**Landscape** of possible 4d “universes”

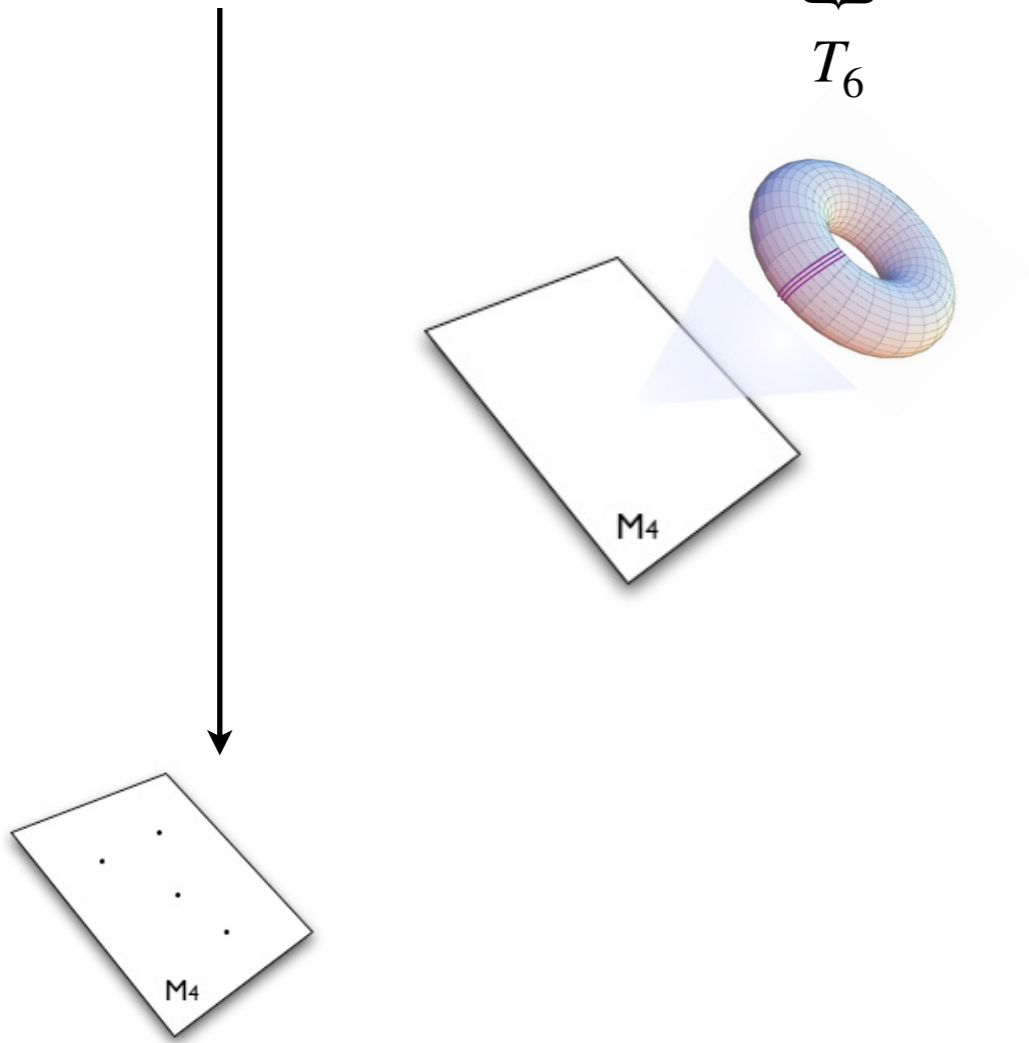

# The string theory landscape

**String Theory**

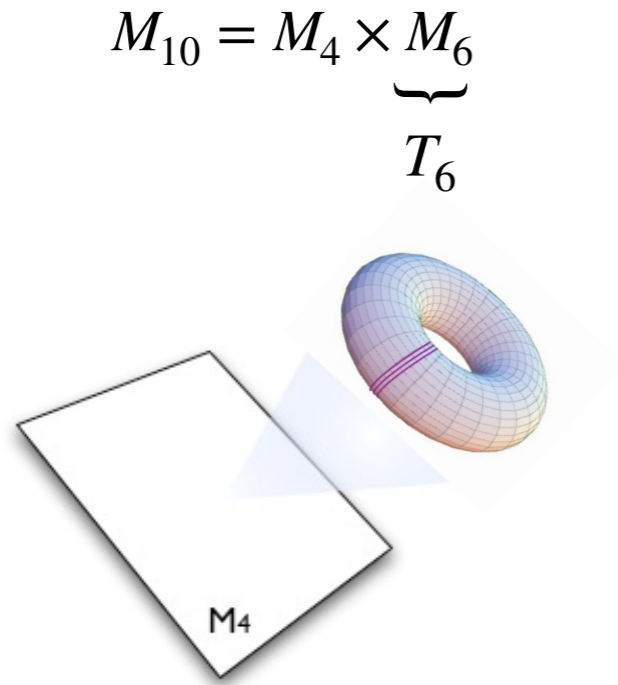

# Simplest exemple

10 d

# Simplest exemple

10 d

**BUT**

→ supersymmetric spectrum

→ no cosmological constant

→ Massless scalar particles

(radii of circles, can be changed at no cost)

# Simplest exemple

10 d

**BUT**

→ supersymmetric spectrum

→ no cosmological constant

→ Massless scalar particles

(radii of circles, can be changed at no cost)

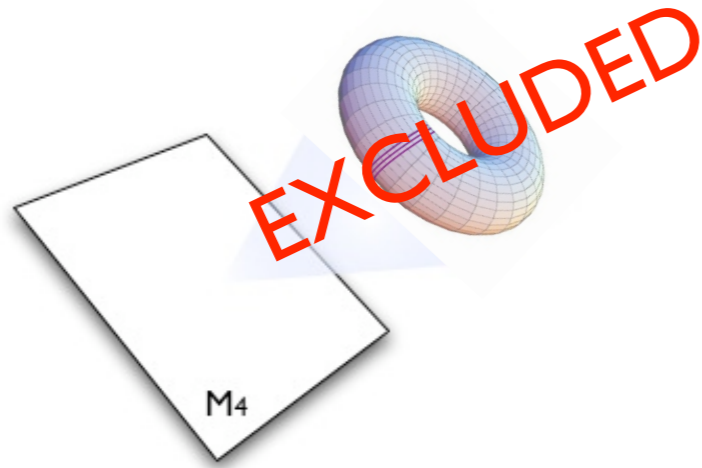

Would lead to unobserved long-range  
fifth force(s)

# Simplest exemple

10 d

$$M_{10} = M_4 \times \underbrace{M_6}_{T_6}$$

**BUT**

→ supersymmetric spectrum

→ no cosmological constant

→ Massless scalar particles

(radii of circles, can be changed at no cost)

Would lead to unobserved long-range  
fifth force(s)

# Next to simplest example:

$$M_{10} = M_4 \times M_6$$

# Next to simplest example:

$$M_{10} = M_4 \times M_6$$

Eq. of motion:  
 $E \ll M_s \lesssim M_P$

$M_6 : R_{mn}=0$  Ricci-flat

Calabi-Yau  
manifolds

# Next to simplest example:

$$M_{10} = M_4 \times M_6$$

Eq. of motion:  
 $E \ll M_s \lesssim M_P$

$M_6 : R_{mn}=0$  Ricci-flat

Calabi-Yau  
manifolds

4D:

Still supersymmetric (less than for tori,  $\mathcal{N} = 1$ )

# Next to simplest example:

$$M_{10} = M_4 \times M_6$$

Eq. of motion:  
 $E \ll M_s \lesssim M_P$

$M_6 : R_{mn}=0$  Ricci-flat

Calabi-Yau  
manifolds

4D:

Still supersymmetric (less than for tori,  $\mathcal{N} = 1$ )

Massless particles (e.g. the volume)

# Next to simplest example:

$$M_{10} = M_4 \times M_6$$

Eq. of motion:  
 $E \ll M_s \lesssim M_P$

$M_6 : R_{mn}=0$  Ricci-flat

Calabi-Yau  
manifolds

4D:

Still supersymmetric (less than for tori,  $\mathcal{N} = 1$ )

Massless particles (e.g. the volume)

4D space-time = Minkowski (no cosmological constant)

# Next to simplest example:

$$M_{10} = M_4 \times M_6$$

Richer than tori,  
can overcome  
problems

Eq. of motion:  
 $E \ll M_s \lesssim M_P$

$M_6 : R_{mn}=0$  Ricci-flat

Calabi-Yau  
manifolds

4D:

Still supersymmetric (less than for tori,  $\mathcal{N} = 1$ )

Massless particles (e.g. the volume)

4D space-time = Minkowski (no cosmological constant)

# How to avoid massless scalar particles?

Add fluxes

# How to avoid massless scalar particles?

Add fluxes

flux

fixed radius where  
gravitational attraction

=

electromagnetic repulsion

M. Graña, "Flux compactifications in string theory: a comprehensive review"  
Phys. Repts, 2006

# How to avoid massless scalar particles?

Add fluxes

flux

fixed radius where  
gravitational attraction

=

electromagnetic repulsion

Fluxes can also break supersymmetry!

M. Graña, "Flux compactifications in string theory: a comprehensive review"  
Phys. Repts, 2006

# How to avoid massless scalar particles?

## Add fluxes

flux

fixed radius where  
gravitational attraction

=

electromagnetic repulsion

M. Graña, "Flux compactifications in string theory: a comprehensive review"  
Phys. Repts, 2006

Fluxes can also break supersymmetry!

Large number (finite?) of 6d CY and (for each of them)  $10^{500}$  possible flux configurations below the upper bound given by "tadpole cancelation"
