DAQ for calorimeters

ECAL-Positron
from FCAL Collaboration

- Almost unchanged from the TN
  - Layers probably will be reduced
- Have the readout and DAQ functioning and debugged during beam tests
- Fanout to FLAXE front-end board
- A slide from Dr Jakub Moroń (AGH Krakow)

ECAL-Electron (or ECAL-P)
from CALICE Collaboration

- Status unknown
- *Possibly will use the readout and DAQ provided along with the CALICE ECAL prototype*
  - On-board electronics
  - (64x32) channels x 15 layers
  - Based on EUDAQ

At TAU:

- An unfinished system for cosmic muon test
- Lack of hardware or software supports

FCAL's FireDAQ open-source on GitHub

Plans to partially simplify in this summer
