

## PICMG activities status report

*Tuesday 6 December 2022 16:45 (15 minutes)*

PICMG is a nonprofit consortium of companies and organizations that collaboratively develop open standards for high-performance embedded computing applications, including MicroTCA. This presentation will survey the 28 years of open specifications and introduce two new initiatives (ModBlox7 & Far-Edge).

We will discuss the current specifications, our development processes, and the value of PICMG membership. PICMG members benefit by participating in standards development, gaining early access to critical technology, and developing relationships with thought leaders and suppliers in the industry.

**Primary author:** ISQUITH, Jessica (PICMG)

**Presenter:** ISQUITH, Jessica (PICMG)

**Session Classification:** Session 2

**Track Classification:** New Technologies
