Paper status and publication path

Alberto Martini — DESY Madmax Analysis week, MPP, 24-28 July 2023

Paper structure: proposal

- Madmax analysis paper
 - 01-Introduction.tex
 - 02-MadMax_experiment.tex
 - 03-Calibration_steps.tex
 - 04-Analysis_method.tex
 - 05-Systematics_calculation.tex
 - 06-Limit_extraction.tex
 - 07_Conclusions.tex

Describe the physics concepts and motivation for Madmax

Describe the experiment as it was in 2022-2023 data-taking

Here, details on the geometry should be added

Describe the various measurements that have been done to extract the boost factor

Describe the ADS (+ COMSOL) simulation(s), including the

Describe how we estimated systematic uncertainties, using a combination of measurements and simulations

Describe the statistical framework used to extract the final limit on $g_{a_{\gamma}}$ and how we extract the final result

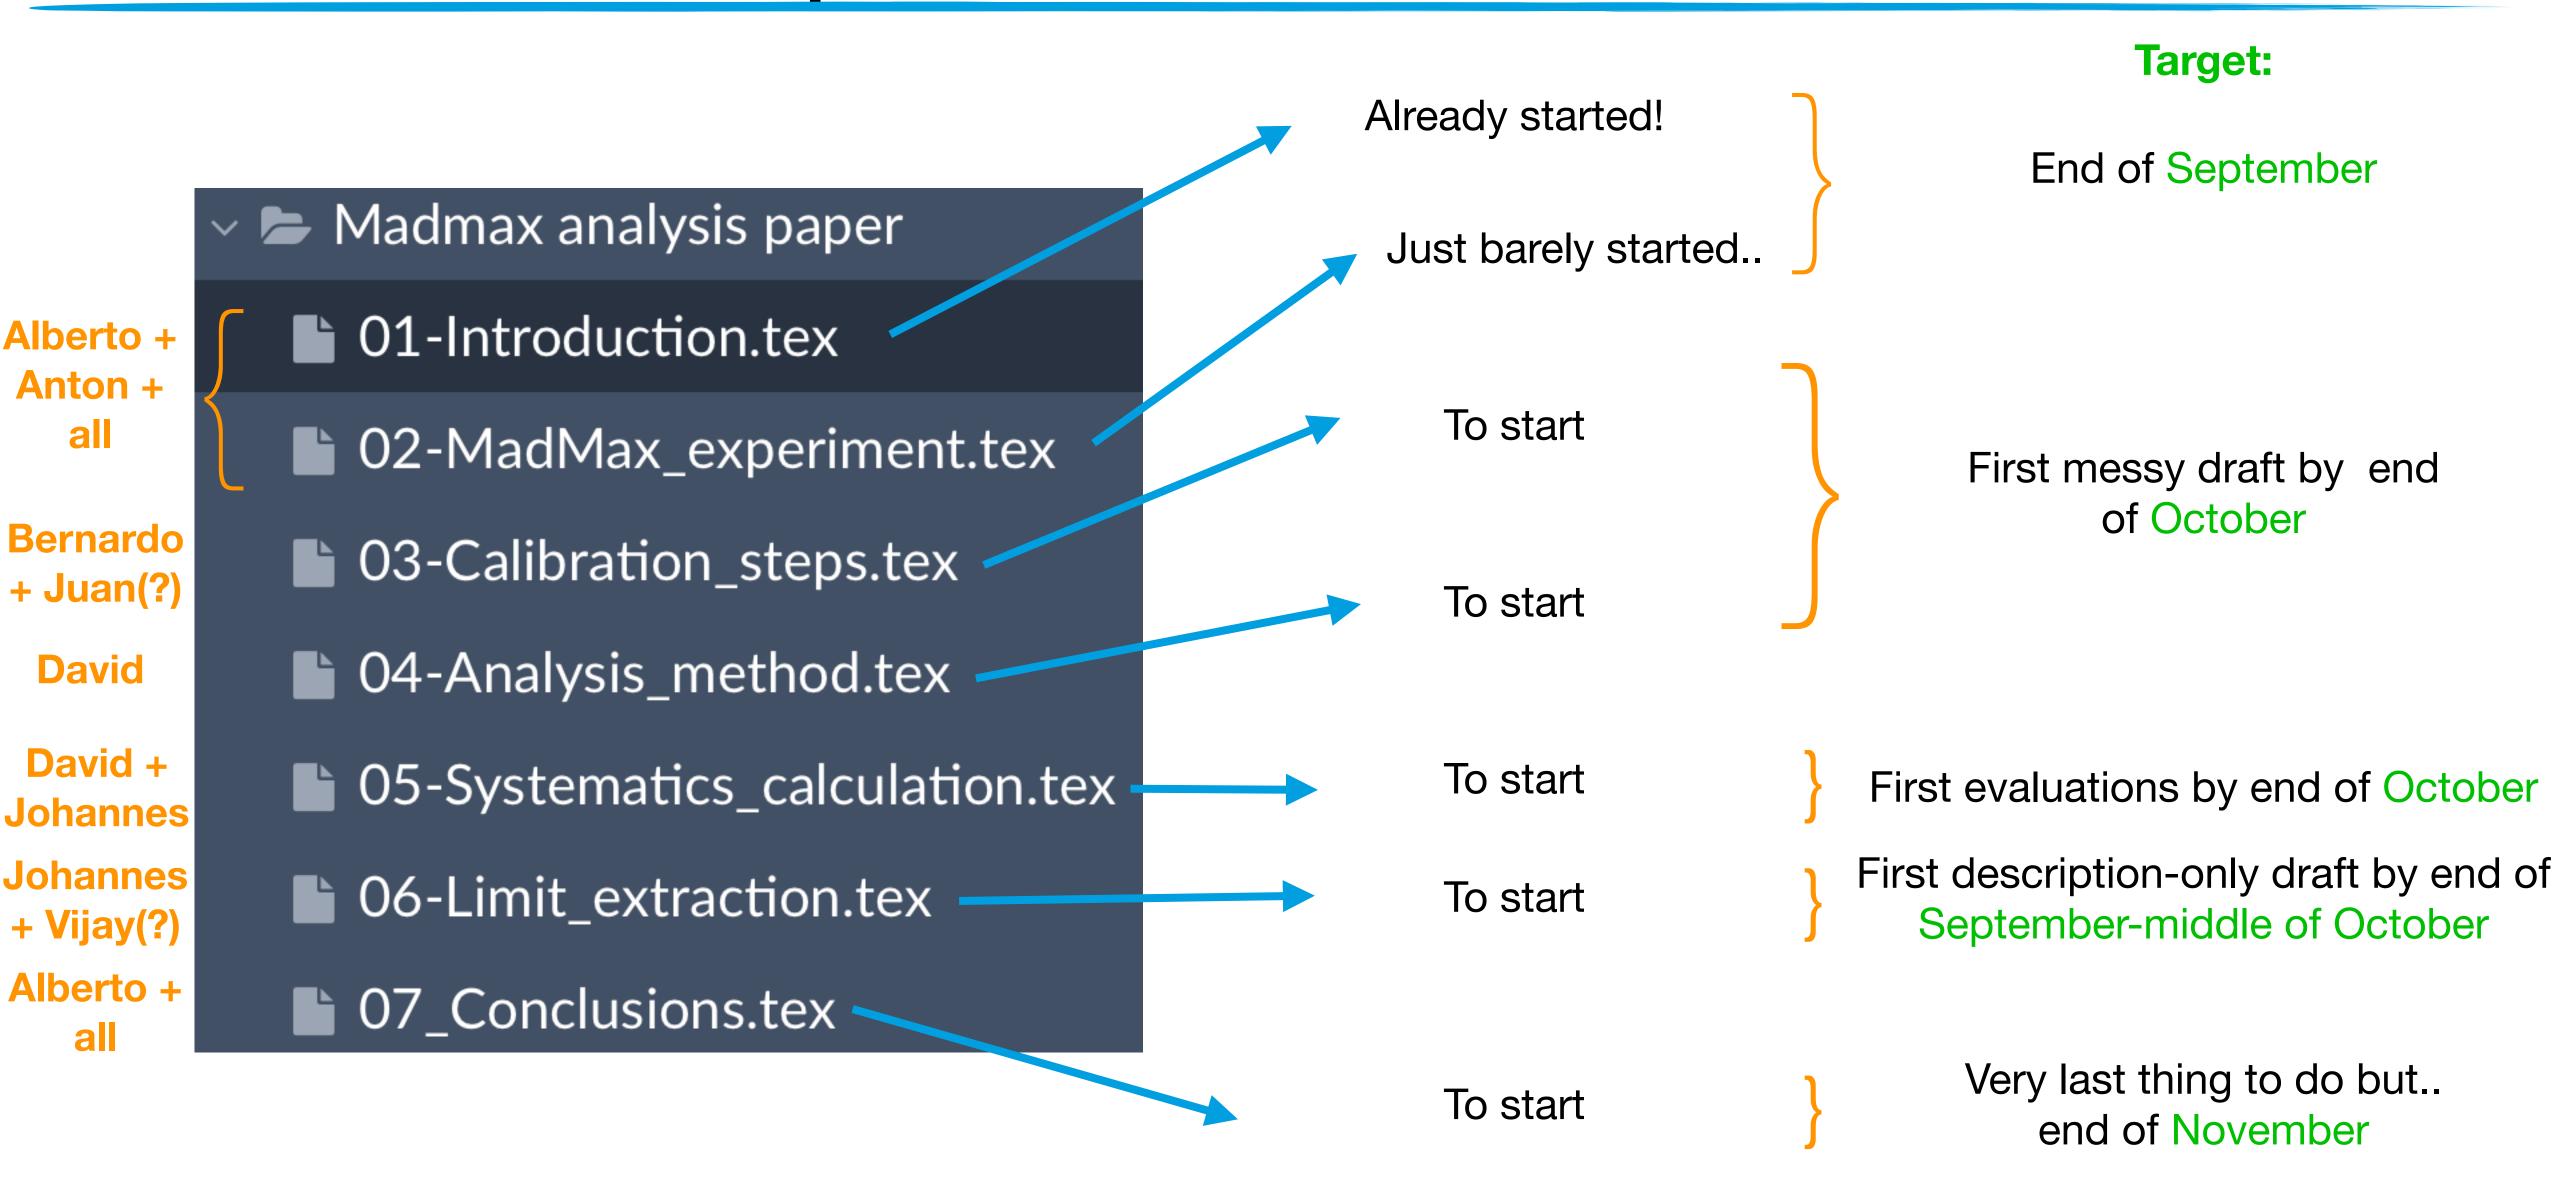

Just a recap and place for a statement about how good we did 😁

Paper structure with responsibilities: proposal

Describe the physics concepts and motivation for Madmax Describe the experiment as it was in 2022-2023 data-taking Madmax analysis paper Here, details on the geometry should be added 01-Introduction.tex Alberto + Anton + Describe the various measurements that have been done to all 02-MadMax_experiment.tex extract the boost factor Bernardo ■ 03-Calibration_steps.tex Describe the ADS (+ COMSOL) simulation(s), + **Juan(?)** including the 04-Analysis_method.tex **David** David + Describe how we estimated systematic uncertainties, using 05-Systematics_calculation.tex a combination of measurements and simulations Johannes **Johannes** Describe the statistical framework used to extract the final 06-Limit_extraction.tex + **V**ijay(?) limit on g_{ay} and how we extract the final result Alberto + 07_Conclusions.tex all Just a recap and place for a statement about how good we did 😁

Paper status and future

Work to do today - now

The goal is to **publish by December!**

Target journal: **EPJC**

Alberto +

Anton +

all

Bernardo

+ **Juan(?)**

David

David +

Johannes

Johannes

+ **Vijay(?)**

Alberto +

all

- 01-Introduction.tex
- 02-MadMax_experiment.tex
- 03-Calibration_steps.tex
- 04-Analysis_method.tex
- 05-Systematics_calculation.tex
- 06-Limit_extraction.tex
- 07_Conclusions.tex

Let's try to define here and now a detailed structure of the sections

Structure example:

- SA measurements
 - Y-factor
- VNA measurements
 - Transmission line

Shared overleaf link to work together on this:
