

Xinyang Li graduated from University of Science and Technology of China with a PhD degree in June 2019. He joined DESY and GFZ as a joint postdoctoral fellow in **Centre for Molecular Water Science (CMWS)** in October. His main work is to study the properties of geological materials at high temperature and pressure. The results of the research are beneficial to the understand the formation and evolution of the Earth and also help to understand the composition of Earth's interior.
