FCNC, lepton- and baryon number violation in association with top quarks in ATLAS and CMS

Wednesday 23 August 2023 17:30 (20 minutes)

15'+5'

The top quark is hypothesized in many BSM models to have enhanced, non-standard or rare interactions with other SM or BSM particles. This presentation covers the latest CMS direct results in this regard, including the tests of lepton flavor violations and baryon number violations, including FCNC searches.

Collaboration / Activity

CMS
