OpenMMC Project Status

Wednesday 6 December 2023 16:30 (15 minutes)

OpenMMC is an Open Source MMC firmware for MicroTCA AMCs. It currently
powers the AMC FMC Carrier (AFC) versions 3.1 and 4.0. Several
improvements have been made to the code over the last year to address
some shortcomings of previous releases, like removing redundant code,
add HPM compatiblity with ipmitool, replace hard-coded clock mux
setting with configuration over IPMI.
An extensive road-map for version 2.0 has been put in place to guide
future development envisioning better modularity, ease porting to
other boards / microcontrollers and better error handling.
