# MetaInsight

---

## An LLM-Powered Research Assistant

Mohamed El Ghafiani

- PhD Student, Photonics, Opto-acoustics

LPMR, Faculty of Science, Mohammed First University Oujda Morocco

- Software engineering student at ALx

1st Large Language Models  
in Physics Symposium

LIPS

Hamburg,  
Feb 21 - 23, 2024

# Outline

---

- Problem
- Proposed solution
- Case study - Topological Photonics
- Challenges faced
- Future improvements

# Challenges I faced as A PhD student

---

## Information Overload

Sorting through a vast array of articles left me uncertain about which ones were most relevant or essential to read.

## Grasping Main Findings

Difficulty in distilling key insights from scholarly articles due to complex terminology and methodologies.

## Navigating Research Trends

Difficulty in discerning the most pertinent articles led to significant time investment in understanding current research trends, advancements, and key challenges within the field.

## Idea Validation

I often struggled to validate the feasibility and originality of my research ideas without proper guidance or access to reliable sources for validation.

# Main Features

---

## 1. Topic summarization

- Concise summaries of research topics.
- Distillation of key information from extensive literature.

## 3. Trend analysis

- Identification of emerging themes and methodologies.
- Insightful analysis of research trends within a chosen field.

## 2. Literature retrieval

- Ability to retrieve relevant scholarly literature based on user queries and topics of interest.
- Comprehensive coverage of the latest research developments and findings.

## 4. Research idea evaluator

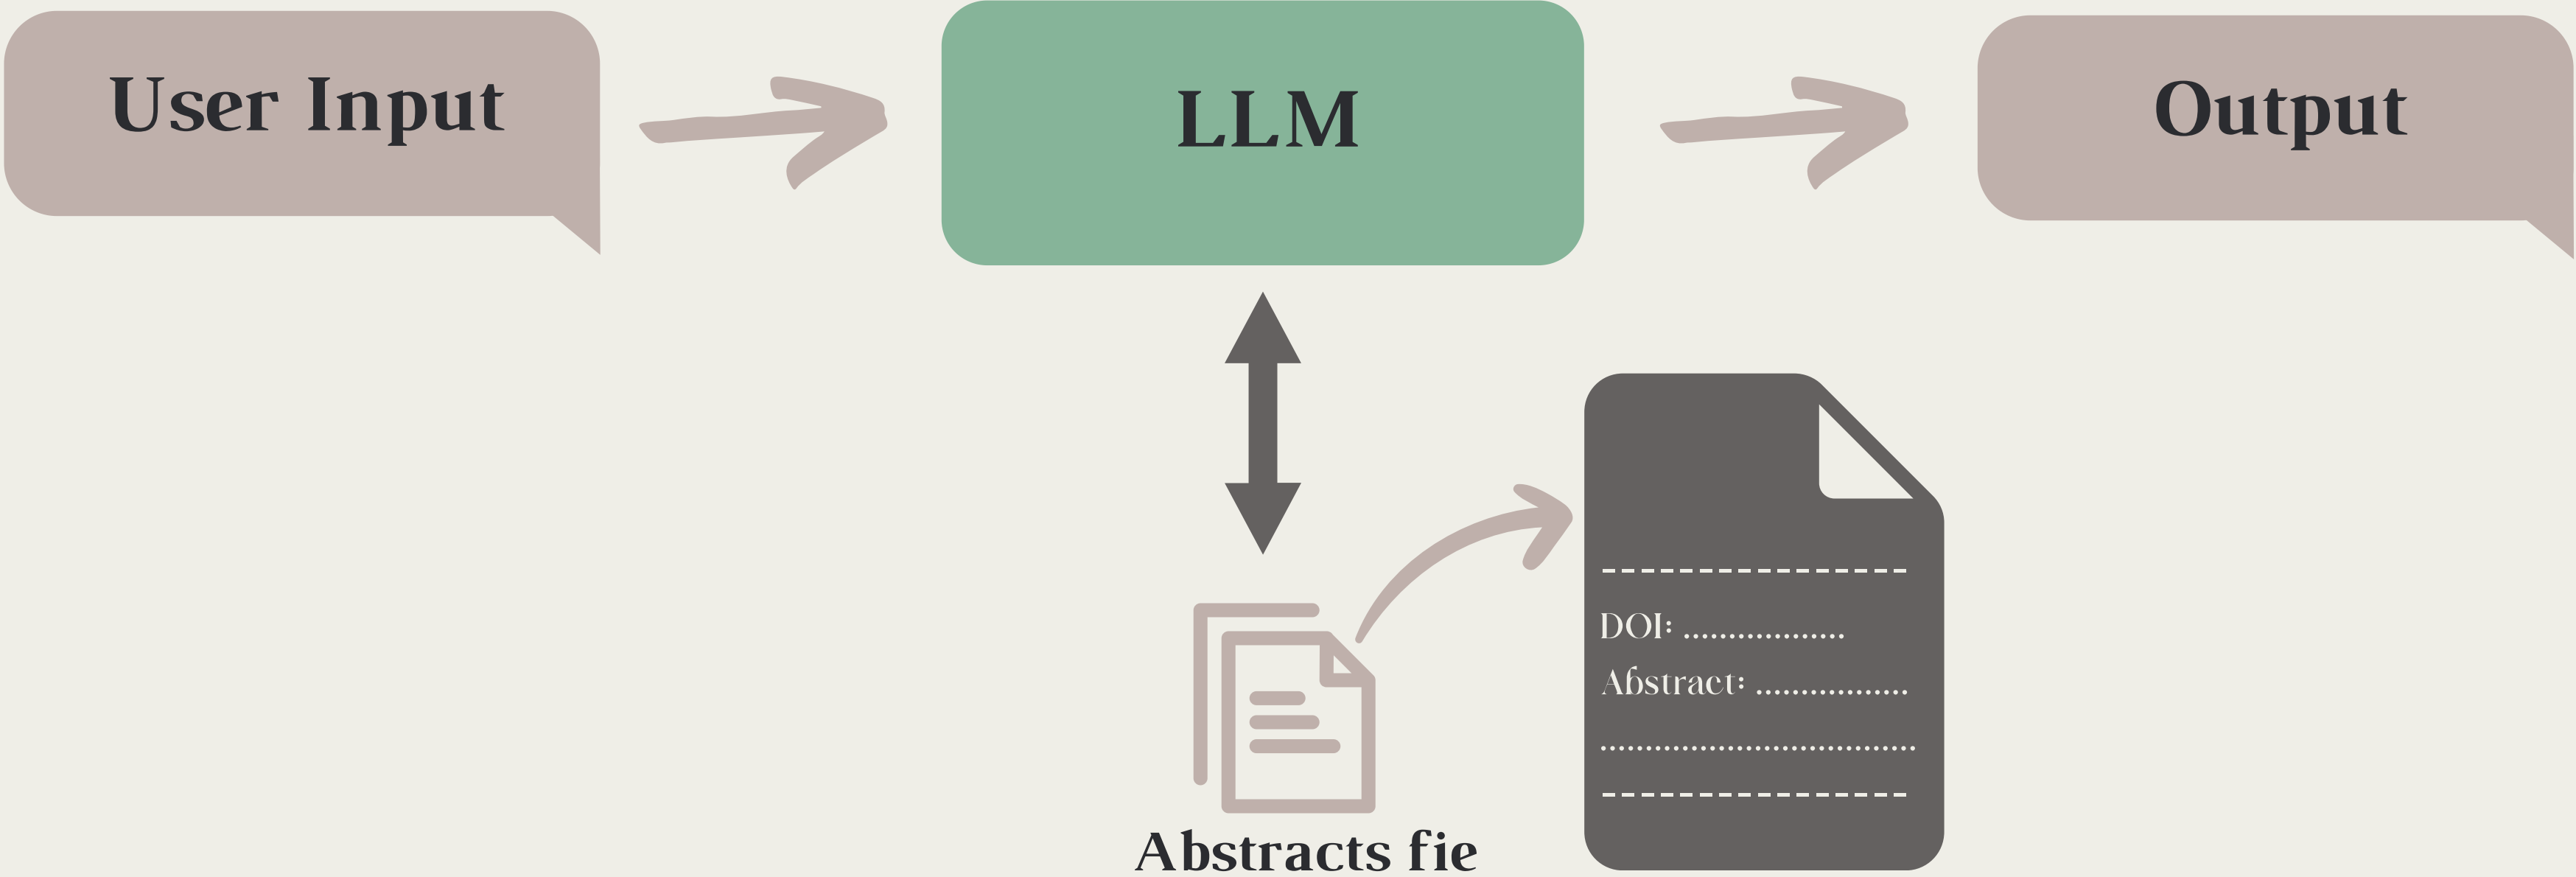

- Rigorous evaluation of research ideas for originality and utility.
- Assessment of difficulty level and resource requirements.

MetaInsight

# General pipeline

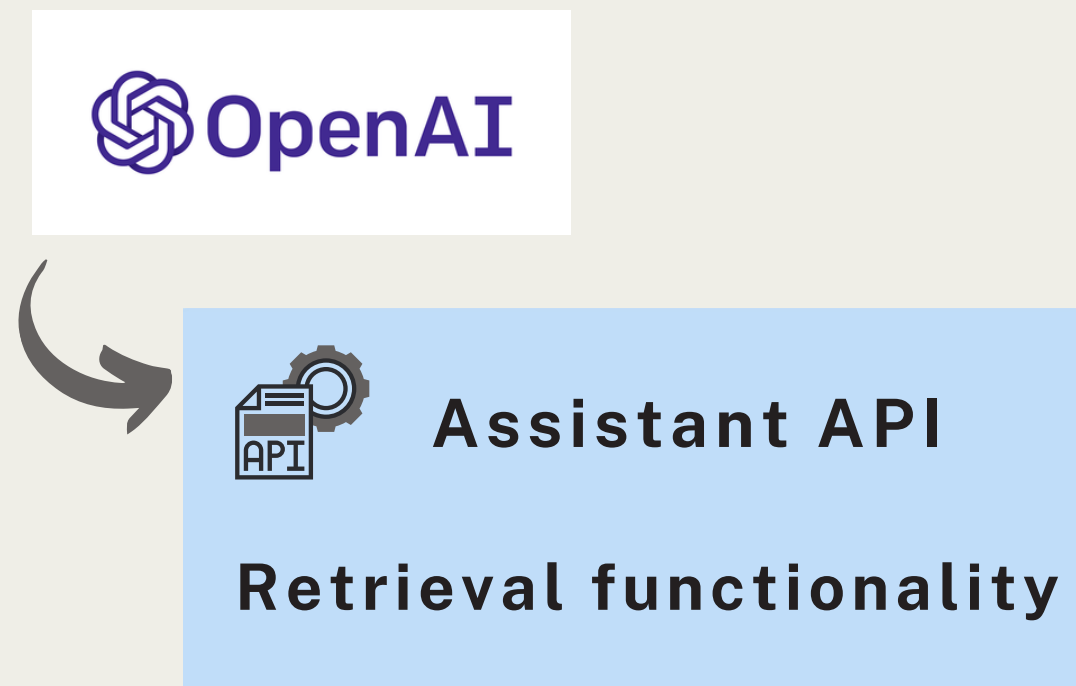

# DEMO- Topological Photonics

1. Assembled all the search results related to the topic of “Topological Photonics”

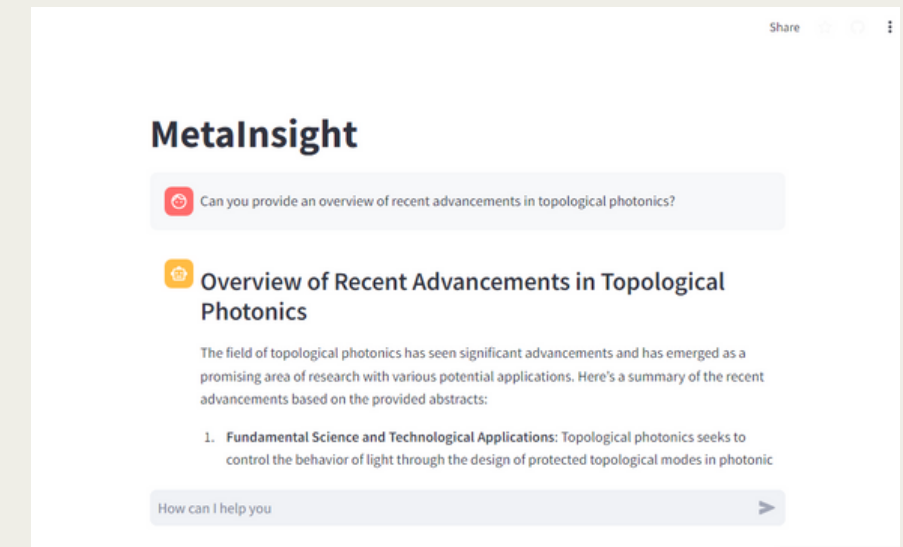

**2347 Abstracts**

2. Used the OpenAI assistant API with the retrieval functionality enabled

3. Built a simple Demo

<https://meta-insight.streamlit.app/>

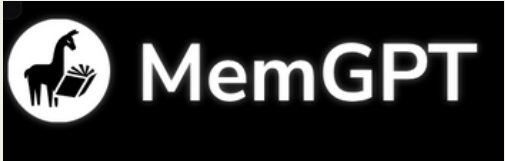

# Challenges & Improvements

---

## Challenges

- Managing effectively the context window of the LLM
- The assistant isn't citing too many articles
- You can't engage in a long conversation before the history of conversations become too long

## Future Improvements

- Integrate memGPT 
- Use a small open source model (e.g., tinyllama, ...) instead of openai api
- Work on validating the pipeline used
- Include full articles, where possible, instead of abstracts only.

# Thank you!
