Software Upgrades and Controls in Libera Instruments

Tuesday 20 June 2023 10:00 (30 minutes)

Modern instrumentation uses combination of CPU and Operating System which runs the software that supports the underlying hardware components. Hardware typically doesn't change but software components constantly receive functional or security updates. Libera instruments are no exception. This presentation opens discussion on how software updates are managed in the user community and typical issues that come with upgrades. Other topics discuss the alternative control and data collection from the instruments, and hardware upgrade option for Libera Spark.

Summary

Primary author: LEBAN, Peter (Instrumentation Technologies)

Presenter: LEBAN, Peter (Instrumentation Technologies)

Session Classification: Session 3
