## A TES for ALPS II and further dark matter searches

*Wednesday, 28 September 2022 14:30 (15 minutes)*

Transition Edge Sensors (TES) are superconducting microcalorimeters that can be used for single-photon detection at extremely low backgrounds. When they are within their superconducting transition region ( $\sim 80$  mK for the TES in this work) small temperature fluctuations - like the energy deposited by single photons - lead to large variations in resistance. These variations can be measured using Superconducting Quantum Interference Devices (SQUIDs). This exciting technology will be used as a single-photon detector for the upcoming ALPS II experiment, a light-shining-through-walls experiment at DESY Hamburg, searching for Axion-Like Particles (ALPs), which are possible Dark Matter (DM) candidates. At ALPS II the detector needs to detect single photons with a wavelength of 1064 nm at a rate of  $\sim 10^{-5}$  Hz leading to very stringent dark count requirements. Therefore, the main challenges in commissioning a TES for ALPS II involve determining and increasing its detection efficiency and reducing dark counts as well as backgrounds introduced by e.g. black-body radiation. Due to the very low dark count rates in our setup, our TES system might be viable for direct DM searches at sub-MeV masses using electron-scattering of DM in the superconducting material, as well. In this talk, the commissioning of a TES for the ALPS II experiment will be discussed, followed by an outlook on the possible application of TESs as detectors for direct DM searches.

**Primary author:** SCHWEMMBAUER, Christina (ALPS (ALPS \_ Any Light Particle Search))

**Co-authors:** LINDNER, Axel (ALPS (ALPS \_ Any Light Particle Search)); JANUSCHEK, Friederike (DESY); OTHMAN, Gulden (UNI/EXP (Uni Hamburg, Institut für Experimentalphysik)); RUBIERA GIMENO, Jose Alejandro (ALPS); ISLEIF, Katharina-Sophie (HSU (Helmut-Schmidt-Universität), DESY); MEYER, Manuel (UNI/EXP (Uni Hamburg, Institut für Experimentalphysik)); SHAH, Rikhav (ALPS (ALPS \_ Any Light Particle Search))

**Presenter:** SCHWEMMBAUER, Christina (ALPS (ALPS \_ Any Light Particle Search))

**Session Classification:** Afternoon session
