correlations

MPT vs Calo MHT

Calo MET > 5 GeV

MPT vs JPT MHT

- No real missing ET in QCD
