Intel® QAT™
Intel® PFR

Advanced Technologies

Intel® AgileX™ FPGA

Hard IP Processor System

- Quad Core ARM64 CPU Subsystem

Next-Generation Architecture

- New Micro-Architecture and 10nm process
- 40% higher performance or 40% lower power

Advanced Network and Memory Options

- Transceiver Tiles 16G, 28G, 32G, 56G, & 116Gbps
- Coherent Processor Attach with Compute Express Link (CXL)
- DDR 4/5, High Bandwidth Memory (HBM)
- Ethernet – 10G, 25G, 50G, 100G, 200G, 400G – Hard IP
- PCIe Gen3, Gen4, and Gen5

Extensive Software Support

- Leading EDGE EDA with Intel® Quartus™ Prime Software
- OneAPI Ecosystem

Secure Device Manager

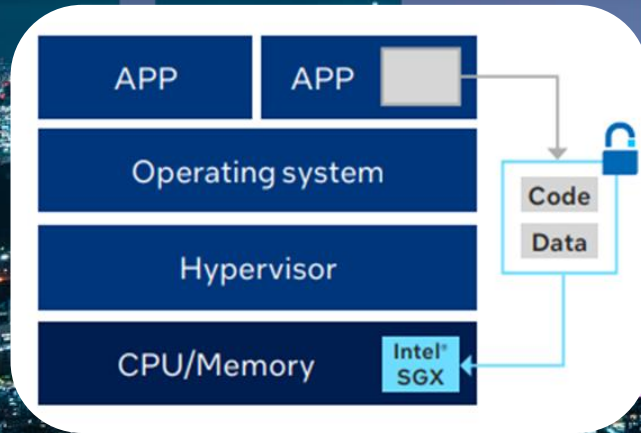

Memory, I/O, & GPIO

- 1.2V GPIO & 1.5V LVDS
- DDR & LPDDR

Security Technologies

Intel® SGX

Intel® QAT™

Intel® PFR

Intel® Software Guard Extension

- Deliver smallest potential attack surface for threat enabled environments providing data security and privacy in any environment
- Up to 1TB protected enclaves for Code and Data
- Protected Offload enclaves to HW accelerators
- Broad software ecosystem support

Intel® Quick Assist Technology™

- Compress or Encrypt Data in Any State
- Up to 100Gbps of symmetric cryptography
- Up to 80K ops/s public key encryption
- Up to 70 Gbps of compression

Intel® Platform Firmware Resiliency

- Protect against permanent denial of service attacks
- Supports Platform Root of Trust and NIST 800-193 industry standards
- Open Solution built on Intel® MAX® 10 FPGAs

Performance varies by use, configuration, and other factors. Learn more at <https://www.intel.com/PerformanceIndex>.
Performance results are based on testing as of dates shown in configurations and may not reflect all publicly available updates.
See configuration disclosure for configuration details.

Intel CPU Technologies

- Maximum Core Count
- Greatest Scalability
- Largest Feature Set
- PCIe Gen5
- IPU
- DDR 4/5
- Large # PCIe Lanes
- Intel® AMX
- Intel® SGX
- Intel® QAT™
- Intel® PFR

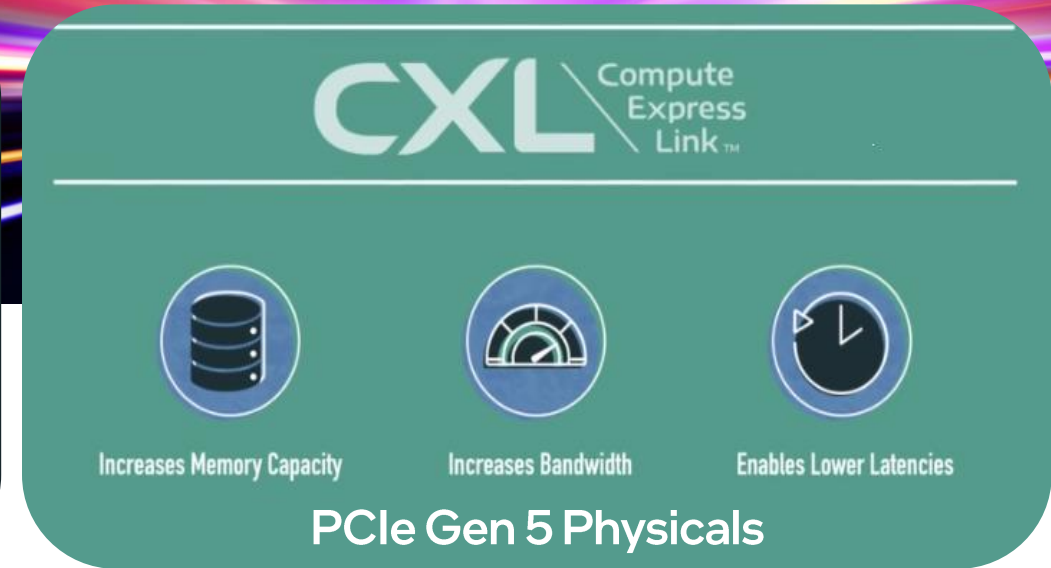

- Optimized Core Count
- Longer Life
- Greater Integration
- PCIe Gen4
- Integrated Ethernet
- DDR 4
- Intel® SGX
- Intel® QAT™
- Intel® PFR

μTCA®
Focused SKU's

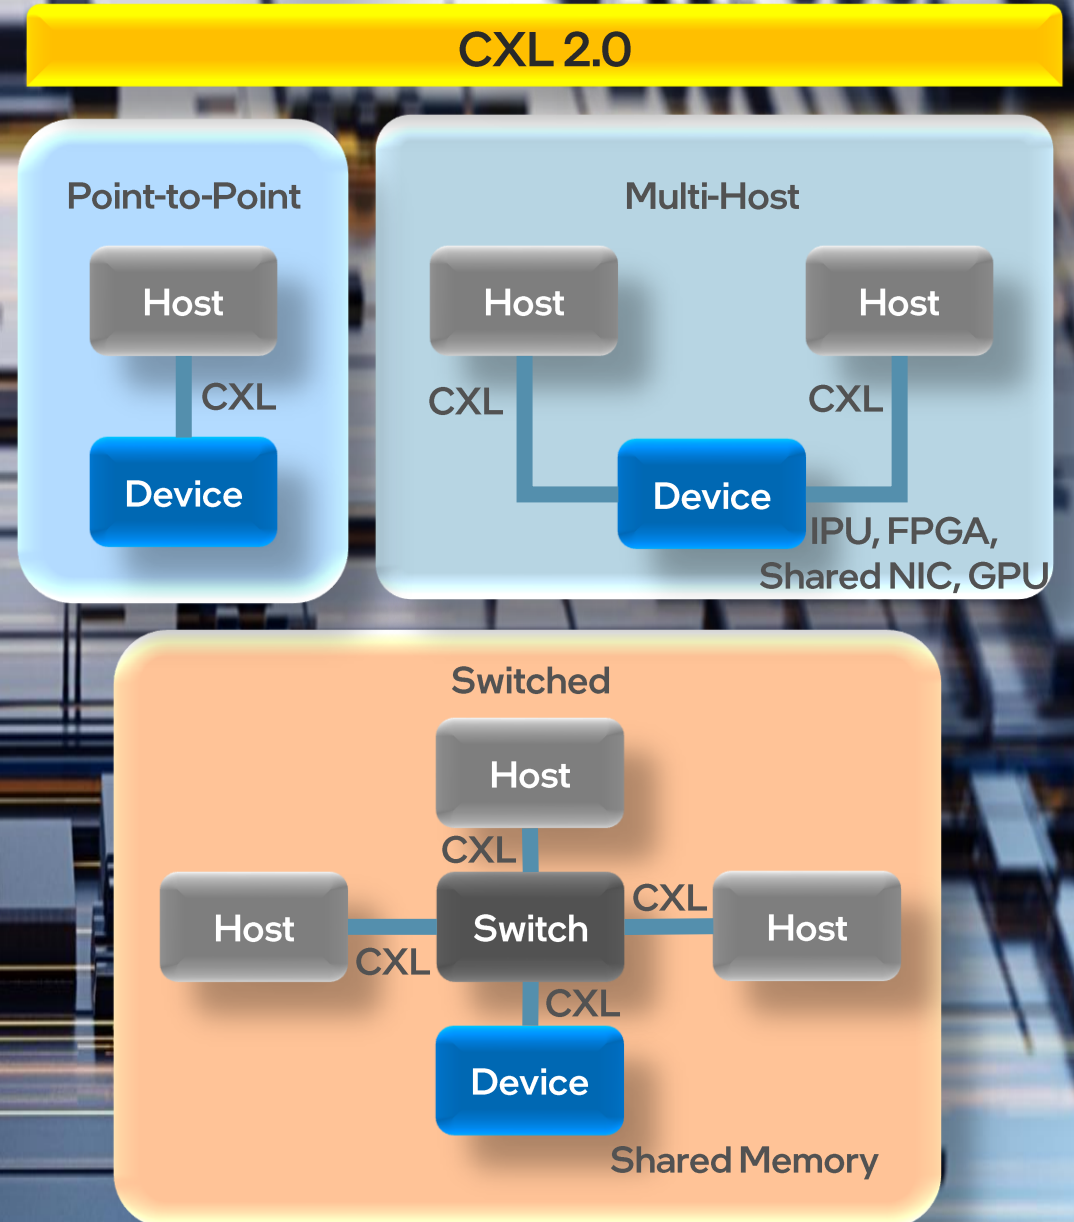

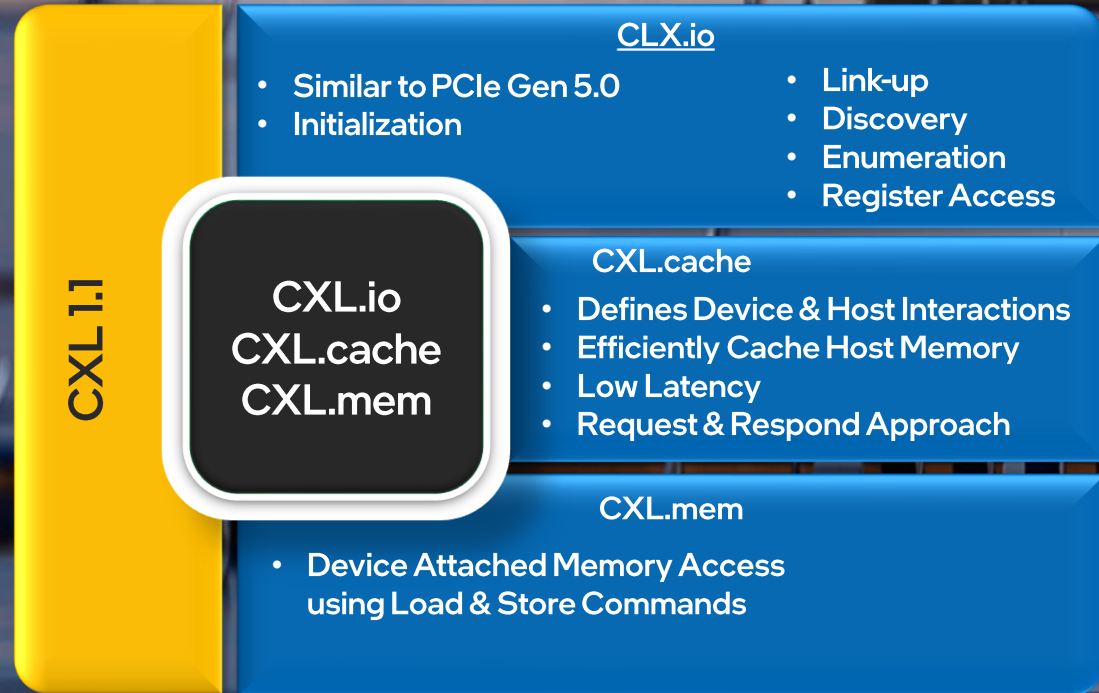

μTCA®
Focused SKU's

- Optimized Core Count
- Power Optimized
- Focused Integration
- Integrated GPU
- Integrated Ethernet
- Intel® QAT

Technology Usage in uTCA[®] Environment

- Lower Latency
- Increased Bandwidth/Performance
- Increased Memory Capacity
- Acceleration
- Fully Coherent Systems
- Security

Key Learnings

- Moore's Law is alive and well driving smaller geometries creating new design challenges such as capping higher I/O voltages
- Component power is increasing creating need for new power delivery & cooling innovation
- Signal integrity on PCBs is increasingly difficult at 100G+ Ethernet and PCIe Gen4+ speeds, creating the need to consider lower loss solutions such as cabling (copper or optical)
- Future computing scale requires radical change driving a need for Hardware Aware Software
- Acceleration for specialized compute workloads like AI, ML, Security offload, etc. is required to achieve future performance needs and these accelerators may come in various forms such as new CPU instructions, FPGAs, IPU, GPUs, Shared Memory via CXL, or other.

Technology is changing faster than ever, and we must be ready to adapt!

Thank You

The Intel logo is centered on a solid blue background. It features the word "intel" in a white, lowercase, sans-serif font. A small, light blue square is positioned above the first vertical stroke of the letter 'i'. To the right of the word "intel" is a small white registered trademark symbol (®).

intel®
