

Technology Platform Light Microscopy

Wednesday 11 September 2024 14:12 (12 minutes)

A broad range of light microscopy technologies are available within the Technology Platform Light Microscopy (TPLM) of UHH and the Advanced Light and Fluorescence Microscopy (ALFM) Facility at CSSB Hamburg. Light microscopy has its merits when proteins and their function need to be investigated within intact cells. I will present an overview of the microscopes and services offered by TPLM and ALFM that can prevent Waterloo moments in structural biology research projects and instead turn you into a Dancing Queen.

Presenter: THÜNAUER, Roland (UHH)

Session Classification: Take a chance on me - Facility presentations
