

8. Annual MT Meeting

Contribution ID: 121

Type: **Parallel talk**

Onboarding DMA Software to ESCAPE-OSSR Catalogue

Monday 26 September 2022 16:50 (15 minutes)

The cooperation between the DMA and the ESCAPE Open-source Scientific Software and Service Repository (OSSR) was established last year. A series of meetings has been organized and held, they were dedicated to joining efforts of DMA-ST2 and ESCAPE OSSR. It was agreed to onboard DMA projects as a domain in the OSSR. GSI-IT took over the management process of the DMA projects onboarding. In this talk we present the procedure by the example of R3BRoot software (simulations and data analysis software of R3B experiments at GSI/FAIR). This pilot project for onboarding (adding) DMA software to the OSSR was used to practice the whole workflow and write down the documentation for our DMA community.

Presenter: TACKE, Christian (GSI)

Session Classification: Data Management and Analysis
