

LEAPS

League of European
Accelerator-based
Photon Sources

Possible SIG topic.

Paul Millar

WG3 lead

Interest in Atlassian software

- Triggered by a question from Alun Ashton:

Were looking into confluence here so I reached out to e.g. DESY confluence people for advice[...]. But overall the software tools we use, incl git etc, and their costs and implementations are of interest.
- More broadly, different LEAPS facilities (very likely) have broadly similar requirements:

Some kind of documentation/wiki service, some kind of ticketing system, etc.
- Is there an opportunity here to work together?
 - Investigate and catalogue available options.
 - Learn from other facility's experience.
 - Possibly pursue collective purchasing options?

A possible SIG topic?

- The available options and their relative merits will likely change over time
 - Not just a one-off evaluation, more a continuous evaluation.
- Free to choose the most appropriate scope:
 - Focus on commercial software (ignoring open-source),
 - Focus on facility-user facing software (ignoring software only used to support internal activity),
 - Some other focus?
- This is a short “testing the waters”, to see if people are interested.
- One way forward would be to schedule a meeting dedicated to this topic.
