A GIS sight on the European XFEL

Friday 17 September 2010 11:10 (20 minutes)

Planning large facilities like the European XFEL needs the help of various tools like request management systems (RMS), engineering data management systems (EDMS), CAD systems, project management systems and mostly for geodetic purposes also geographic information systems (GIS). Each of these systems gives another sight on the project. This paper shows how the European XFEL looks in a GIS and how these data can help the involved working groups during the planning process.
