## Efficiency optimisation at ANATOMIX

*Tuesday 25 June 2024 15:20 (40 minutes)*

At the ANATOMIX beamline we optimize for good tomographies in terms of image quality (dynamic range, resolution), low dose (efficient optics and absorbing scintillator), and fast scan speed (less than 15 min). A samples changer is available for many samples (36 samples). The tomography setup is often readapted to the user samples needs (magnification, beam energy).
