

## **Status of MC simulation @ISS**

- 1<sup>st</sup> discussion about simulations was at the beginning of August between Mihai and Sasha. Mihai got a zip file with G4 code from Sasha and a link to Confluence platform for Trees description produced by G4 code. Mihai compile the code and got a root file with default parameters settings.
- On August 24<sup>th</sup> there was a new meeting with Halina, Shan, Mihai and Veta. Shan gave a presentation about ECAL Reconstruction using different reconstruction methods.
- On August 30<sup>th</sup> Shan meet with Mihai and me, he sharing with Mihai a new root file with MC simulation data.
- After few meetings, we realized that the need for help is on reconstruction data not on developing code for simulation itself.

### **NOW @ ISS:**

- Mihai have a look on the root file, trying to accommodate with the file contains and to do some plots.
- Mihai is writing a code to read data from root file in order to plot some histograms.
- Keep in touch with Shan and give him access to our server to easily exchange scripts and results (plots).
