Community committees

Consortia

Bring together

- KFS and KFN
- Large-scale photon and neutron research facilities
- Universities
- Research institutions
- Wider community

To make the growing volume of valuable measured data FAIR for the DAPHNE4NFDI community, for the whole NFDI and the scientific community.

DAPHNE - DATA from PHoton and Neutron Experiments
16 institutions, 22 + 83 indiv. colleagues

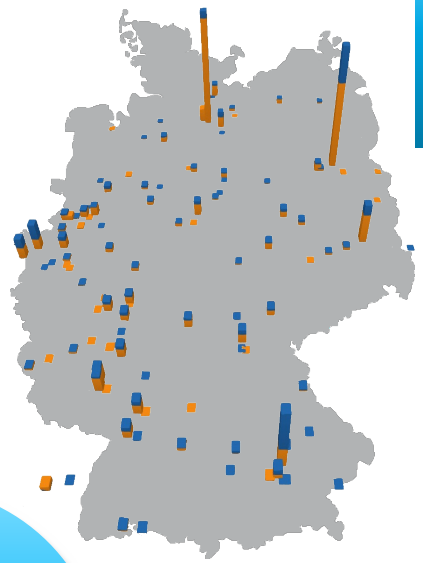

Driven by the user committees KFN, KFS
Commitments of the German facilities +
ESS, ILL, ESRF, EMBL

1. Improve the **collection** of **metadata** about the measurement so that the **measured data** is **reusable** by the wider research community;
2. Implement **searchable curated databases** of raw, intermediate and processed data, **traceable** from **published and unpublished results**;
3. Develop a **curated repository of managed software** developed by leading research groups, accessible to any researcher so that others can repeat the data analysis pipelines and **re-use** the code in their own research;
4. Develop a **multidisciplinary data platform** for NFDI cross-consortia actions;
5. Provide **education** and **training** in research data management.

Research with photons and neutrons in numbers

per year in Germany

8 sources in Germany
33 sources in Europe
94 sources worldwide

3000 participants at facility user meetings

Over 3000 experiments

28 PB data

3000 publications

Reaching a community of over 50 000

from 50 companies,
100 universities,
115 research institutions

5500 users

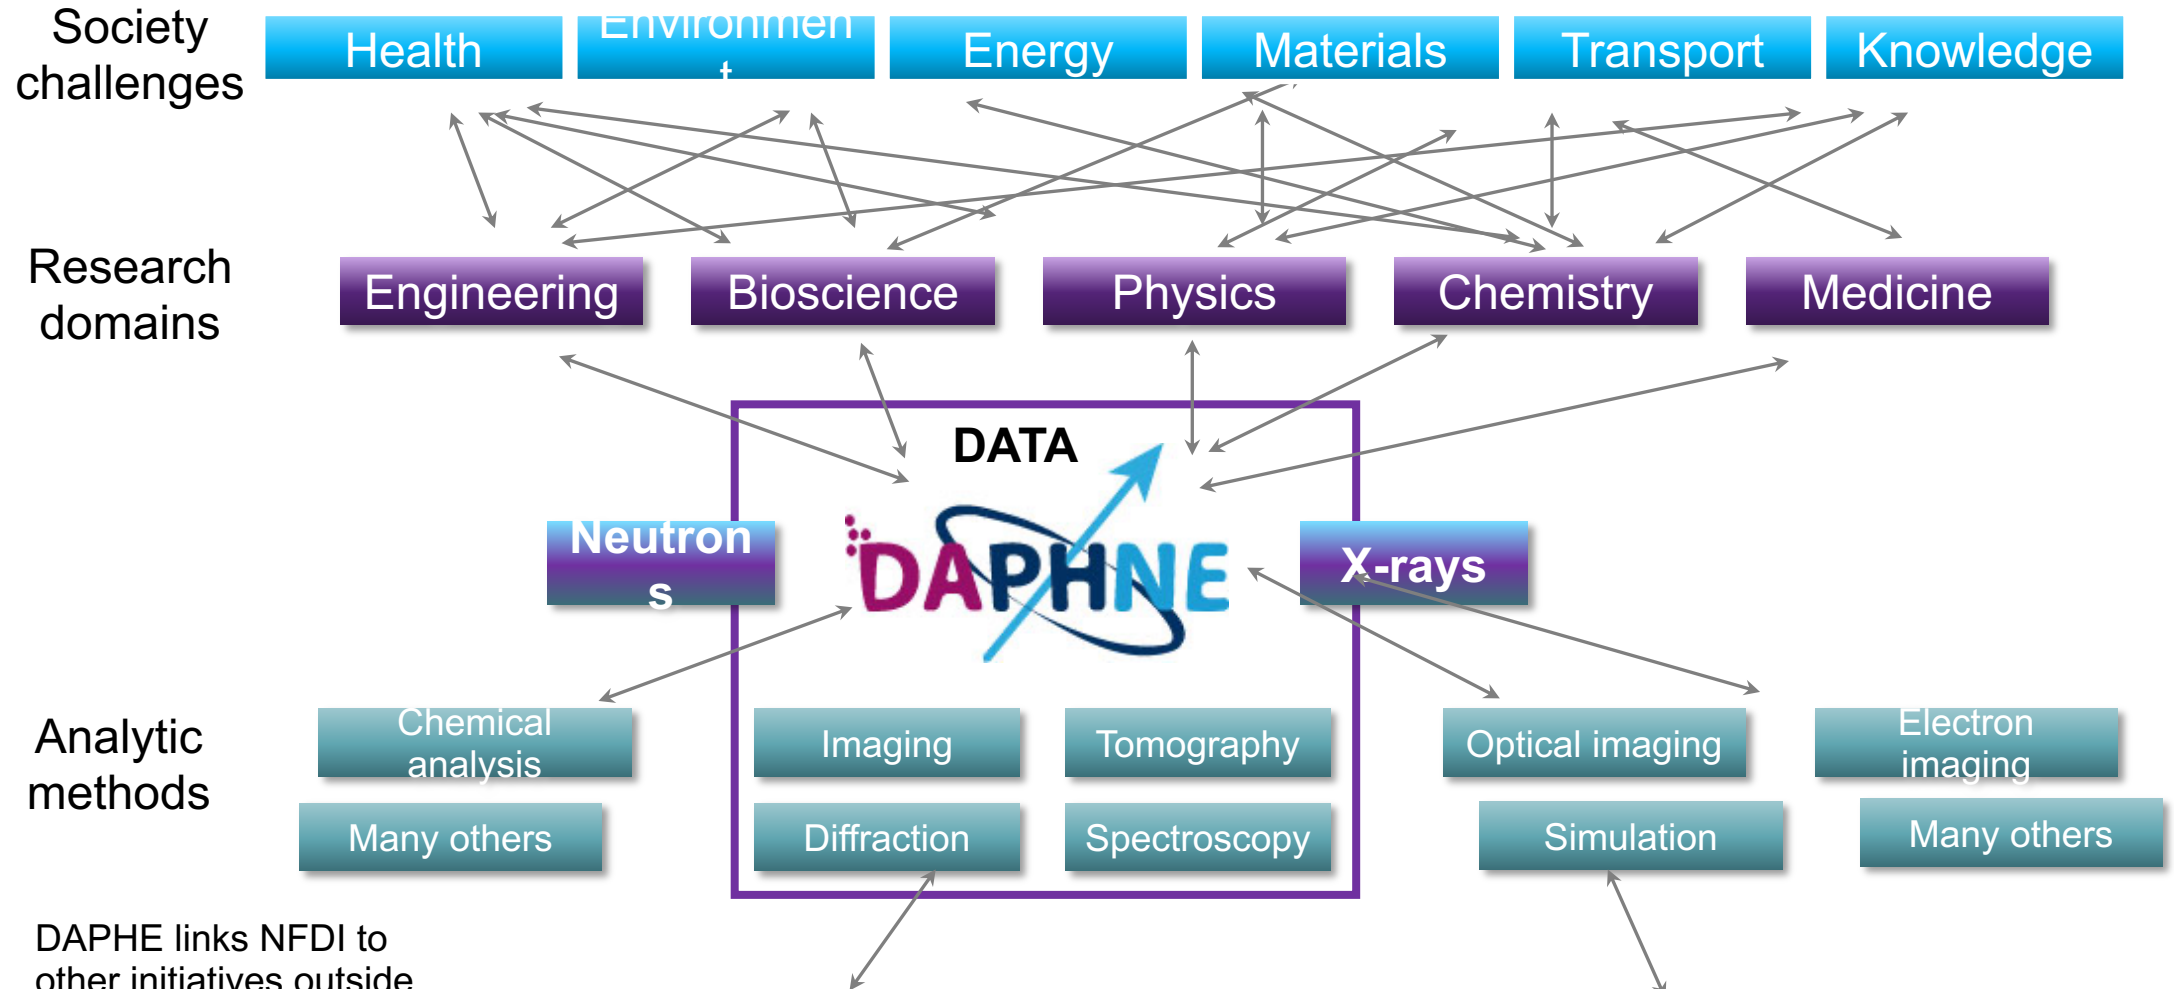

250 patents
In Europe

A collection of small circular icons representing various scientific and technological fields: a smartphone, a heart rate monitor, a pill, a battery, a person, a solar panel, and a hydrogen fuel cell.

Our research community impacts on global challenges

Impact extends far beyond the physics or materials science community

DAPHNE links NFDI to other initiatives outside

The research data life cycle

Proposal

TA1: Managing data production

Key products:

- Electronic log books
- SampleID database
- Integration to instrumentation

Control software
Data formats

Curate

Validate
Store & Archive

Store

TA2: Data repositories and catalogues

Key products:

- Repositories of raw data and processed data linked to publications
- Searchable catalogues

Access Controlled
or Open Access

Data catalogue

Federated
Searchable
Interlinked
Reuse

Publish
Papers
Patents
Presentations

TA3: Infrastructure for data and software reuse

Key products:

- Sustainable and reusable software ecosystem
- Power user software deployed on facility infrastructure

Core products to focus on

Our deliverables to the community (and NFDI)

Which metadata to harvest, and how?
Community building

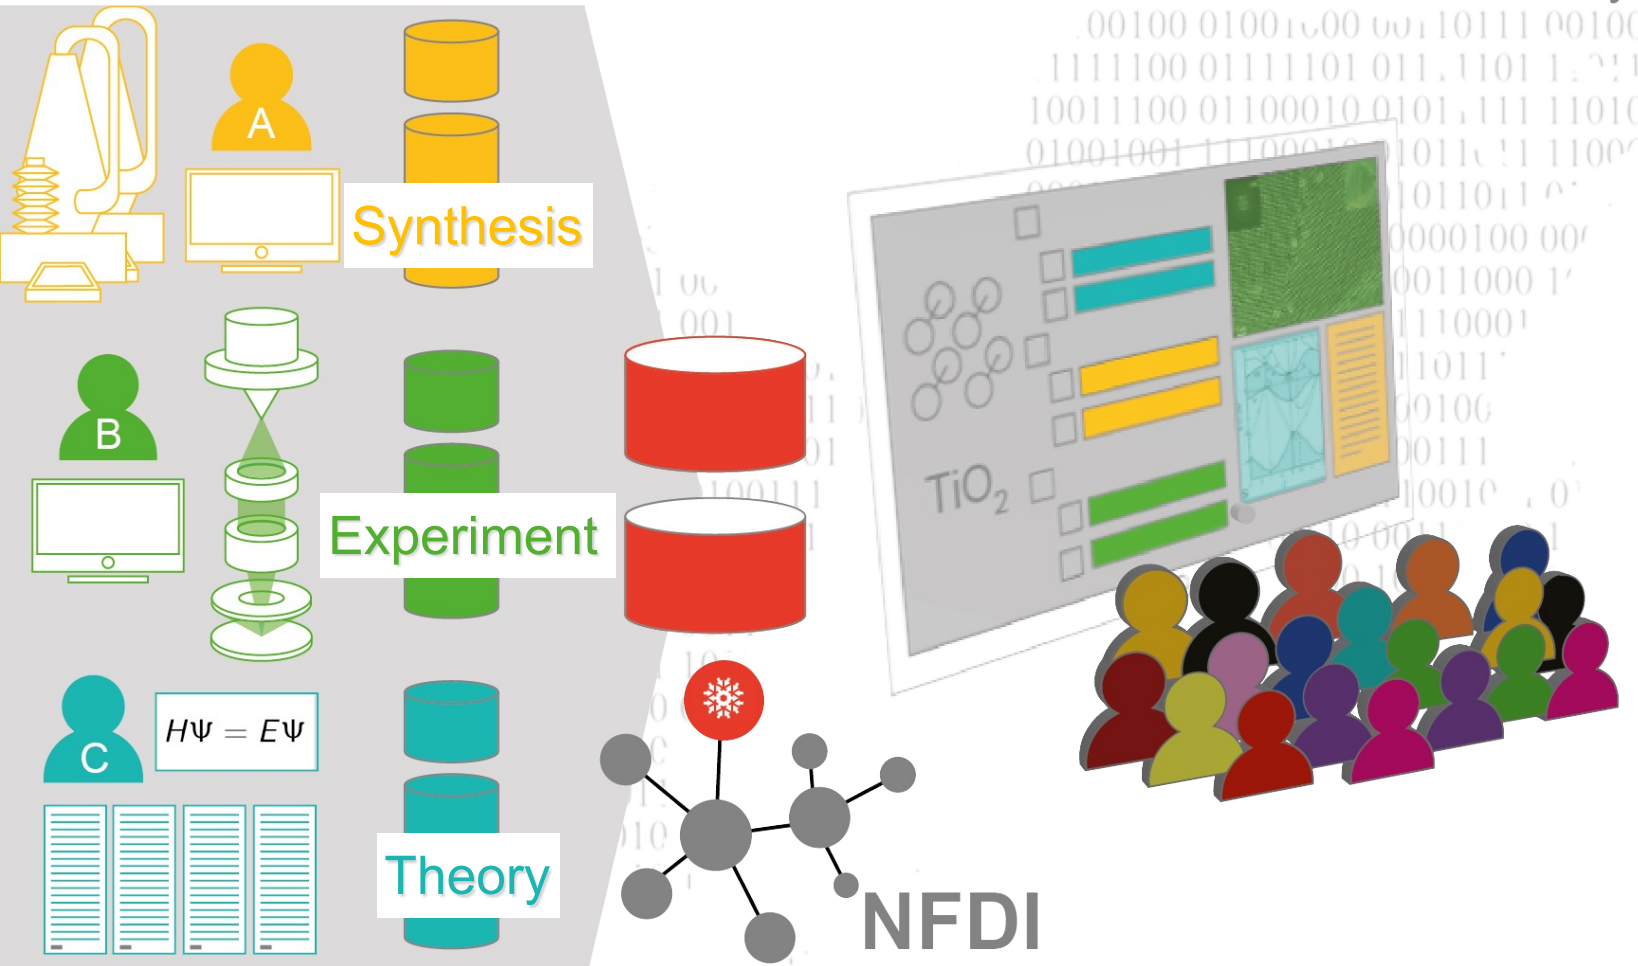

FAIRmat's goal

FAIR Data Infrastructure
for Condensed-Matter Physics
and the Chemical Physics of Solids

Federated data infrastructure

Science → Federated data → Centralized metadata → Aggregated information → Global community

An *inclusive, user-driven* approach to develop easy-to-use tools and an infrastructure towards FAIR data processing, storage, curation, sharing, and AI readiness for future use of materials data

Reproducible growth of materials from various synthesis routes

Do our tools enable us to enhance science in daily life?

Metadata and workflows for the extremely diverse characterization methods used by the community

From voluminous classical simulations to highly sophisticated quantum-mechanical many-body techniques

Do our tools enable us to enhance science in daily life?

Federated data infrastructure for the community

MaRDI: Mathematical Research Data Initiative (Overview)

Mission

Mathematical research data is vast, complex and multifaceted. It emerges within mathematical sciences but also in other scientific areas such as physics, chemistry, life sciences and the Arts.

Standardised formats, data interoperability and application programming interfaces need to be developed to ensure the ease of use of data across broad disciplines.

With this in mind, the Mathematical Research Data Initiative (MaRDI) is being established as **the** consortia initiative of mathematical science. Its mission is to:

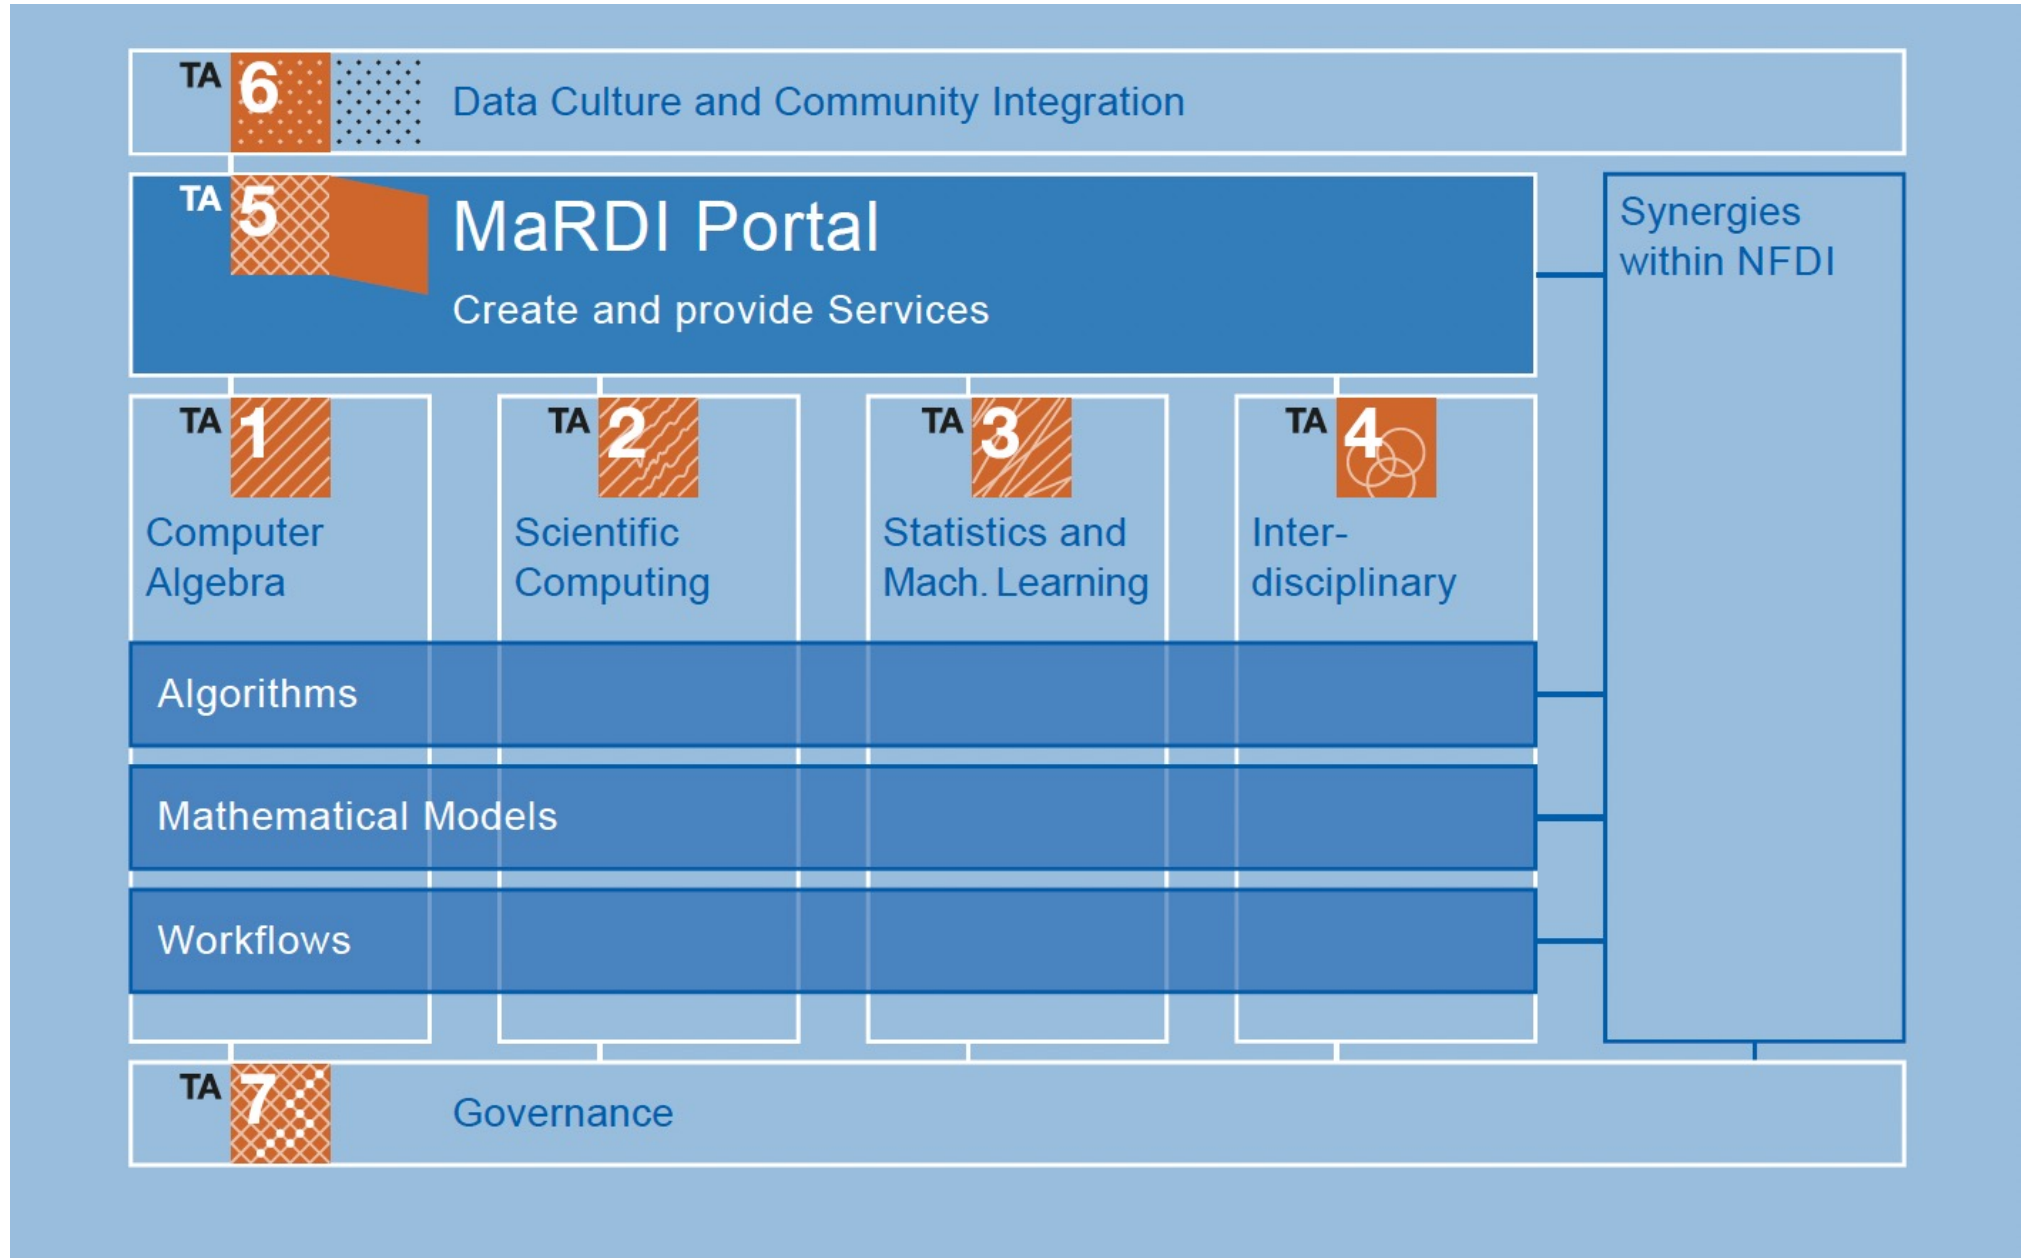

1. develop a robust Mathematical Research Data Infrastructure that would be useful within mathematics and other disciplines as well as non-scientific fields.
2. set standards and confirmable workflows for certified Mathematical Research Data and
3. provide services to both the mathematical and wider scientific community.

All of which is essential in creating and establishing collaborative platforms crucial for knowledge dissemination, quality control and scientific discourse.

MaRDI's Vision:

Building a community that embraces a FAIR data culture and research workflow through the sustainable realization of MaRDI findings.

MaRDI: Mathematical Research Data Initiative (Overview)

MaRDI Layer Architecture for FAIR Data

Example: Linear Solver $Ax=b$

X1: Core

- Data structures for matrices and vectors
- Representation formats
- Exchange formats
- Application programming interfaces (APIs)

X2: Data

- Test cases (matrices, solutions)
- Matrix properties (meta-data)
- Persistent identifiers (PIDs)

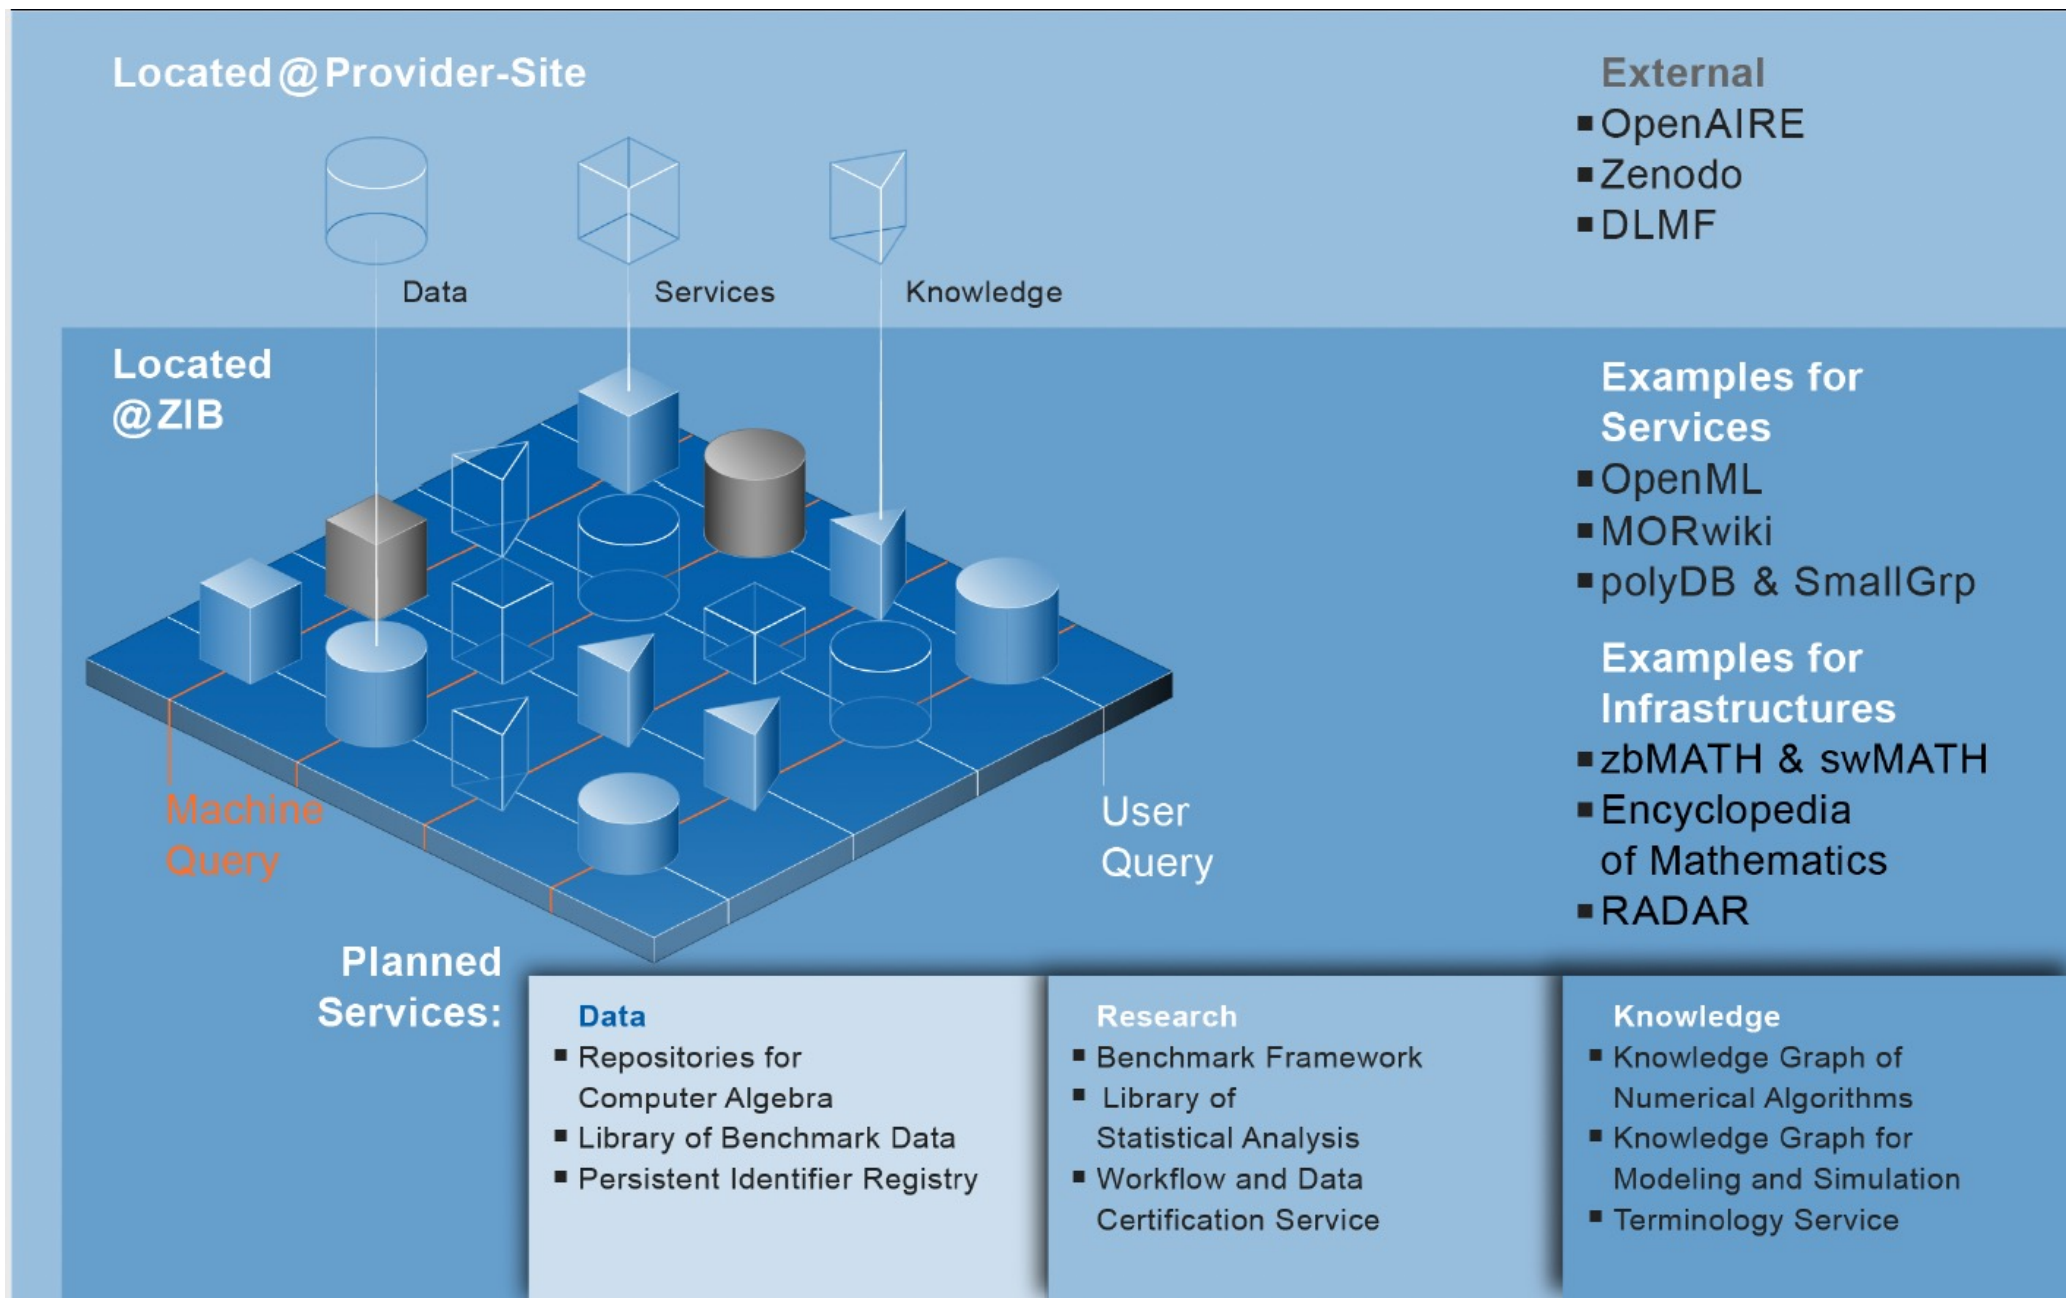

X3: Exchange

- Benchmark framework
- Pre-defined software environments
- Workflows, continuous-benchmarking

X4: Knowledge

- Ontology of linear problems and solvers
- Link to algorithms, publications software and test-data

An Federated Infrastructure and Value-Chain for New Services for Data, Research and Knowledge

**Particles, Universe, NuClei and
Hadrons for the NFDI**
(42 partners, 10k scientists, support
from KET, KAT, KHuK)

The prime goal of PUNCH4NFDI is the setup of a federated and "FAIR" science data platform, offering the infrastructures and interfaces necessary for the access to and use of data and computing resources of the involved communities and beyond.

Cross-Cutting Topics, Sections, Base4NFDI

History

Cross-cutting topics, and Berlin and Leipzig-Berlin declarations

September 2019: Berlin declaration

In the spirit of our common interest to build what could become an international beacon for sharing the benefits of high-quality research data and research data management, the signing NFDI consortia strongly support the idea that NFDI must build on a coordinated and inclusive effort fostering the FAIR data principles. Recalling the challenges that interoperability and sharing of data faces, the 21 consortia signing this declaration agreed on a common list of cross-cutting topics.

July 2020: Leipzig-Berlin declaration

Leipzig-Berlin-Erklärung zu NFDI-Querschnittsthemen der Infrastrukturentwicklung

 Maik Bierwirth;  Frank Oliver Glöckner;  Christian Grimm;  Sonja Schimmler; Franziska Boehm;  Christian Busse;  Andreas Degkwitz;  Oliver Koepler;  Heike Neuroth

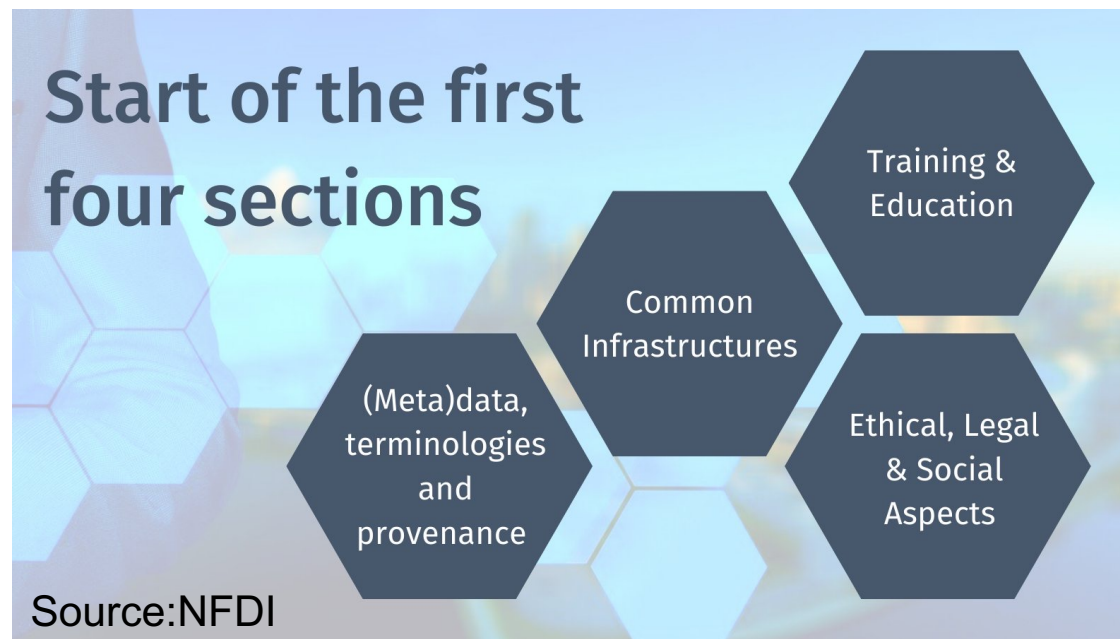

Für den wissenschaftsgeleiteten Aufbau der Nationalen Forschungsdaten-Infrastruktur (NFDI) muss sich die Infrastruktur gemeinsam mit der Forschung weiterentwickeln. Die dafür notwendigen, wechselseitigen Abstimmungen müssen auf Basis tragfähiger Prozesse und Strukturen sichergestellt werden. Themen, die für mehrere Fachkonsortien relevant sind, müssen im Sinne einer nachhaltigen Funktionalität kooperativ und über einzelne Konsortien hinweg bearbeitet werden. Dieses Dokument identifiziert solche Querschnittsthemen und Wege zu ihrer Bearbeitung in der NFDI.

Sections...

Collaboration towards the goals of the NFDI

Although the individual NFDI [consortia](#) are dedicated to research data management in a wide variety of disciplines, such as the natural, cultural and social sciences, they have many topics in common. Sections are legally dependent departments of the [NFDI Association](#) in which these cross-sectional topics are worked on across the boundaries of the consortia.

Cross-cutting issues are identified and prioritised with representatives of the consortia. The strategy-led process, initiated by the NFDI Directorate and the NFDI Consortium Assembly, can lead to the establishment of sections. In the sections, the association members work together to develop cross-consortium standards, metadata standards and formats.

DFG Call

For base service consortia

Information for Researchers No. 8 National Research Data NFDI-wide Basic Services

Supplement to the third round of

In November 2018, the Federal Government initiated the National Research Data Infrastructure (NFDI) project to systematically index, secure in time and national borders in accordance with the requirements of the academic community, the NFDI consortia acting on their own initiative. In the third round of proposals, the Deutsche Forschungsgemeinschaft (DFG) invites proposals for funding to support

- Subject-specific and methodological consortia themselves cannot provide the requested basic service(s) on a long-term basis and, in particular, they are unable to do so for potentially all consortia.
- Basic service initiatives must be closely aligned with the shared needs of the subject-specific consortia, and this needs orientation must be appropriately demonstrated in the proposal.
- In principle, all consortia have an interest in using the basic service; this must be shown with the proposal. The actual use of a basic service in subject-specific and methodological consortia can vary over time, as can the contributions of individual consortia to a basic service. Unless services are intended for all NFDI consortia as a matter of principle, however, they cannot be funded as basic services.
- Basic service initiatives must develop their technical solutions by means of a process that is supported by the subject-specific and methodological consortia and they must ensure acceptance by the consortia. This process of negotiation is fundamental to a basic service initiative: it must be carried out in advance of proposal submission based on a basic service needs assessment and must be documented in the proposal. This process has to be continued on an ongoing basis over the course of the project in order to meet changing needs; plans to this effect are to be presented in the proposal.

21 March 2022: “Letter of Intent” Deadline

For proposals for base service consortia

Only one Lol was handed in to the DFG – carried by all 19 funded consortia and almost all applicants for the third round: Base4NFDI

(One of the logo options)

Basic idea: Base4NFDI is NOT (in the first place) a provider of a specific base service but

- gives a framework for the identification and integration of base services,
- provides flex funds for the “scouting” and (maybe) prototypical implementations of certain base services,
- collaborates closely with the section in identifying candidate services, and
- is fully integrated into the decision structures (senate, consortium assembly) of the NFDI Association that contribute to the decisions.

Currently: Writing of proposal with deadline 29 April. Decision together with 3rd-round consortia in November. Expectation (?): Funding at the order of 1 or 2 scientific consortia.

Base4NFDI Setup

TA1 Requirements, Design and Development

Sehr viele BD-Kandidaten aus Sektionen zu erwarten, Gewährleistung der Auswahlkriterien | Sicherstellung guter Bedingungen für Initialisierung, enge Rückbindung an Sektionen, Ressourcen für Unterstützung der Sektionen

TA2 Integration and Implementing Operational Services

Ausgewählte BD-Kandidaten werden mit bestehenden Infrastrukturen in den Communities integriert (insb. Service Scouts) und im Erfolgsfall für den Dauerbetrieb vorbereitet, enge Rückbindung an Sektionen

TA3 Service Negotiation, Development Process Coordination

Definition und Durchführung Auswahlprozesse, externe Begutachtung, Verhandlung mit Stakeholdern

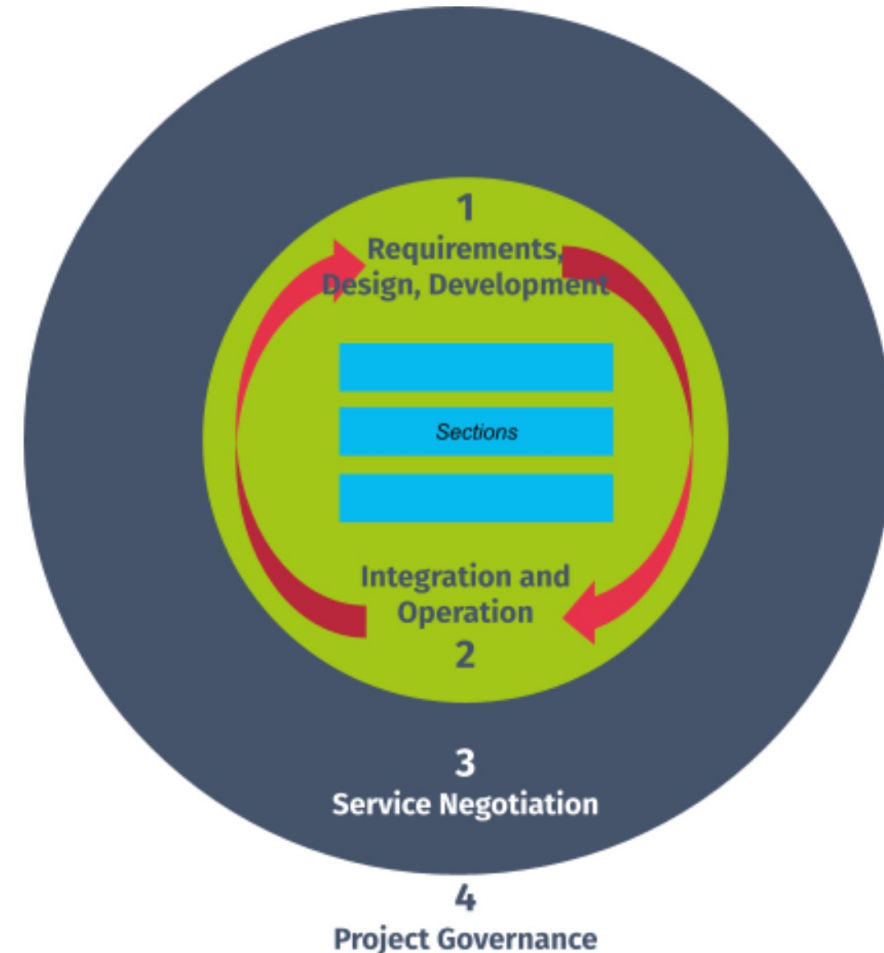

TA4 Project Governance

Basic Services Board <> CTO, Netzwerke auch außerhalb der NFDI, Evaluation Prozesse und Begleitforschung, Outreach und PR, Administration

Regine Stein (Uni Göttingen), **Lars Bernard** (TU Dresden), **Bernhard Miller** (Leibniz)

Geistes-/Sozialwissenschaften - Naturwissenschaften

Conclusions

Conclusions

Very similar goals in the consortia; partly overlapping methods, and increasingly use of the same infrastructures

Work programmes of scientific consortia is a starting point, addressing numerous discipline-specific aspects

The true (potential) power of the NFDI emerges from

- the true embedding of the consortia into their communities
- the effective use of existing (infra)structures
- the cross-cutting collaboration between all NFDI consortia

Today try to explore connections

- between physics-related and other consortia
- between NFDI and ErUM
- between (parts of) NFDI and (parts of) Helmholtz
- ...?

Thank you!

The PUNCH4NFDI Consortium
