

Measurement of $B \rightarrow \tau \nu$

Tuesday 24 August 2010 16:46 (15 minutes)

We present a search for the fully leptonic B decay $B^+ \rightarrow \tau^+ \nu_\tau$ in 4.59×10^8 $B \bar{B}$ pairs collected at the Upsilon(4S) resonance using the BaBar detector. We select a sample of events with a reconstructed hadronic B decay, $B^- \rightarrow D^0 X^-$, where X^- represents a combination of charged and neutral light mesons; in the remainder of each event we search for the $B^+ \rightarrow \tau^+ \nu_\tau$ signal.
