

10th Anniversary Meeting of the Young Crystallographers

Wednesday 4 October 2023 - Friday 6 October 2023

DESY, Hamburg

Scientific Programme

Lightning Talks and Posters:

The heart of the conference is formed by the contributions of young scientists. All participant will present their work in the form of a poster accompanied by 5-minute presentations.

Academic Talks:

There will be two one-hour-long talks by speakers from academic intuitions:

Dr. Donatella Loru works in the group of Melanie Schnell at DESY. The group develops novel spectroscopic methods for structure determination and the understanding of molecular processes. This complements our otherwise very diffraction-focused program.

Prof. Dr. Tobias Beck is a research group leader at the University of Hamburg. In the past, he has worked on the crystallography of small molecules and the development of methods for protein crystallography. Now his research is focused on crystalline biohybrid materials based on proteins and nanoparticles.

Industry Talks:

The industry talks are not meant to be advertising events for the companies but rather scientific presentations about new instrumentation and methods as well as information about possible career paths for young crystallographers.

So far we have confirmed talks by *X-Spectrum*, *Stoe & Cie*, *Anton Paar* and *Rigaku*.
