Introduction to Accelerator Physics

Part 3

Pedro Castro / Accelerator Physics Group (MPY) Zeuthen, 9th August 2023

Accelerator lectures framework in Summer Student Prog.

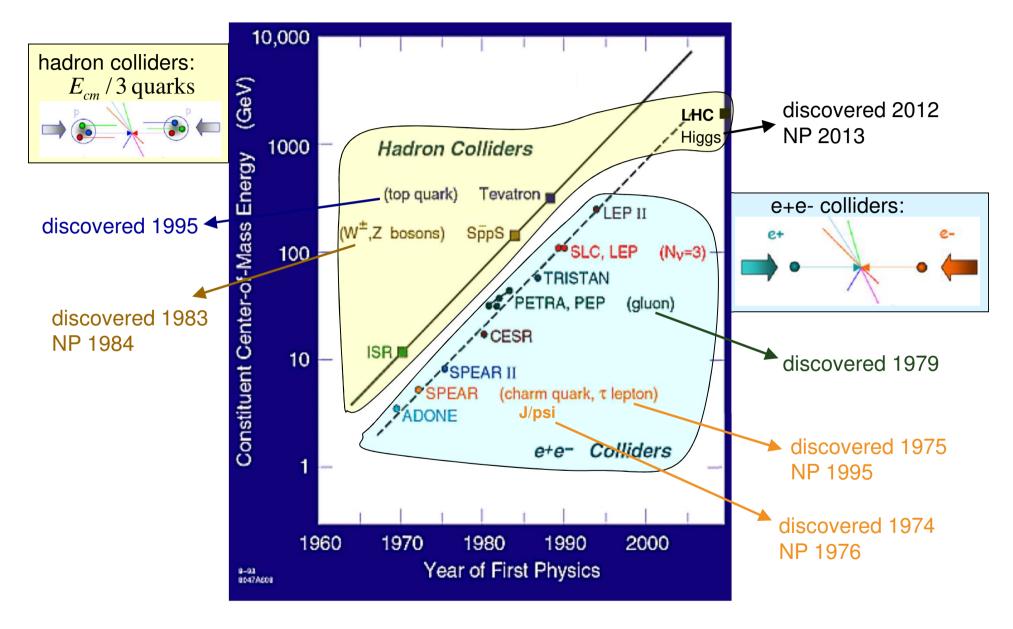

10th, 11th Aug.: Photoinjector PITZ, Namra Aftab

<u>Today:</u> focus on synchrotrons and synchrotron technology

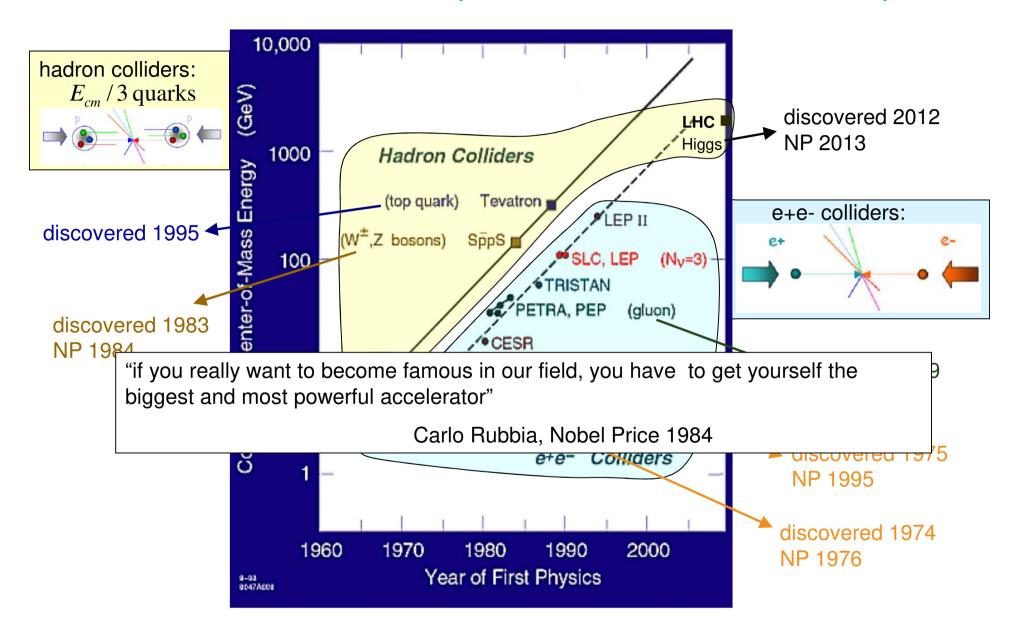

synchrotrons: machines for discoveries

Facility	Particle(s) discovered	Year of discovery	Nobel Price
SPEAR	charm quark	1974	1976
SPEAR	tau lepton	1975	1995
PETRA	gluon	1979	
S $ar{p}$ pS	W^\pm , Z bosons	1983	1984
SLC, LEP	$N_{\rm v} = 3$		
Tevatron	top quark	1995	
LHC	Higgs	2012	2013

Main HEP discoveries at synchrotrons in the last 50 years

Main HEP discoveries at synchrotrons in the last 50 years

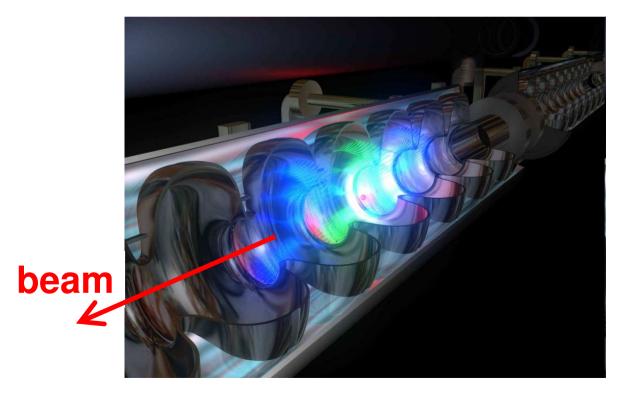

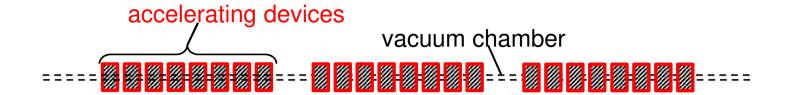

Scope of this lecture:

- 1. Synchrotrons: key components and their challenges to reach high energies:
 - Dipole magnetic fields
 - Superconducting dipoles
 - Quadrupole magnets to focus beams

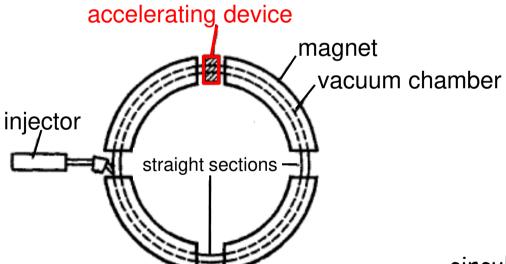

2. Synchrotrons and Linear Accelerators:

Acceleration using radio-frequency electomagnetic fields

<u>lin</u>ear <u>ac</u>celerator (linac)

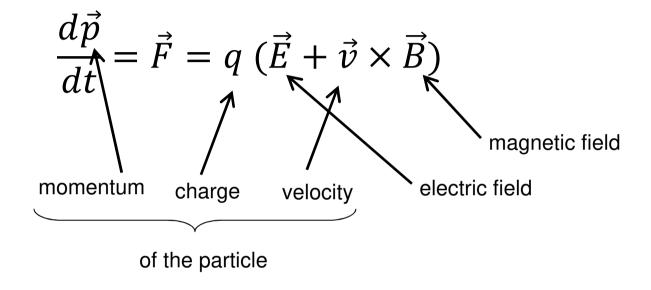

circular accelerator: synchrotron

DESY.

Motion in electric and magnetic fields

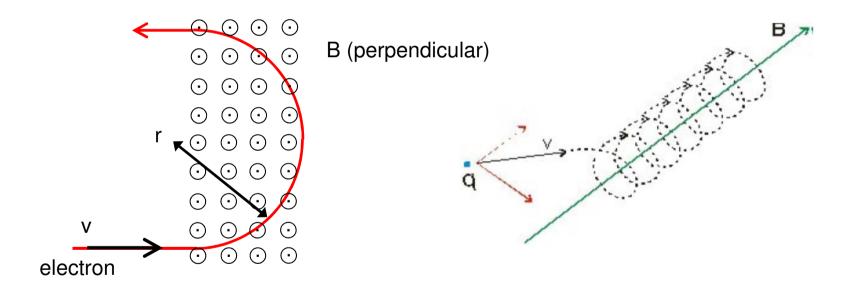

Equation of motion under Lorentz Force

Motion in magnetic fields

if the electric field is zero ($\vec{E} = 0$), then

$$\vec{F} = \frac{d\vec{p}}{dt} = q \cdot \vec{v} \times \vec{B} \quad \rightarrow \quad \vec{F} \perp \vec{v}$$

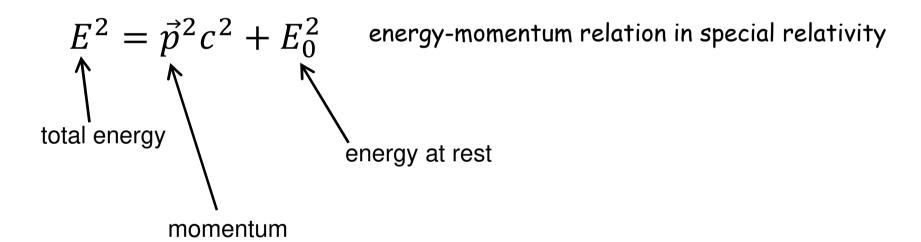

Magnetic fields do not change the particles energy

Motion in magnetic fields

if the electric field is zero (E=0), then

$$\vec{F} = \frac{d\vec{p}}{dt} = q \cdot \vec{v} \times \vec{B}$$

DESY.

Motion in magnetic fields

if the electric field is zero (E=0), then

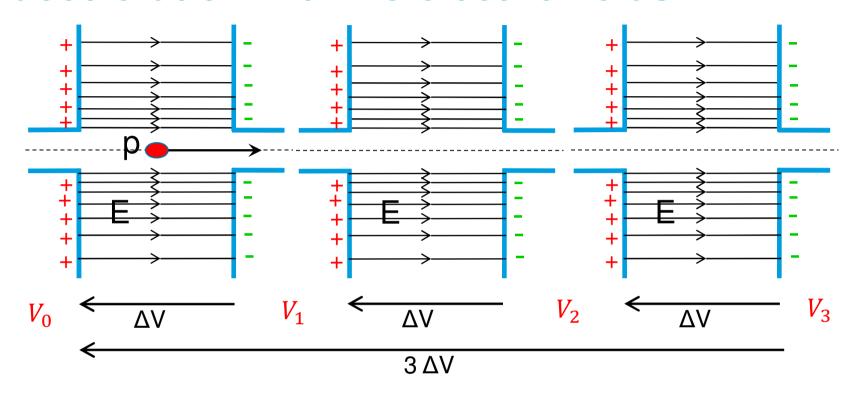

$$\vec{F} = \frac{d\vec{p}}{dt} = q \cdot \vec{v} \times \vec{B}$$

$$E^2 = \vec{p}^2 c^2 + E_0^2$$

$$E \frac{dE}{dt} = c^2 \vec{p} \frac{d\vec{p}}{dt} = c^2 q \vec{p} (\vec{v} \times \vec{B}) = c^2 q |\vec{p}| |\vec{v} \times \vec{B}| \cos \emptyset = 0$$
since $\vec{v} \times \vec{B} \perp \vec{v} \Rightarrow \emptyset = 90^\circ$

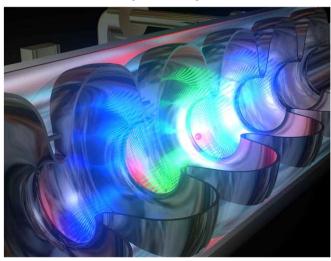

Magnetic fields do not change the particles energy, only electric fields do !

acceleration with DC electric fields

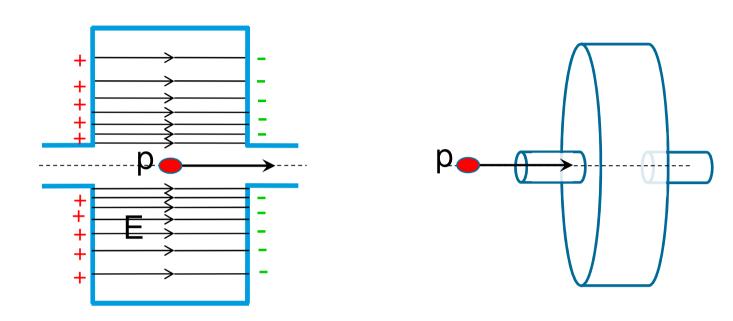

In general:

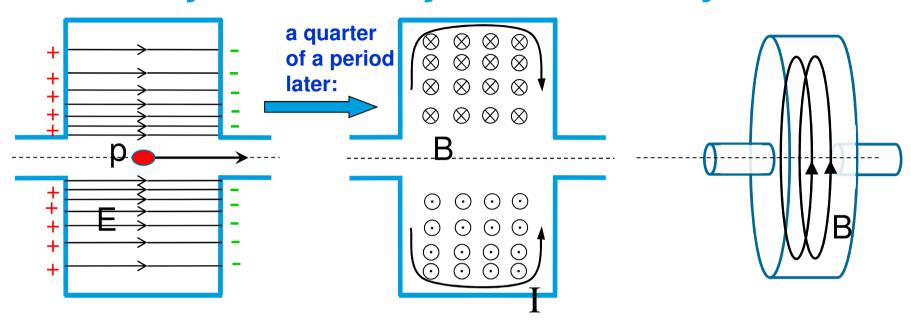

- Static magnetic fields → to guide (bend + focus) particle beams
- Static electric fields → accelerate particle beams (low energy)
- Radio-frequency EM fields → accelerate particle beams (high E)

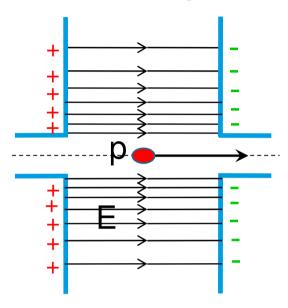

acceleration with RF (radio-frequency) electric fields

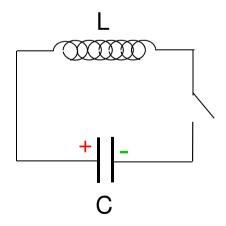

RF cavity basics: a cylindrical cavity

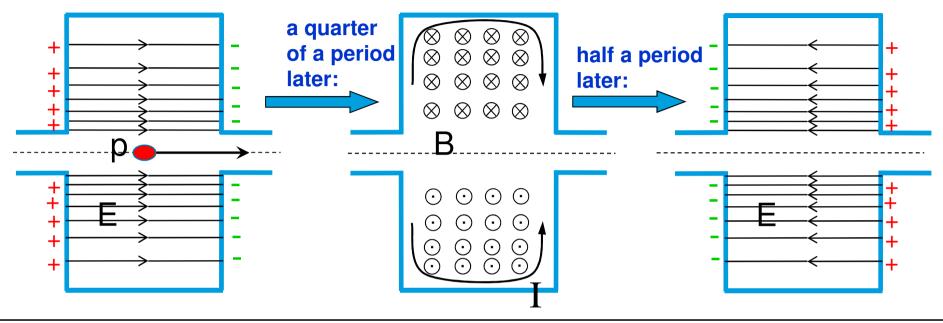

RF cavity basics: a cylindrical cavity

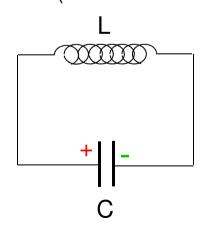

LC circuit (or resonant circuit) analogy:

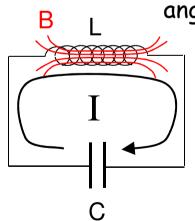

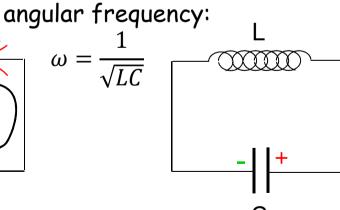

RF cavity basics: a cylindrical cavity

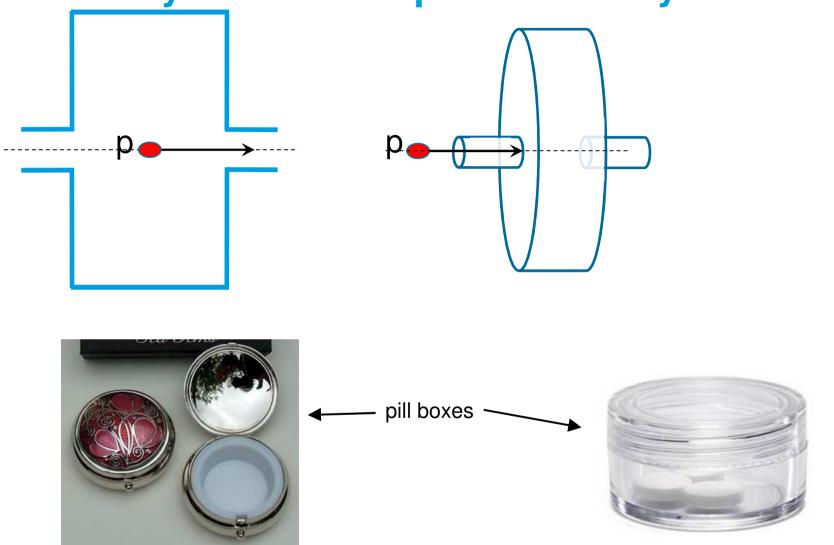

LC circuit (or resonant circuit) analogy:

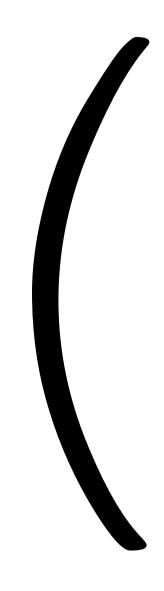

RF cavity basics: the pill box cavity

Equations for the electric and magnetic fields in a pill box cavity

(differential formulation in SI units)

$$\vec{\nabla} \cdot \vec{E} = \frac{\rho}{\varepsilon_0}$$

$$\vec{\nabla} \cdot \vec{B} = 0$$

$$\vec{\nabla} \times \vec{E} = -\frac{\partial \vec{B}}{\partial t}$$

$$\vec{\nabla} \times \vec{B} = \mu_0 \vec{J} + \mu_0 \varepsilon_0 \frac{\partial \vec{E}}{\partial t}$$

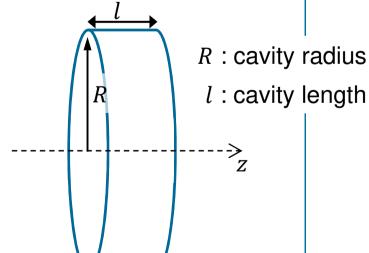

+ boundary conditions

TM modes (transverse magnetic modes)

set of solutions with $\overline{B_z} = 0$ (that is, \overline{B} is transverse)

set of solutions with $E_z = 0$ (that is, \vec{E} is transverse)

TE modes (transverse electric modes)

(differential formulation in SI units)

$$\vec{\nabla} \cdot \vec{E} = \frac{\rho}{\varepsilon_0}$$

$$\vec{\nabla} \cdot \vec{B} = 0$$

$$\vec{\nabla} \times \vec{E} = -\frac{\partial \vec{B}}{\partial t}$$

$$\vec{\nabla} \times \vec{B} = \mu_0 \vec{J} + \mu_0 \varepsilon_0 \frac{\partial E}{\partial t}$$

+ boundary conditions

R: cavity radius

l: cavity length

set of solutions with $B_z = 0$ (that is, \vec{B} is transverse)

$$E_{z} = E_{0}J_{m}\left(x_{mn}\frac{r}{R}\right)\cos m\theta \cos\left(\frac{p\pi}{l}z\right)e^{j\omega t}$$

$$E_{r} = -\frac{p\pi}{l}\frac{R}{x_{mn}}E_{0}J'_{m}\left(x_{mn}\frac{r}{R}\right)\cos m\theta \sin\left(\frac{p\pi}{l}z\right)e^{j\omega t}$$

$$E_{\theta} \neq -\frac{p\pi}{l}\frac{mR^{2}}{x_{mn}^{2}r}E_{0}J_{m}\left(x_{mn}\frac{r}{R}\right)\sin m\theta \sin\left(\frac{p\pi}{l}z\right)e^{j\omega t}$$

$$B_{z} = 0$$

$$B_{r} = -j\omega\frac{mR^{2}}{x_{mn}^{2}rc^{2}}E_{0}J_{m}\left(x_{mn}\frac{r}{R}\right)\sin m\theta \cos\left(\frac{p\pi}{l}z\right)e^{j\omega t}$$

$$B_{\theta} = -j\omega\frac{R}{x_{mn}c^{2}}E_{0}J'_{m}\left(x_{mn}\frac{r}{R}\right)\cos m\theta \cos\left(\frac{p\pi}{l}z\right)e^{j\omega t}$$

indices:

m=0,1,2,...: number of full period variations in θ of the fields n=1,2,...: number of zeros of the axial field component in \vec{r} p=0,1,2,...: number of half period variations in z of the fields

 I_m : Bessel's functions

 x_{mn} : n-th root of J_m (that is, $J_m(x_{mn}) = 0$)

angular frequency :
$$\omega = c \sqrt{\left(\frac{x_{mn}}{R}\right)^2 + \left(\frac{p\pi}{l}\right)^2}$$

(differential formulation in SI units)

$$\vec{\nabla} \cdot \vec{E} = \frac{\rho}{\varepsilon_0}$$

$$\vec{\nabla} \cdot \vec{B} = 0$$

$$\vec{\nabla} \times \vec{E} = -\frac{\partial \vec{B}}{\partial t}$$

$$\vec{\nabla} \times \vec{B} = \mu_0 \vec{J} + \mu_0 \varepsilon_0 \frac{\partial \vec{E}}{\partial t}$$

+ boundary conditions

R: cavity radius

l: cavity length

set of solutions with $B_z = 0$ (that is, \vec{B} is transverse)

$$E_{z} = E_{0}J_{m}\left(x_{mn}\frac{r}{R}\right)\cos m\theta \cos\left(\frac{p\pi}{l}z\right)e^{j\omega t}$$

Accelerating field map

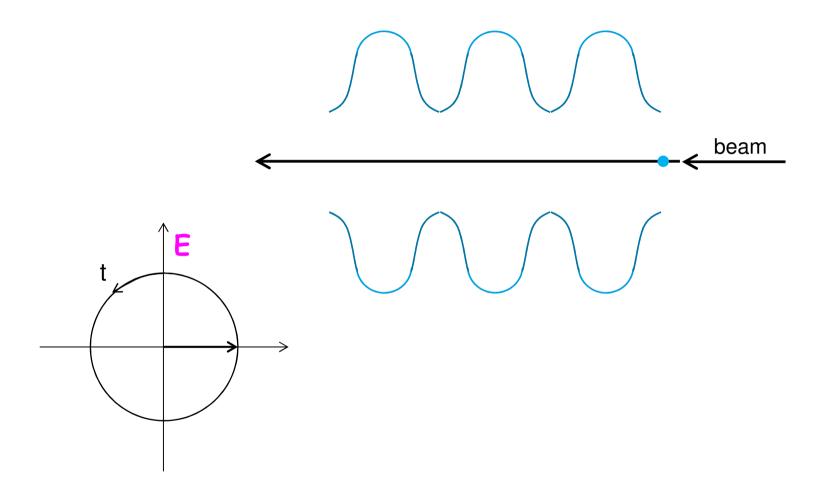

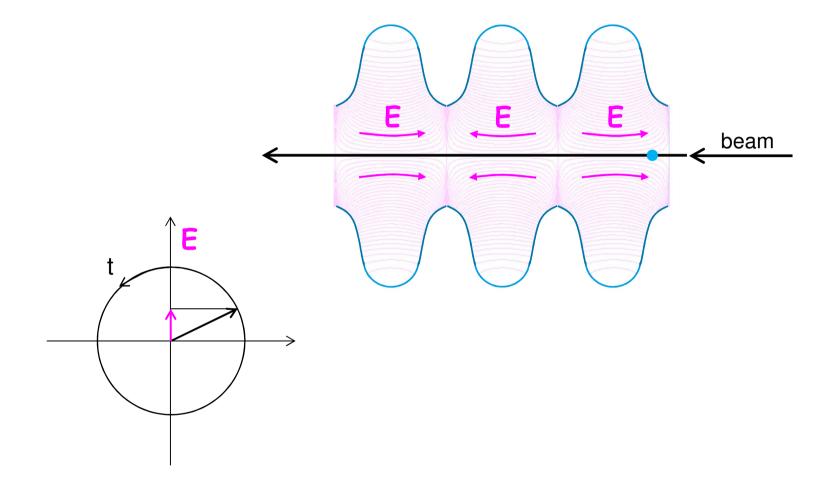

Is there a net acceleration?

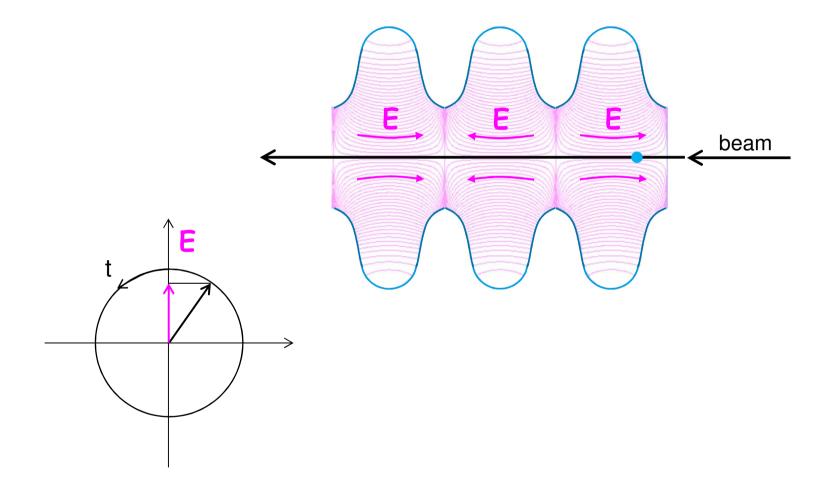

Simulation of the fundamental mode: electric field lines

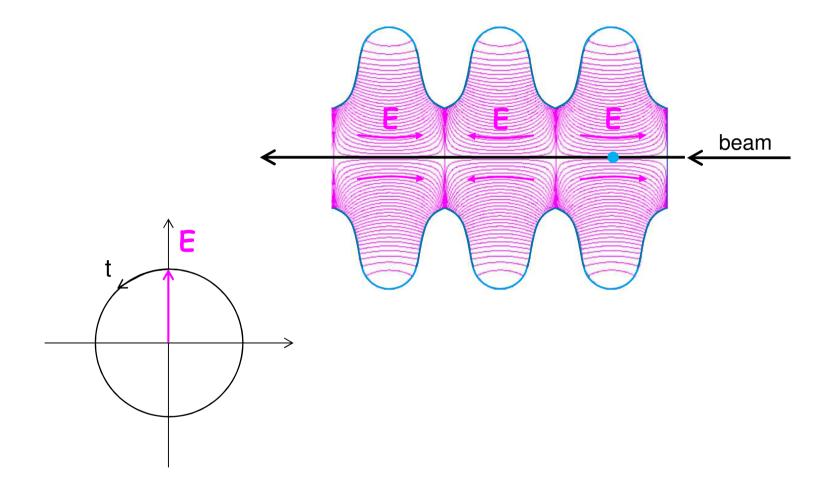

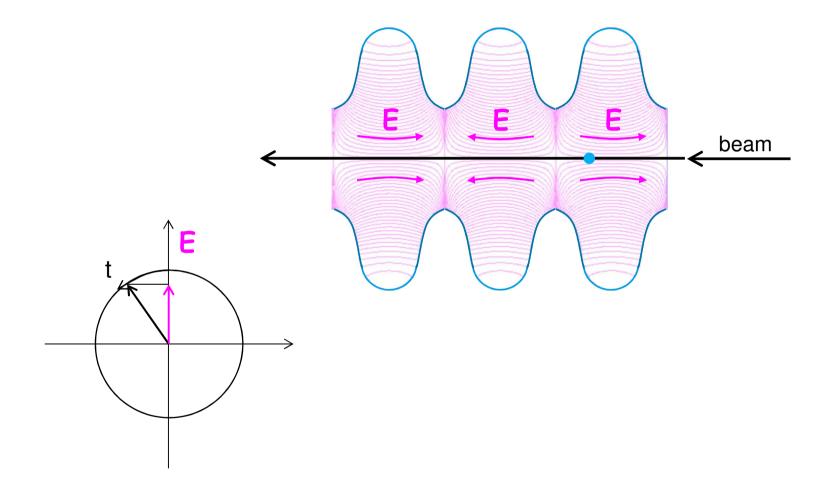

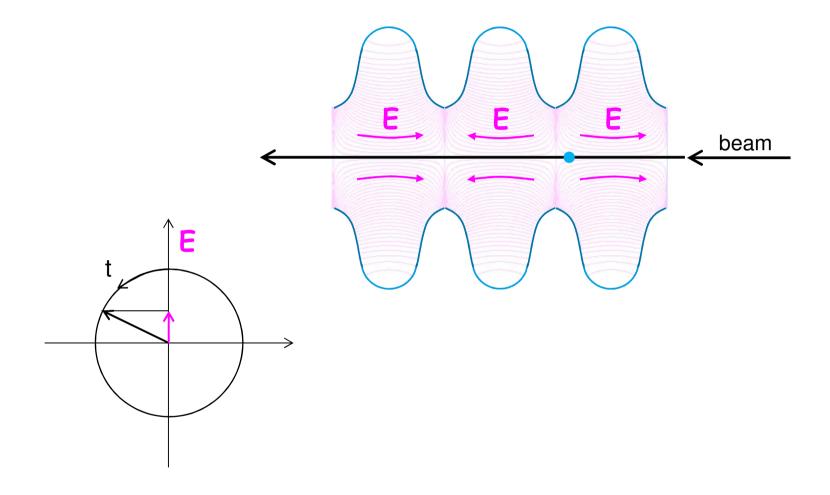

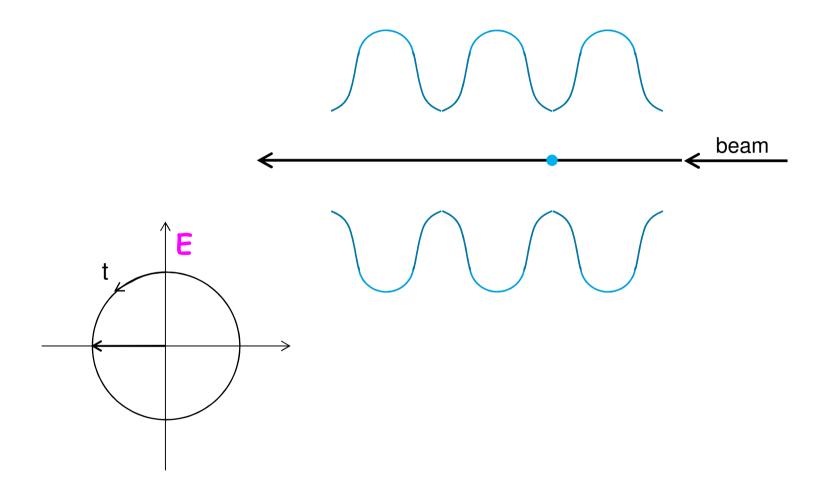

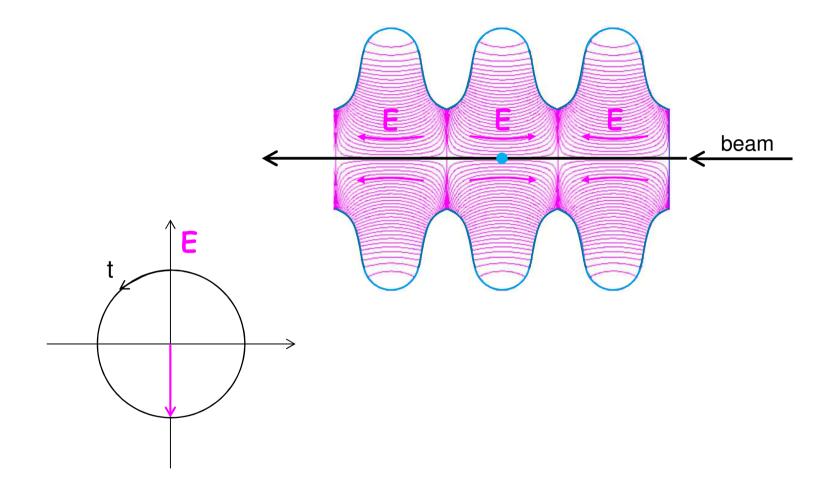

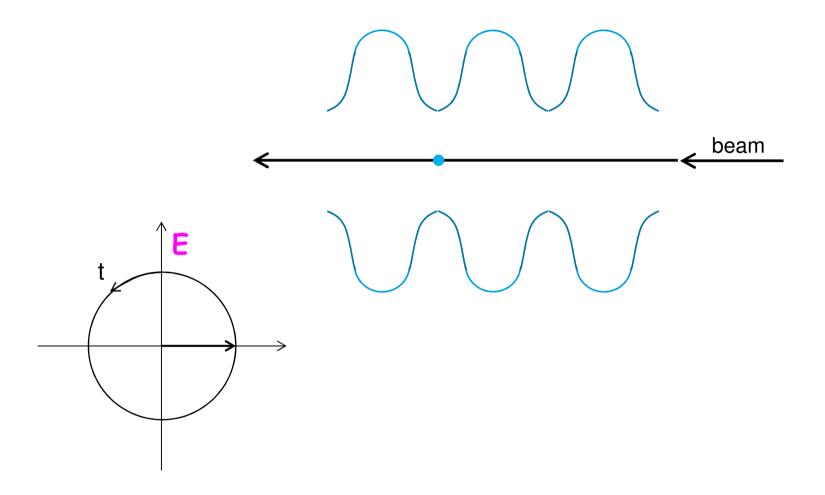

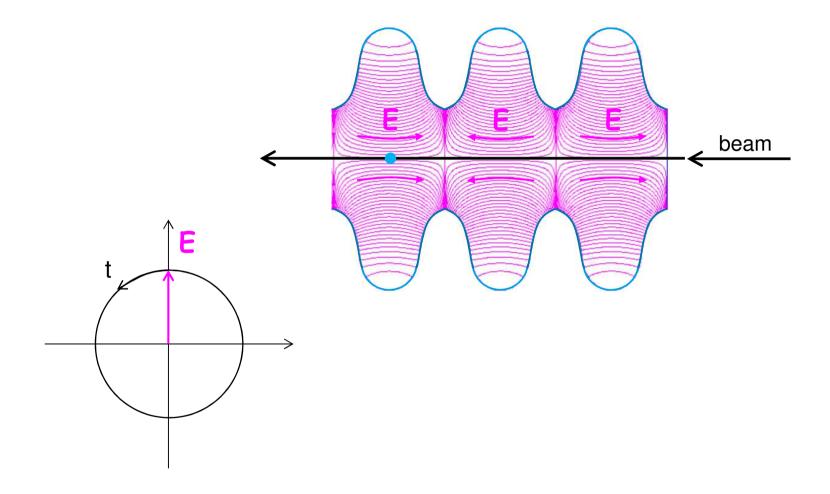

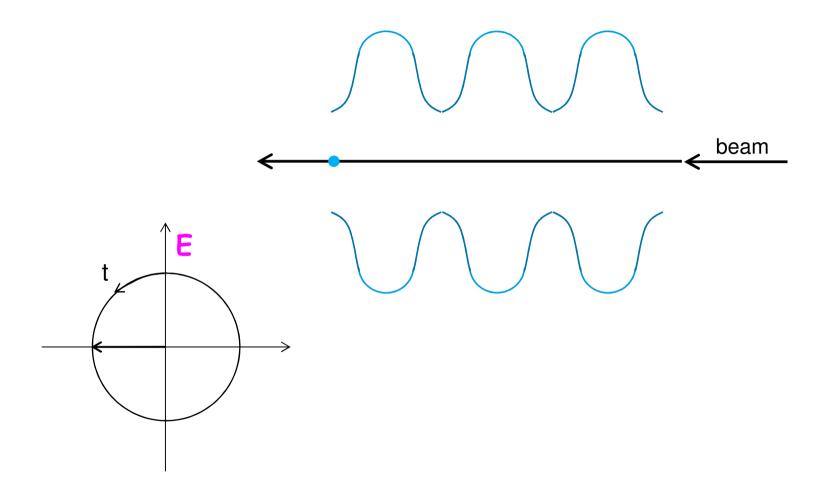

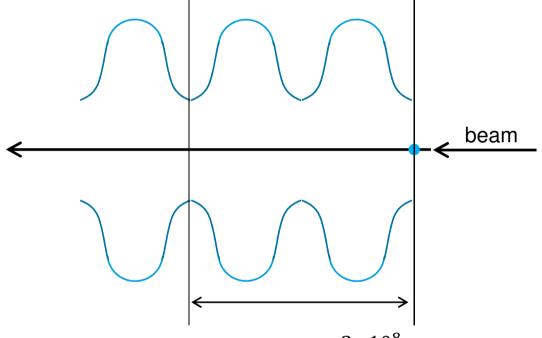

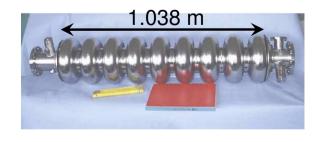

Is there a net acceleration? timing is the key

Is there a net acceleration? timing is the key

for electrons, $\beta \cong 1$

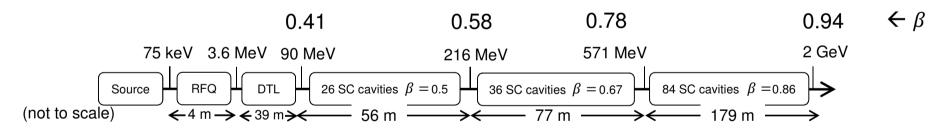

$$l = cT = \frac{c}{f} = \frac{3 \cdot 10^8}{1.3 \cdot 10^9} = 0.23 \, m$$
 (2 cells)

1 cavity (1.038 m) / 9 cells = 0.115 m

Is there a net acceleration? timing is the key

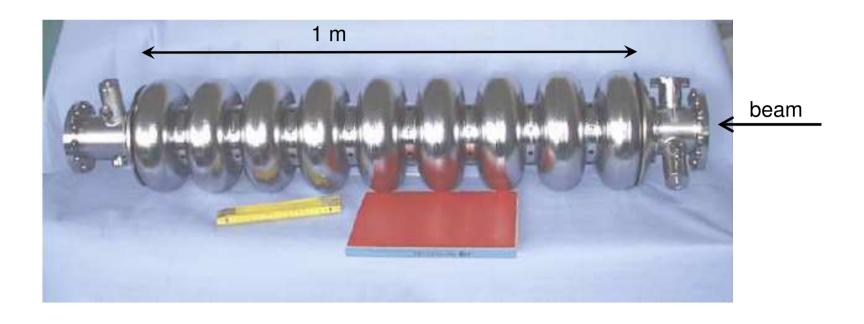

for protrons, $\beta < 1$

example: ESS (European Spallation Source), Lund, Sweden

Frequently Asked Questions

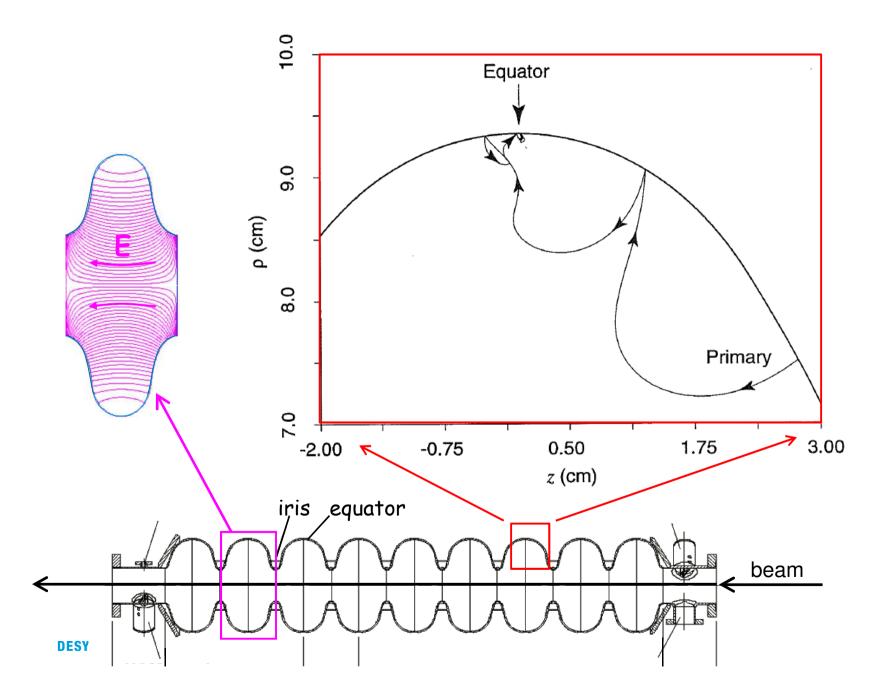

1) Why this shape?

2)

3)

4)

Multipacting mitigation in superconducting cavities

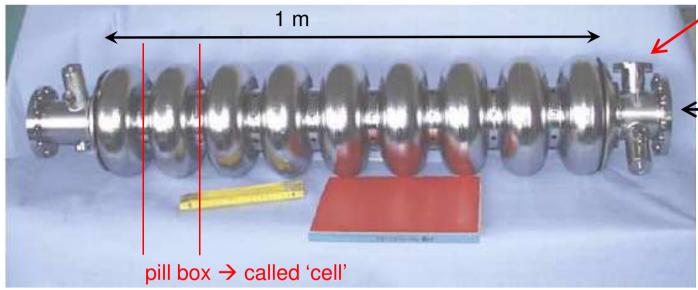

- 1) Why this shape? to reduce/avoid multipacting
- 2) How to feed \vec{E} in?
- 3)
- 4)

DESY.

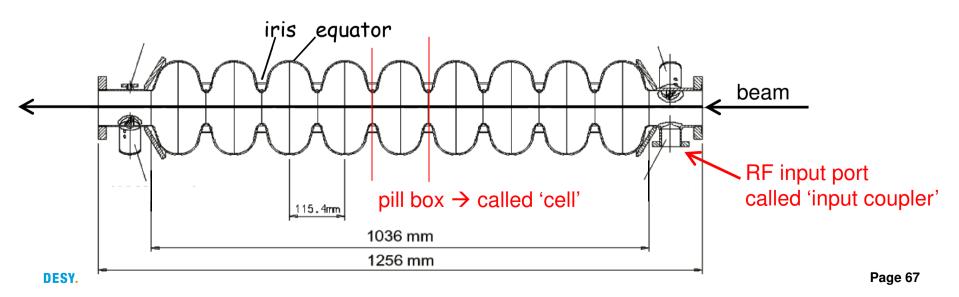

Superconducting cavity used in FLASH and in XFEL

Superconducting cavity used in FLASH (0.3 km) and in XFEL (3 km)

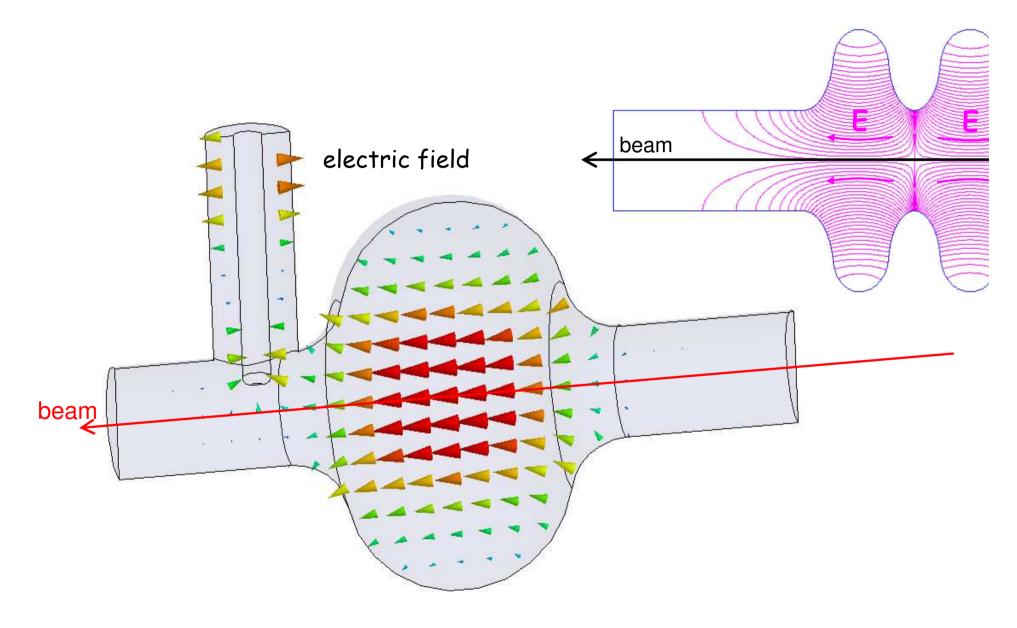

RF input port called 'input coupler' or 'power coupler'

beam

Fundamental mode coupler (input coupler)

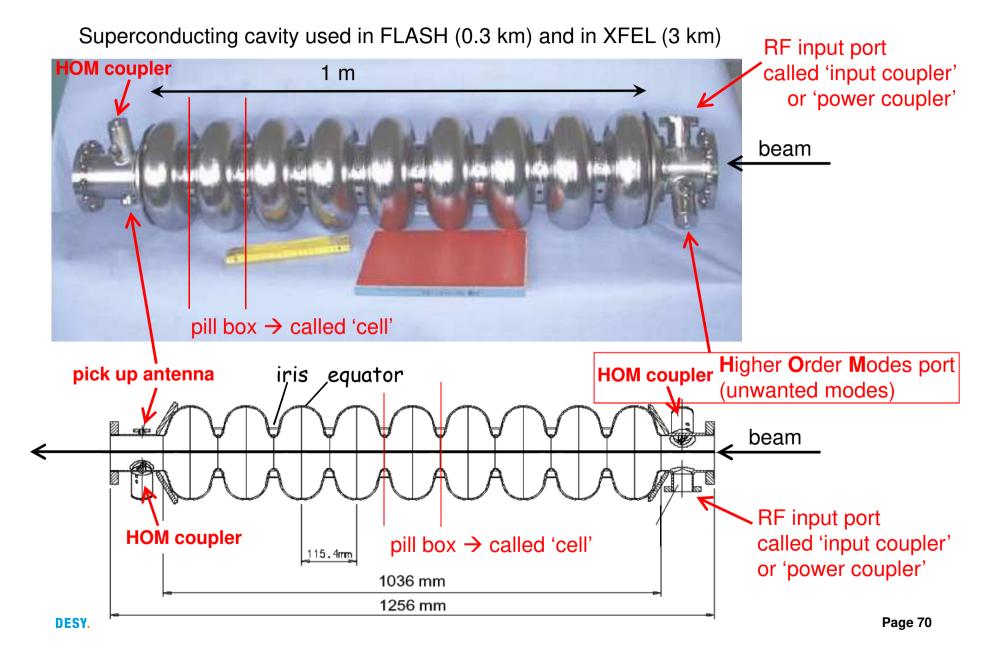

- 1) Why this shape? to reduce/avoid multipacting
- 2) How to feed \vec{E} in? with input couplers
- 3) How to measure \vec{E} ?

4)

DESY.

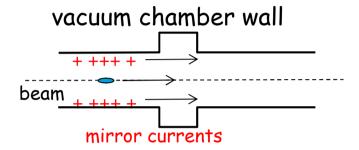

Superconducting cavity used in FLASH and in XFEL

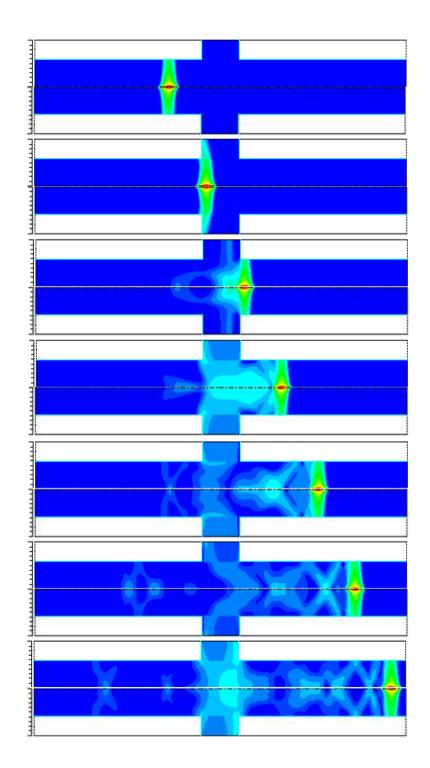

- 1) Why this shape? to reduce/avoid multipacting
- 2) How to feed \vec{E} in? with input couplers
- 3) How to measure \vec{E} ? with pick up antennas
- 4) What are HOM couplers for?

DESY.

Wakefields

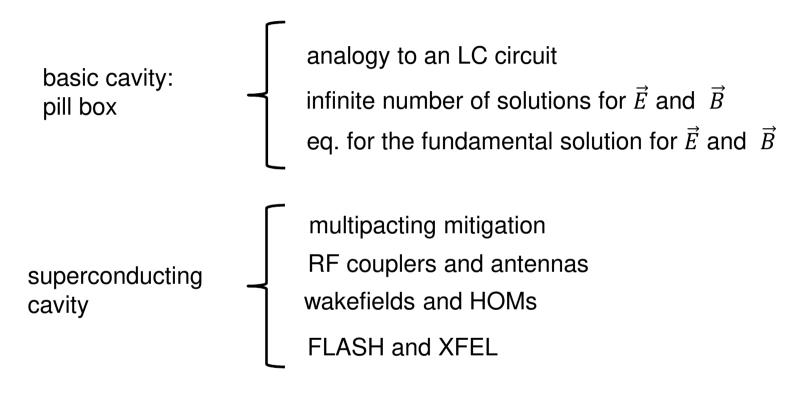

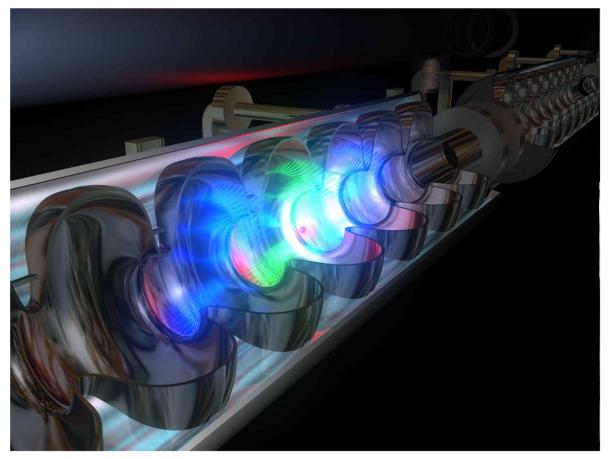

1)	Why this shape?	to reduce/avoid multipacting
2)	How to feed \vec{E} in?	with input couplers
3)	How to measure \vec{E} ?	with pick up antennas
4)	What are HOM couplers for?	. to reduce HOM (wakefields)
