

## Experiences

- no major obstacles
- searching, validation, upload, download worked
- `try-clients` very useful
- started with ensemble XML template for newest ETMC ensembles, need a new project  
`tmqcd_clover_nf2p1p1!`

## Remarks / Questions

- can the `try-clients` repo be made public for contributing?
- bandwidth / storage space at the computer centres for ILDG?
- how to deal with situations where `screen` sessions are not allowed?
- token based, location independent command launches? (like with XRootD / Rucio)
- library to generate ensemble / configuration XML at generation stage?
