

regional analysis workshop

XENON

Tuesday, 26 October 2021 - Thursday, 4 November 2021

MPIK

Scientific Programme

The **XENON regional analysis workshop** is designed to push our analysis forward in order to be ready for fast analysis at the end of the **Science Run 0**. We expect to cover a wide range of topics, such as **data processing, simulations, background estimates, fiducial volume optimisation, data corrections, statistical data treatment** and more. The format of the meeting is common work in smaller groups of experts in order to have a fast turnaround of ideas and implementations. The findings of this work will be then presented at out of the regular working group and analysis telecons.
