AUTOMATION
NEXT-TO-LEADING ORDER
NEW PHYSICS

Tools for New Physics Searches at Hadron Colliders

MadGolem: *raison-d'etre*

Why NLO ?

- QCD corrections quantitatively relevant : $K \sim 1.5$
- QCD corrections qualitatively relevant: scale dependence, normalization & shape of distributions, gluon radiation, new partonic subprocesses . . .

MadGolem: *raison-d'etre*

Why NLO ?

- QCD corrections quantitatively relevant : $K \sim 1.5$
- QCD corrections qualitatively relevant: scale dependence, normalization & shape of distributions, gluon radiation, new partonic subprocesses . . .

Why Automation ?

- Many models & processes $\leftrightarrow$ analogue technical challenges
- Cost & time saving, robustness, accessibility
- Eases validation, engages Theory/Experiment interchange

MadGolem: *raison-d'etre*

MadGolem

[Binoth, Gonçalves-Netto, DLV, Mawatari, Plehn, Wigmore, arXiv:1108.1250 [hep-ph]]

- Fully automated calculation of NLO QCD corrections for arbitrary $2 \to 2$ processes in a generic BSM framework soon to be public !

MadGolem: *raison-d'etre*

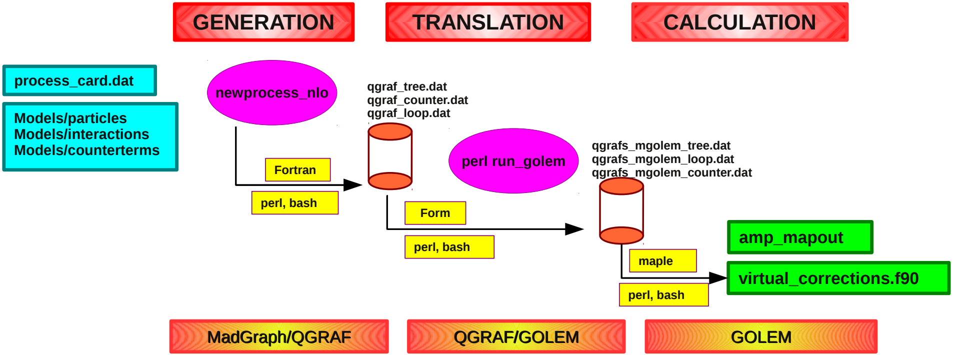
Handling the loops - summary



Handling the loops: in best shape for BSM

♠ ***Analytical results accessible at any time***

Handling the loops: in best shape for BSM

♠ ***Analytical results accessible at any time***

♠ ***Dedicated coding***: *efficient generation & numerical evaluation*

- Loop filtering – Automatic removal of vanishing partial amplitudes from further analytical processing
- Grouping of topologically equivalent one-loop diagrams
- Handling of iterative structures
- Amplitude coefficients as split shared libraries

Handling the loops: in best shape for BSM

♠ ***Analytical results accessible at any time***

♠ ***Dedicated coding**: efficient generation & numerical evaluation*

- Loop filtering – Automatic removal of vanishing partial amplitudes from further analytical processing
- Grouping of topologically equivalent one-loop diagrams
- Handling of iterative structures
- Amplitude coefficients as split shared libraries

Handling the loops: in best shape for BSM

Handling the UV divergences

Including the Counterterms

$$\mathcal{L}_0 \to \mathcal{L}(Z_\phi^{1/2}\,\phi, Z_g\,g) \quad = \quad \mathcal{L}(\phi, g) + \delta\,\mathcal{L}\,(\phi, g, \delta\,Z_\phi, \delta\,g)$$

Handling the UV divergences

Including the Counterterms

$$\mathcal{L}_0 \to \mathcal{L}(Z_\phi^{1/2}\,\phi, Z_g\,g) \quad = \quad \mathcal{L}(\phi, g) + \delta\,\mathcal{L}\,(\phi, g, \delta\,Z_\phi, \delta\,g)$$

$$\underbrace{\delta\mathcal{L}(\delta\,Z_\phi, \delta\,g)}_{\text{Models/vertex\_ct.dat}} \qquad \Leftrightarrow \qquad \underbrace{\Sigma_q, \quad \Sigma_{\tilde{q}}, \quad \Sigma_g, \quad \Sigma_{\tilde{g}} \qquad @\mathcal{O}(\alpha_s)}_{\text{GOLEMproc/CT\_list.map}}$$

Handling the UV divergences

Including the Counterterms

$$\mathcal{L}_0 \to \mathcal{L}(Z_\phi^{1/2}\,\phi, Z_g\,g) \quad = \quad \mathcal{L}(\phi, g) + \delta\,\mathcal{L}\,(\phi, g, \delta\,Z_\phi, \delta\,g)$$

$$\underbrace{\delta\mathcal{L}(\delta\,Z_\phi, \delta\,g)}_{\text{Models/vertex\_ct.dat}} \qquad \Leftrightarrow \qquad \underbrace{\Sigma_q, \quad \Sigma_{\tilde{q}}, \quad \Sigma_g, \quad \Sigma_{\tilde{g}} \qquad @\mathcal{O}(\alpha_s)}_{\text{GOLEMproc/CT\_list.map}}$$

Renormalization scheme

- $\overline{\mathrm{MS}}$, for the field-strength RCs of the massless particles
- OS, for the field-strength RCs of the massive particles
- $\overline{\mathrm{MS}}$/zero-momentum, for g_s [Beenakker et al, Berge et al]
- SUSY breaking from Dimensional Regularization restored through additional finite CTs [Martin, Vaughn; Beenakker et al].

Handling the IR divergences

♠ **Dipole Subtraction:** [Catani, Seymour; Catani, Dittmaier, Seymour, Trócsányi]

$$\sigma = \int_m d\,\sigma^B + \int_{m+1} d\,\sigma^R + \int_m \left[\int_1 d\,\sigma^V \right]$$

Handling the IR divergences

♠ Dipole Subtraction: [Catani, Seymour; Catani, Dittmaier, Seymour, Trócsányi]

$$\sigma = \int_m d\sigma^B + \underbrace{\int_{m+1} d\sigma^R}_{\int \frac{dk}{k^{1+\epsilon}} \sim \frac{1}{\epsilon_{IR}}, \int \frac{d\theta}{\theta^{1+\epsilon}} \sim \frac{1}{\epsilon_{IR}}} + \int_m \left[\int_1 \underbrace{d\sigma^V}_{\int \frac{dk}{k^{1+\epsilon}} \sim \frac{1}{\epsilon_{IR}}} \right]$$

Handling the IR divergences

♠ Dipole Subtraction: [Catani, Seymour; Catani, Dittmaier, Seymour, Trócsányi]

$$\sigma = \int_m d\sigma^B + \underbrace{\int_{m+1} d\sigma^R - d\sigma^A}_{\frac{1}{\epsilon_{IR}} - \frac{1}{\epsilon_{IR}}} + \int_m \left[\int_1 \underbrace{d\sigma^V + d\sigma^A}_{\frac{1}{\epsilon_{IR}} - \frac{1}{\epsilon_{IR}}} \right]$$

Handling the IR divergences

♠ Dipole Subtraction: [Catani, Seymour; Catani, Dittmaier, Seymour, Trócsányi]

$$\sigma = \int_m d\sigma^B + \underbrace{\int_{m+1} d\sigma^R - d\sigma^A}_{\frac{1}{\epsilon_{IR}} - \frac{1}{\epsilon_{IR}}} + \int_m \left[\int_1 \underbrace{d\sigma^V + d\sigma^A}_{\frac{1}{\epsilon_{IR}} - \frac{1}{\epsilon_{IR}}} \right]$$

Local (pointwise) subtraction of the IR poles

- Based on factorization of collinear&soft singularities
- Process-independent
- Analytically integrable over the single-parton phase-space containing the divergences

Handling the IR divergences

♠ **Dipole Subtraction:** [Catani, Seymour; Catani, Dittmaier, Seymour, Trócsányi]

$$\sigma = \int_m d\,\sigma^B + \underbrace{\int_{m+1} d\,\sigma^R - d\,\sigma^A}_{\frac{1}{\epsilon_{IR}} - \frac{1}{\epsilon_{IR}}} + \int_m \left[\int_1 \underbrace{d\,\sigma^V + d\,\sigma^A}_{\frac{1}{\epsilon_{IR}} - \frac{1}{\epsilon_{IR}}} \right]$$

Local (pointwise) subtraction of the IR poles

- Based on factorization of collinear&soft singularities
- Process-independent
- Analytically integrable over the single-parton phase-space containing the divergences

$$d\sigma^A = \sum_l f(\epsilon_{IR}) \times d\sigma_l^B \otimes V_l$$

$$\int_{m+1} d\,\sigma^A = \sum_l \int_m f(\epsilon_{IR}) \times d\,\sigma_l^B \otimes \int_1 V_l = f(\epsilon_{IR}) \times \int_m d\sigma_l^B \otimes I$$

I_{SUSY} (including α-dependence [Nagy, Trócsányi]) available @ MadGolem

Handling the OS Divergences

Automatized OS Subtraction available @ MadGolem [Beenakker, Höpker, Spira, Zerwas]

$$d\sigma^R \longrightarrow d\sigma^R\Big]_{\text{regular}} + d\sigma^{R*}\Big]_{\mathcal{O}(1/(p^2-m^2))}$$

$$ug \to \tilde{u}_L \tilde{\chi}_1 j \quad + \quad uu \to \tilde{u}_L \tilde{u}_L^* \to \tilde{u}_L \tilde{\chi}_1 j$$

Handling the OS Divergences

Automatized OS Subtraction available @ MadGolem [Beenakker, Höpker, Spira, Zerwas]

$$d\sigma^R \longrightarrow d\sigma^R\Big]_{\text{regular}} + d\sigma^{R*}\Big]_{\mathcal{O}(1/(p^2-m^2))}$$

$$ug \to \tilde{u}_L \tilde{\chi}_1 j \quad + \quad uu \to \tilde{u}_L \tilde{u}^*_L \to \tilde{u}_L \tilde{\chi}_1 j$$

$$\sigma = \int_{m+1} d\,\sigma^R$$

Handling the OS Divergences

Automatized OS Subtraction available @ MadGolem [Beenakker, Höpker, Spira, Zerwas]

$$d\sigma^{R} \longrightarrow d\sigma^{R}\Big]_{\text{regular}} + d\sigma^{R*}\Big]_{\mathcal{O}(1/(p^2-m^2))}$$

$$ug \to \tilde{u}_L \tilde{\chi}_1 j \quad + \quad uu \to \tilde{u}_L \tilde{u}_L^* \to \tilde{u}_L \tilde{\chi}_1 j$$

$$\sigma = \int_{m+1} d\,\sigma^{R} \longrightarrow \int_{m+1} \Big[d\,\sigma^{R} + d\,\sigma^{R*}(\Gamma_{\tilde{u}_L}) - d\sigma^{OS}(\Gamma_{\tilde{u}_L}) \Big]$$

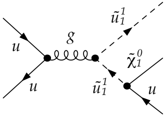
Handling the OS Divergences

Automatized OS Subtraction available @ MadGolem [Beenakker, Höpker, Spira, Zerwas]

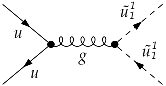
$$d\sigma^R \longrightarrow d\sigma^R\Big]_{\text{regular}} + d\sigma^{R*}\Big]_{\mathcal{O}(1/(p^2-m^2))}$$

$$ug \to \tilde{u}_L\tilde{\chi}_1 j \quad + \quad uu \to \tilde{u}_L\tilde{u}_L^* \to \tilde{u}_L\tilde{\chi}_1 j$$

$$\sigma = \int_{m+1} d\,\sigma^R \longrightarrow \int_{m+1} \left[d\,\sigma^R + d\,\sigma^{R*}(\Gamma_{\tilde{u}_L}) - d\sigma^{OS}(\Gamma_{\tilde{u}_L})\right]$$



\-



$$uu \to \tilde{u}_L\tilde{u}_L^* \to \tilde{u}_L\tilde{\chi}_1 j \quad - \quad uu \to \tilde{u}_L\tilde{u}_L \times \mathcal{B}(\tilde{u}_L \to \tilde{\chi}_1 j)$$

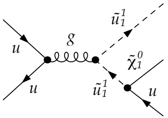
Handling the OS Divergences

Automatized OS Subtraction available @ MadGolem [Beenakker, Höpker, Spira, Zerwas]

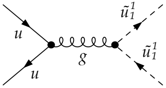
$$d\sigma^R \longrightarrow d\sigma^R\Big]_{\text{regular}} + d\sigma^{R*}\Big]_{\mathcal{O}(1/(p^2-m^2))}$$

$$ug \to \tilde{u}_L \tilde{\chi}_1 j \quad + \quad uu \to \tilde{u}_L \tilde{u}_L^* \to \tilde{u}_L \tilde{\chi}_1 j$$

$$\sigma = \int_{m+1} d\,\sigma^R \longrightarrow \int_{m+1} \left[d\,\sigma^R + d\,\sigma^{R*}(\Gamma_{\tilde{u}_L}) - d\sigma^{OS}(\Gamma_{\tilde{u}_L}) \right]$$



-



$$uu \to \tilde{u}_L \tilde{u}_L^* \to \tilde{u}_L \tilde{\chi}_1 j \quad - \quad uu \to \tilde{u}_L \tilde{u}_L \times \mathcal{B}(\tilde{u}_L \to \tilde{\chi}_1 j)$$

$$\frac{d\sigma^{OS}}{dM^2} = \sigma^{Born} \frac{m_{\tilde{u}_L} \Gamma_{\tilde{u}_L}/\pi}{(M^2 - m^2_{\tilde{u}_L}) + m^2\, \Gamma^2_{\tilde{u}_L}} + \mathcal{O}\left(\frac{1}{(M^2 - m^2_{\tilde{u}_L})} \right)$$

- Pointwise subtraction of the OS poles – analogue to CS dipoles
- Avoids double-counting & preserves gauge invariance & spin correlations
- $\Gamma_{\tilde{u}_L}$ as regulator $\Rightarrow$ dependence cancels in the final results

Outline

Testing MadGolem: virtual corrections

♠ Validation strategies

- gauge invariance
- cancellation of UV/IR divergences (analytically & numerically)
- Finite parts – numerical comparison with FeynArts/FormCalc/LoopTools [Hahn]

Testing MadGolem: virtual corrections

Validation strategies

- gauge invariance
- cancellation of UV/IR divergences (analytically & numerically)
- Finite parts – numerical comparison with FeynArts/FormCalc/LoopTools [Hahn]

An explicit example: SUSY-QCD 1-loop virtual corrections to $u\bar{u} \to \tilde{\chi}_1^0 \tilde{\chi}_1^0$

	σ^{NLO} (MadGolem)	σ^{NLO} (FormCalc)
$Z^0 - \bar{u} - u$ vertex	$-1.3064(1) \times 10^{-7}$	$-1.3064(5) \times 10^{-7}$
$\tilde{\chi}_1 - u - \tilde{u}_L$ vertex	$1.0916(3) \times 10^{-8}$	$1.091(2) \times 10^{-8}$
$\tilde{u}_L$ self-energy	$1.6375(1) \times 10^{-5}$	$1.637(1) \times 10^{-5}$
boxes	$1.858(2) \times 10^{-7}$	$1.86(4) \times 10^{-7}$

Testing MadGolem: IR divergences

♠ Validation strategies

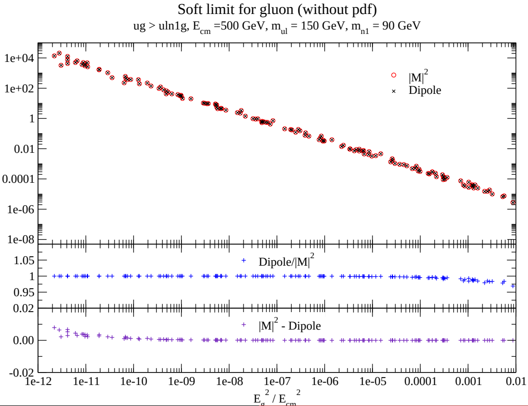
- α dependence [Nagy, Trócsányi] & behavior in the soft and collinear limits, for all dipoles
- Numerical stability and convergence

Testing MadGolem: IR divergences

Validation strategies

- α dependence [Nagy, Trócsányi] & behavior in the soft and collinear limits, for all dipoles
- Numerical stability and convergence

Diving in the soft/collinear region for $pp \to \tilde{u}_L \tilde{\chi}_1$

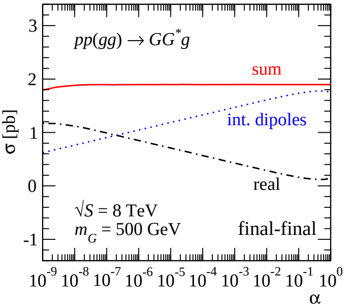


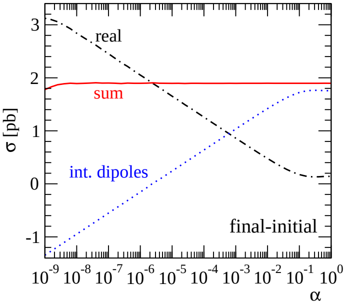
Testing MadGolem: IR divergences

Validation strategies

- α dependence [Nagy, Trócsányi] & behavior in the soft and collinear limits, for all dipoles
- Numerical stability and convergence

Checking α-dependence for $pp \to GG^*$





Testing MadGolem: On-shell subtraction

♠ Validation strategies

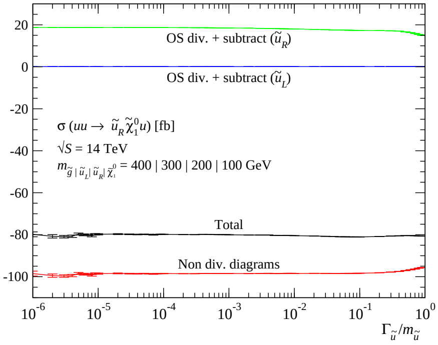
- Independence with respect to the regulator choice Γ/m
- Numerical stability and convergence

Testing MadGolem: On-shell subtraction

Validation strategies

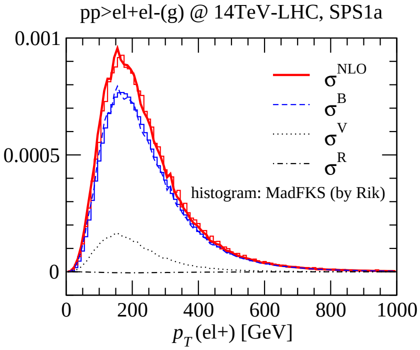
- Independence with respect to the regulator choice Γ/m
- Numerical stability and convergence

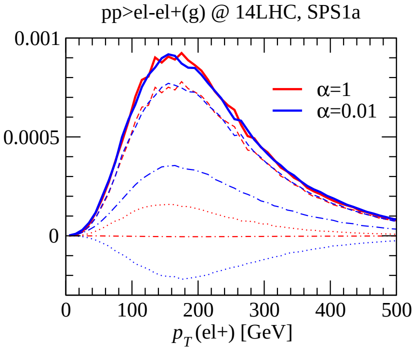
Performance of the OS Subtraction: $pp(uu \to \tilde{u}_R \tilde{\chi}_1 u)$



Testing MadGolem: distributions

♠ Cross-checking distributions: MadGolem meets MadFKS





Testing MadGolem: computing & comparing

- Systematic cross-check always involve:

Testing MadGolem: computing & comparing

- Systematic cross-check always involve:

i) UV/IR cancellation;

Testing MadGolem: computing & comparing

- Systematic cross-check always involve:

i) UV/IR cancellation;

ii) Finite parts of the one-loop amplitude - comparison to FormCalc/Looptools;

Testing MadGolem: computing & comparing

- Systematic cross-check always involve:

Outline

Running MadGolem: the user's perspective

3-stage procedure – 3 interfaces ↔ 3 executables

Stage 1: DEFINING THE PROCESS

process_card ↔ ./newprocess_nlo

Running MadGolem: the user's perspective

3-stage procedure – 3 interfaces ↔ 3 executables

Stage 1: DEFINING THE PROCESS

process_card ↔ ./newprocess_nlo

Stage 2: COMPUTING THE AMPLITUDE

./run_golem_pl

- At this point the user is able to:
  - Select diagram topologies ⇒ detailed analysis of the virtual corrections
  - Access the **analytical output** in several stages ⇒ very useful for cross-checking (and to dig out some physics!)

Running MadGolem: the user's perspective

3-stage procedure – 3 interfaces ↔ 3 executables

Stage 1: DEFINING THE PROCESS

process_card ↔ ./newprocess_nlo

Stage 2: COMPUTING THE AMPLITUDE

./run_golem_pl

♠ At this point the user is able to:

Closing remarks

MadGolem highlights

- Fully analytical procedure
- BSM-suitable loop calculator
- Broad coverage of spin & color structures
- Automated OS Subtraction
- Complete support of NLO QCD calculations for the SM, the MSSM and several other extensions.
  - **SUSY dipoles** (with α dependence)
  - **UV counterterms** & **SUSY restoration**
- Automatic generation of (parton-level) distributions

Closing remarks

MadGolem highlights

- Fully analytical procedure
- BSM-suitable loop calculator
- Broad coverage of spin & color structures
- Automated OS Subtraction
- Complete support of NLO QCD calculations for the SM, the MSSM and several other extensions.
  - **SUSY dipoles** (with α dependence)
  - **UV counterterms** & **SUSY restoration**
- Automatic generation of (parton-level) distributions

Closing remarks

Future directions

- Complete the full automation of $2 \to 2$ @ MSSM
- Complete the cross-checking program
- Extend the supported BSM models
- Prepare the code for its public release (structure, interfaces, robustness) – $\mathcal{O}(\text{few months})$

Engaging collaboration: lines of common interest

♠ **MadGolem & MadGraph5**: [Alwall et al.]:
recode the extended MadDipole module of MadGolem into MadGraph5

♠ **MadGolem & MadDM**: [Alwall, Backovic, Kong, McCasey]:
use of the MadGolem loop calculator for the analysis of loop-induced DM decay processes $\to$ completely unmatched feature to e.g. MicroMEGAS.

♠ **MadGolem & FeynRules**: [Christensen, Duhr, Fuks]:
Automating the generation of UV counterterms for NLO $\mathcal{O}(\alpha_s)$ corrections to generic New Physics models.

♠ **MadGolem & GoSam**: [Cullen, Heinrich, et al.]:
Dealing with higher dimensional operators
