

1. preliminary results page

<https://results.punch4nfdi.de/>

Comments: the link is publicly available but does not contain significant content. A clear procedure is required via which PUNCH agrees what is to be published there. Also the difference between results and services needs to be defined

4. internal services collections

<https://intra.punch4nfdi.de/?md=/docs/Marketplace/services/overview.md>

Comments: here an internal collection of PUNCH services is described and documented. These services have already gone through the validation process

2. from a deliverable to a service

<https://intra.punch4nfdi.de/docs/Marketplace/services/from-deliverable-to-service.pdf>

Comments: here the procedure is described how to transform a deliverable coming from a TA into a PUNCH or even NFDI wide service

3. internal results collection in intranet

<https://intra.punch4nfdi.de/?md=/docs/TA6/results.md>

Comments: it has been agreed upon that before results will be made public they first should be collected on an internal results page in intranet. After consense in PUNCH4NFDI selected results can be made public
