Physics Program

Work in Progress

PRC closed session
October 2010

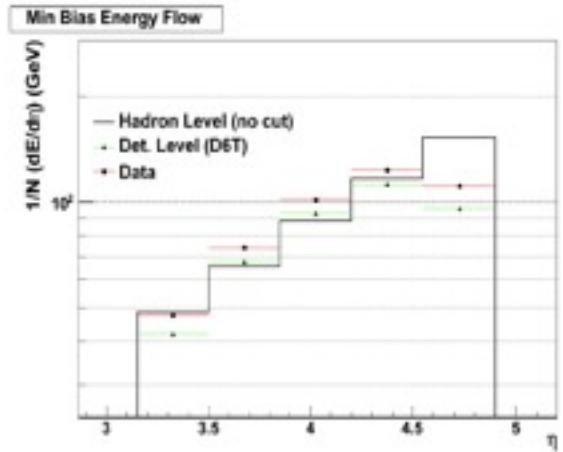

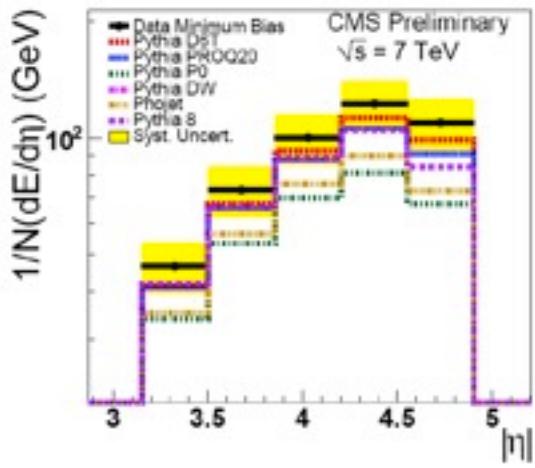

Physics Program

- QCD / Forward Physics
 - Multiparton Interactions / UE
 - QCD at small x
 - Forward energy flow (Preliminary for ICHEP)
 - Hadron-level corrections
- Higgs
 - MSSM Higgs Searches: $H(A) \rightarrow \tau\tau \rightarrow \mu\mu$ (advanced), $H(A) \rightarrow bb$ (starting)
 - $Z \rightarrow \tau\tau \rightarrow \mu\mu$ study as a commissioning phase of the MSSM Higgs analysis $H(A) \rightarrow \tau\tau \rightarrow \mu\mu$
 - B-tagging calibration with top pair production events (input for MSSM $H(A) \rightarrow bb$ analysis)
 - Investigation of strange resonance production in pp collisions (spin-off of tracking performance studies, preliminary for ICHEP)
- Susy
 - Single lepton analyses with μ (advanced) and e (starting), contributing to cross checks of reference analysis in preparation of publication
 - Two lepton analysis with μ and e (same sign and opposite sign)
- Top Quarks
 - Cross section measurement in the di-lepton channels $tt \rightarrow 2W2b \rightarrow \mu\mu 2b$ and $\mu e 2b$ (advanced)
 - bbZ production (with EWK, starting)
 - Top quark mass determination (starting)

Work in Progress (QCD)

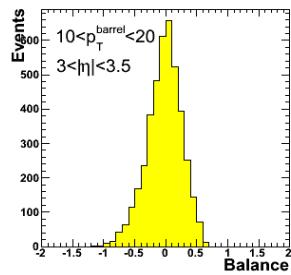

■ Forward energy flow

- measurement of energy flow (ICHEP preliminary)
- now study hadron level corrections, tune MC to better description of this newly measured kinematic regime

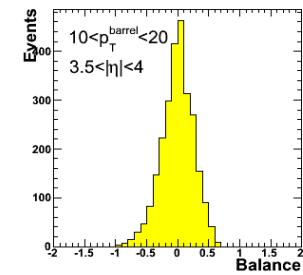

■ Calibration of Castor

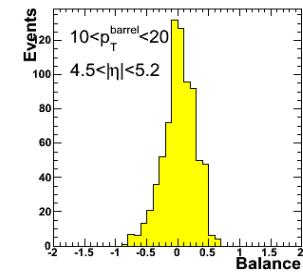

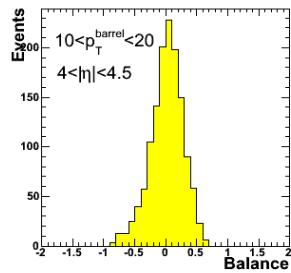

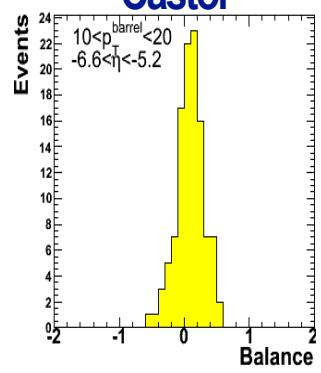

- use pt-balance to calibrate in phi segments
- in parallel intercalibration with halo muons

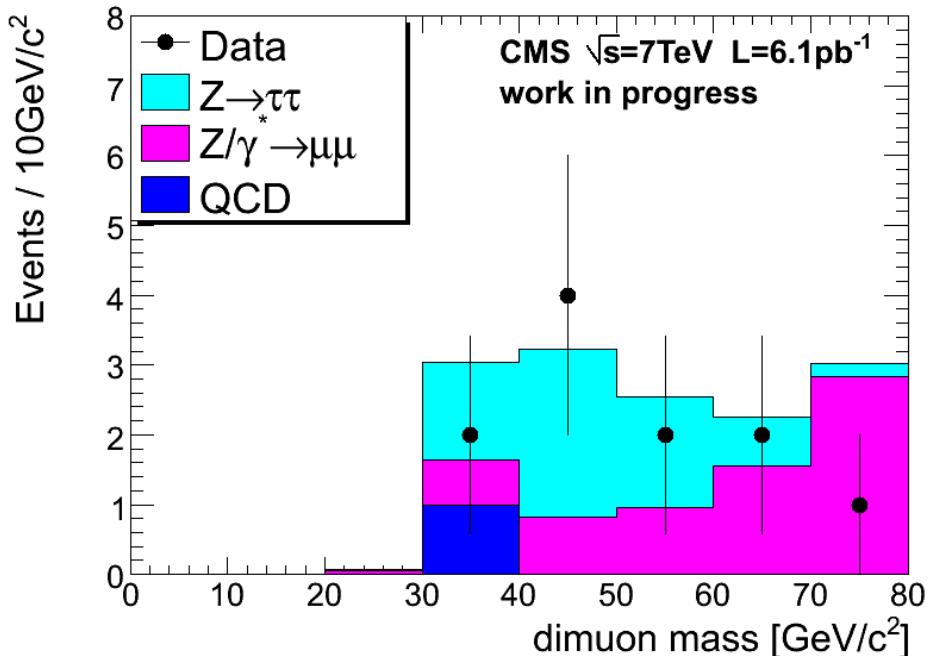

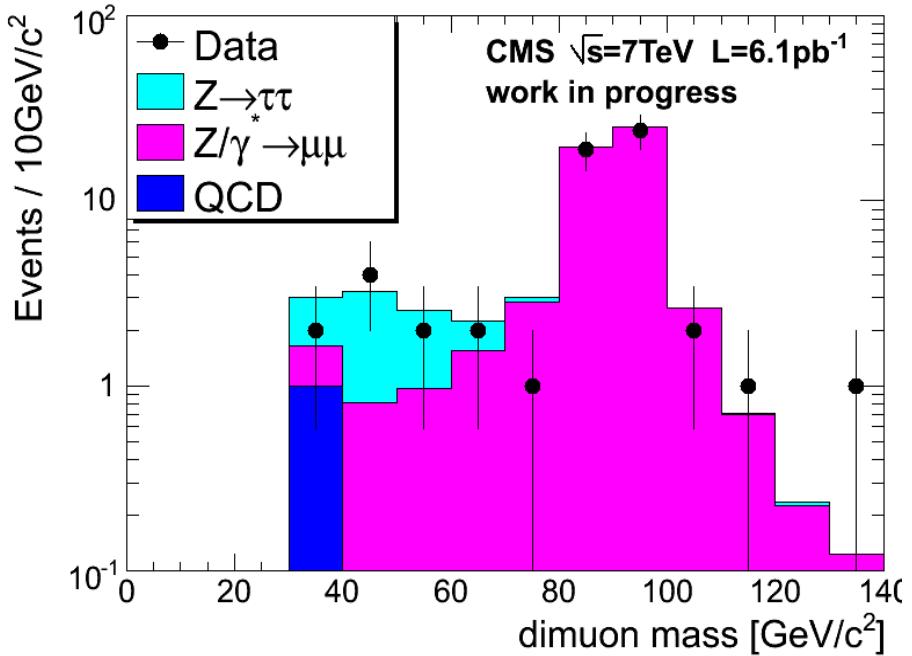

HF

$10 < p_T^{\text{barrel}} < 20 \text{ GeV}$

Work in Progress (Higgs)

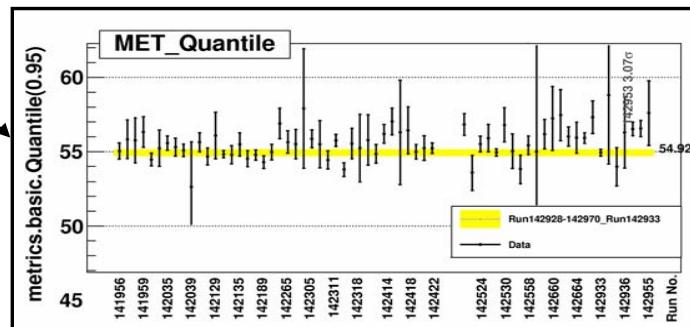

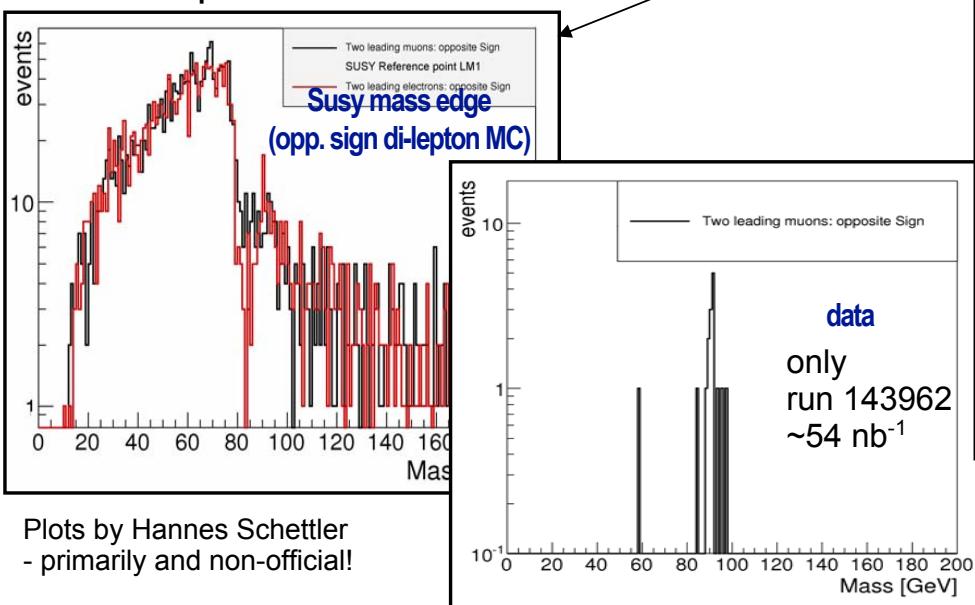

Process	# events	
	Full mass range	$M_{\mu\mu} < 70 \text{ GeV}/c^2$
$Z \rightarrow \tau\tau$	6.38	6.11
$Z/\gamma^* \rightarrow \mu\mu$	55.5	4.02
QCD	1.00	1.00
Total MC	62.9	11.1
Data	59	10

Purity = 55%
Projections for 30 pb⁻¹
 30 signal events
 $S/\sqrt{B} = 6$

Work in Progress (Susy)

- Offline data quality assessment for SUSY group (aka SusyCAF team)
- Reference analyses
 - Single lepton (RA4) synchronization (cross check of analysis chain as preparation for publication)
 - Work on opposite and same sign di-lepton channels

MC [muon channel]

Cut	Num evts			Efficiency (%)			C			
	Finn	Loukas/Georgia*	Robert	Chris	DESY**	Finn	Loukas/Georgia	Robert	Chris	DESY

* the -2% difference observed up to the electron veto is due to the fact that for the **HLT** have NOT been used the REDIGI **TriggerResults**.
 **Niklas, Matthias, Iannis, Dirk

Data [muon channel]

Selection: Exactly one muon, zero electrons, ≥ 2 jets $pT \geq 30$, and $MET > 20$ (MET accessed by `pat::MET=> et()`), where the muon, electron, v4/RECO

Cut	Num evts on run 143962
