

# Future Collider Forum

## Discussion:

# Organisation and Future Plans

Karsten Köneke, Frank Simon, Georg Weiglein

April 16 2021

# How should we organise ourselves to reach our goals?

- Bottom-up approach, science-driven
- How much emphasis do we want to put on strategic issues?
- The ongoing and planned activities on future colliders are very diverse. How can we achieve a certain level of coherence that allows a cross-fertilisation and the exploitation of synergies between the different activities?
- What are the main topics (going across individual projects) that we want to address?
- How should this be reflected in the structure?
- How should we plan our meetings: scope, structure, frequency?

# What about our overall strategy?

- How can we convince the other fields of science and the general public that particle physics needs a new big collider?
