

Technical

- The exercises need to be more explicit
- A greater emphasis on preparing for ILDG
 - I feel prepared to use it, but not yet ready to (commands vs (M) D)
- Searching metadata catalogue remains difficult
 - xquery/xpath is powerful but complicated
 - Try-mdc is great
 - Difficult to tell if search was wrong or found nothing
 - Optional (free) tag based system?
 - Semi-unify via markup tool?

Metadata/markup

- Add ORCID to participant?
- Documentation
 - Web page under construction?
- Hideo's markup tool or equivalent is essential
 - Lowering the barrier to entry is crucial
- Observables in config. XML
 - Plaq already exists, why not more?
 - I.e. Spatial/Temp. Plaq. useful for anisotropic
- Can I add whatever observable to ensemble?
