

General Status

- CC obs data fit has finally converged!!!
 - Not sure how to deal with BKG systematic, see next slide.
 - Can do the compatibility with the muon channel now. Will just use old muon fit from last year.
- Tried submitting CF systematic variations (for s2w) whilst at ATLAS week but many failed, will look into this.
 - Can still submit CentOS 7 jobs from the naf?
 - Timescale for migration to Alma 9? Both from the naf and aidy.

BKG Systematic

- Originally thought that BKG was the sum of TopGen + MJ systematics but this isn't the case.
- [In s2w decompositions](#), Stefano lists MC background stat, MC background norm and MJ. Presumably BKG = MC background stat? Isn't this covered in MC stat uncertainty (or is this only signal?)
- Keep BKG in total systematics or remove?
