SEMINAR
Feldtheorie auf dem Gitter und
Phänomenologie der Elementarteilchen

Am Montag, dem **9. Juni**, um **15:30 Uhr s.t.** spricht

Prof. Francesco Sannino

University of Southern Denmark

zum Thema

**The Phase Diagram of SU(N) Gauge
Theories: From LHC to Cosmology**

Abstract

I will introduce the Phase Diagram as function of number of flavors, colors and matter representation for any gauge theory of fundamental interactions. I will briefly review the various non-perturbative methods available, both for supersymmetric and non supersymmetric gauge theories, to plot the diagram. I will also present a novel method which makes use of the newly conjectured all-order beta function for nonsupersymmetric gauge theories.

The knowledge of the phase diagram has an immediate impact on the construction of viable models of dynamical breaking of the electroweak symmetry, dark matter as well as unparticle physics.
