A new life for sterile neutrino dark matter after the pandemic

Thursday 29 September 2022 16:30 (15 minutes)

We propose a novel mechanism to generate sterile neutrinos ν_s in the early Universe, by converting ordinary neutrinos ν_{α} in scattering processes $\nu_s \nu_{\alpha} \rightarrow \nu_s \nu_s$. After initial production by oscillations, this leads to an exponential growth in the ν_s abundance. We show that such a production regime naturally occurs for selfinteracting ν_s , and that this opens up significant new parameter space where ν_s make up all of the observed dark matter. Our results provide strong motivation to further push the sensitivity of X-ray line searches, and to improve on constraints from structure formation.

Summary

Primary author: DEPTA, Paul Frederik (Max-Planck-Institut für Kernphysik)

Co-authors: BRINGMANN, Torsten (Oslo University); HUFNAGEL, Marco (ULB); KERSTEN, Joern (University of Bergen); RUDERMAN, Joshua T. (Center for Cosmology and Particle Physics, Department of Physics, New York University); SCHMIDT-HOBERG, Kai (DESY)

Presenter: DEPTA, Paul Frederik (Max-Planck-Institut für Kernphysik)

Session Classification: Parallel Session Thursday Cosmo

Track Classification: Cosmology & Astroparticle Physics
