

### Update on fits with dynamical zmax at NLO

Safura, Ola, Lissa

23.Jun.2022

Uncertainties for dynamical zmax at NLO with two different  $q_0 = 0.5 \& 1.0 \text{ GeV}$ 

# > Our preliminary results for the fit with uncertainty band for two different q0 values

Dynamical Zmax NLO with q <sub>0</sub> = 0.5GeV (Q <sup>2</sup> min=3.5)					
	$\chi^2$	d.o.f	$\chi^2/_{\text{d.o.f}}$		
$\mu_0^2$ =1.9 GeV <sup>2</sup>	1424	1131	1.25		

Dynamical Zmax NLO with $q_0 = 1.0$ GeV (Q <sup>2</sup> min=3.5)					
	$\chi^2$	d.o.f	$\chi^2/_{d.o.f}$		
$\mu_0^2$ =1.9 GeV <sup>2</sup>	1555	1131	1.37		

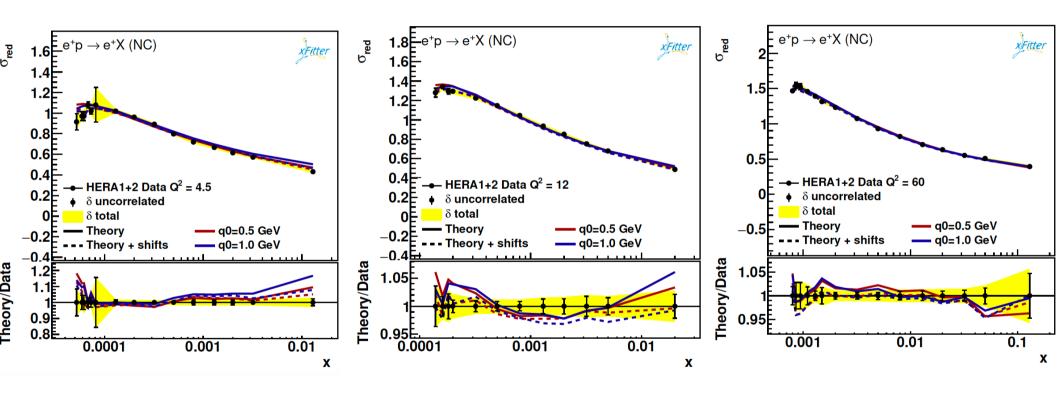

- Uncertainty band includes variation of bottom mass, charm mass and the value of evolution starting scale (QG).
  - The cut that we applied in  $\alpha_s$  is  $q_0 \rightarrow \alpha_s$  ( $q_t >= q_0$ )

Parton densities for different values of the scale  $\mu^2 = Q^2$ . The different choices for q0=0.5 & 1.0GeV are shown. The red band shows the experimental uncertainty, the yellow band the

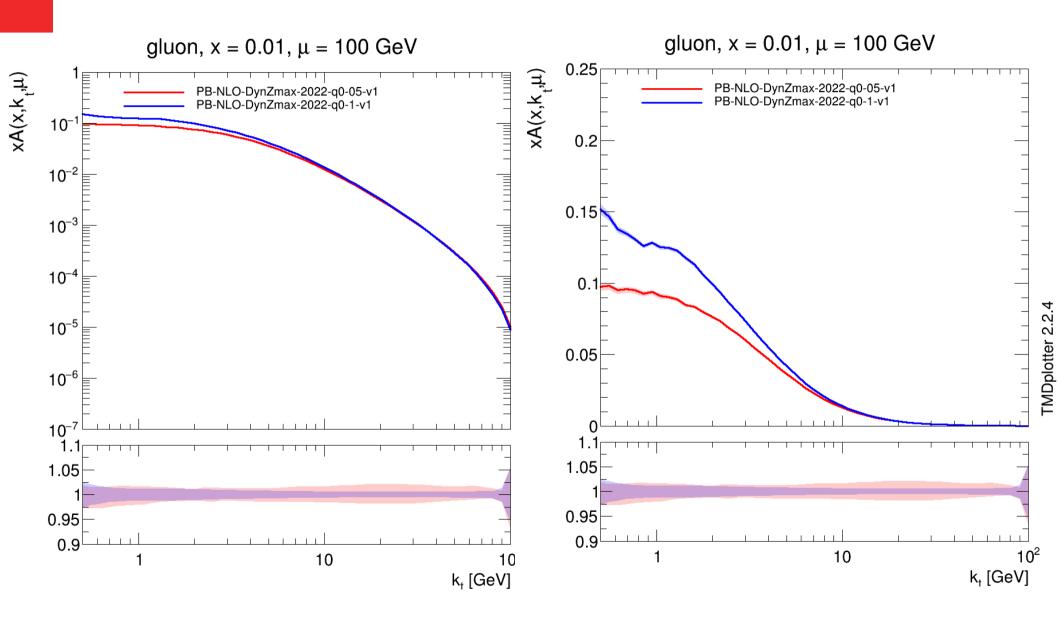

model dependence. х**п**(х,Q²)  $Q^2 = 8317 \text{ GeV}^2$  $Q^2 = 10 \text{ GeV}^2$ xFitter  $Q^2 = 3.0 \text{ GeV}^2$ ₩ q0=1.0 GeV ₩ q0=1.0 GeV ₩ q0=1.0 GeV 0.7 1.4 0.6 1.2 0.5 0.4 0.8 0.3 0.6 0.2 0.4 0.1 0.2 10<sup>-3</sup> 10<sup>-2</sup> 10<sup>-2</sup>  $10^{-1}$ 10<sup>-3</sup>  $10^{-4}$  $10^{-4}$  $10^{-1}$ 10<sup>-3</sup>  $10^{-2}$  $10^{-1}$  $10^{-4}$ X X  $xg(x,\Omega^2)$ **120**F  $Q^2 = 8317 \text{ GeV}^2$  $xg(x,\Omega^2)$ 25- $Q^2 = 10 \text{ GeV}^2$ xFitter  $Q^2 = 3.0 \text{ GeV}^2$ xFitter xFitter ₩ q0=1.0 GeV ₩ q0=1.0 GeV ₩ q0=1.0 GeV 100 20 80 15 60 10 40 20 10<sup>-3</sup> 10<sup>-1</sup>  $10^{-4}$  $10^{-2}$ 10<sup>-2</sup>  $10^{-3}$  $10^{-3}$ 10<sup>-2</sup>  $10^{-1}$  $10^{-4}$ 10<sup>-1</sup>

## Measurement of the reduced cross section obtained at HERA compared to predictions using q0= 0.5 & 1.0 GeV

### TMD Uncertainties plots with q0=0.5 & 1.0 GeV

#### TMD Uncertainties plots with q0=0.5 & 1.0 GeV

#### A few questions in this regard:

1. For obtaining uncertainty band for upper and lower values of QG, should we change these two parameters( Q02 & Q2val) in the steering file as well?

```
! -- 02 values at which the pdfs & errors are done (up to
