Discussion on conveners request

Tuesday 24 August 2010 10:50 (20 minutes)

Dear HIP and Millepede developers,
we would like to devote part of the first alignment meeting after
the Summer break to discuss the status of the alignment algorithms.

Having passed the 1/pb threshold, we could expect that our group will be
in a short time asked about the perspectives on using features like mixing
different datasets and using of different constraints (vertex, mass,
beamspot, “external”...)

So we would like to ask you to prepare a (short) report illustrating
features which are already available, still under test or in
development, possibly indicating a realistic timescale or show-stoppers,
if any.
