## **Enriching Scientific Research with Metadata: Electronic Lab Documentation Landscape at HZDR**

*Tuesday 27 September 2022 14:40 (15 minutes)*

The topic of electronic documentation draws more and more attention in the research field. The goal of the electronic documentation is to create the most complete descriptions of a data set. This talk provides an overview from the initialization in a research environment over the components, structure and interactions. How the electronic documentation is constructed depends on the existing IT landscape. An example how it can look like will be the landscape at HZDR. One specific aspect of the talk would be the role of an ELN within the electronic documentation.

**Presenter:** GRUBER, Thomas

**Session Classification:** Data Management and Analysis
