

Implications of CoGeNT's New Results For Dark Matter

This talk will present on an independent analysis of the recent release of the first 15 months of CoGeNT's data. The analysis will focus on the properties of a dark matter particle that are consistent with the spectrum and modulation of the low energy excess of events in the detector. I will also examine the data in light of the new CRESST results and present prospects of detecting such a dark matter particle at other experiments.
