Results: CMS_2015_I1384119 (arXiv:1507.05915 [hep-ex])

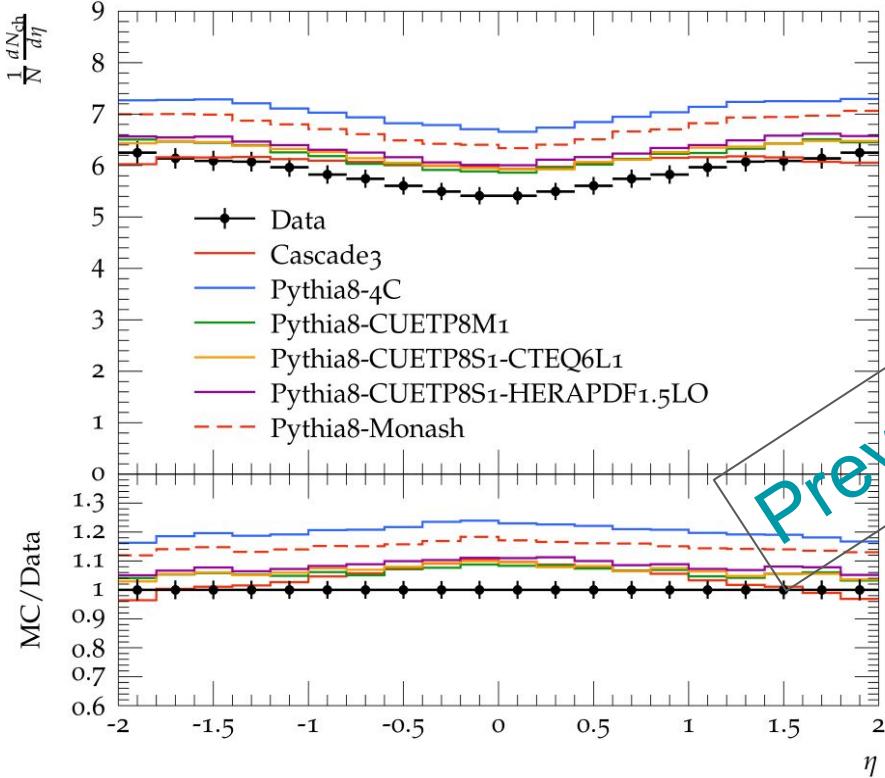

Pseudorapidity distribution of charged hadrons in the region $|\eta| < 2$ in inelastic pp collisions at 13 TeV measured using Cascade3 and different tunes of Pythia8. The results are compared to CMS data at 13 TeV.

Results: CMS_2015_I1380605 (arXiv:1507.00233)

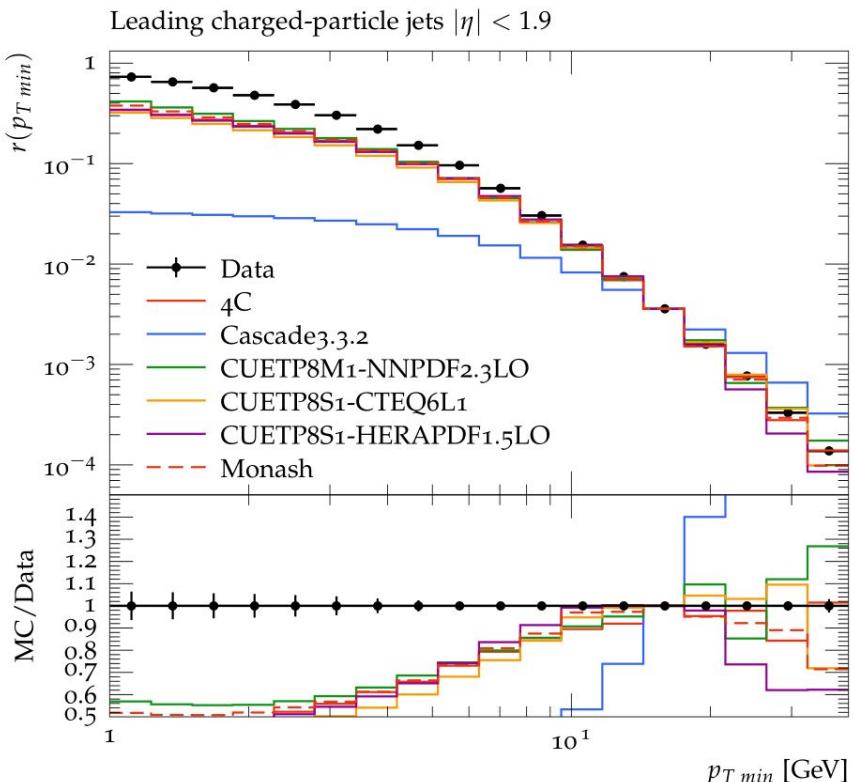

The integrated yield, $r(p_{T\min})$, of events with a leading charged particle within $|\eta| < 2.4$ as a function of $p_{T\min}$ measured using Cascade3 and different tunes of Pythia8. The results are compared to CMS data at 8 TeV.

Results: CMS_2015_I1380605 (arXiv:1507.00233)

The integrated yield, $r(p_{T \text{ min}})$, of events with a leading charged particle within $|\eta| < 1.9$ as a function of $p_{T \text{ min}}$ measured using Cascade3 and different tunes of Pythia8. The results are compared to CMS data at 8 TeV.

Pythia8 tunes:

1. CUETP8M1

- Constructed using the parameters of the Monash Tune and fitting the below parameters to UE data at $\sqrt{s} = 0.9, 1.96, \text{ and } 7 \text{ TeV}$.

Table 3 The PYTHIA8 parameters, tuning range, Monash values [29], and best-fit values for CUETP8M1, obtained from fits to the Trans-MAX and TransMIN charged-particle and p_T^{sum} densities, as defined

by the leading charged-particle p_T^{max} at $\sqrt{s} = 0.9, 1.96, \text{ and } 7 \text{ TeV}$. The $\sqrt{s} = 300 \text{ GeV}$ data are excluded from the fit
