# Alma9 Migration

## mostly bugfixes

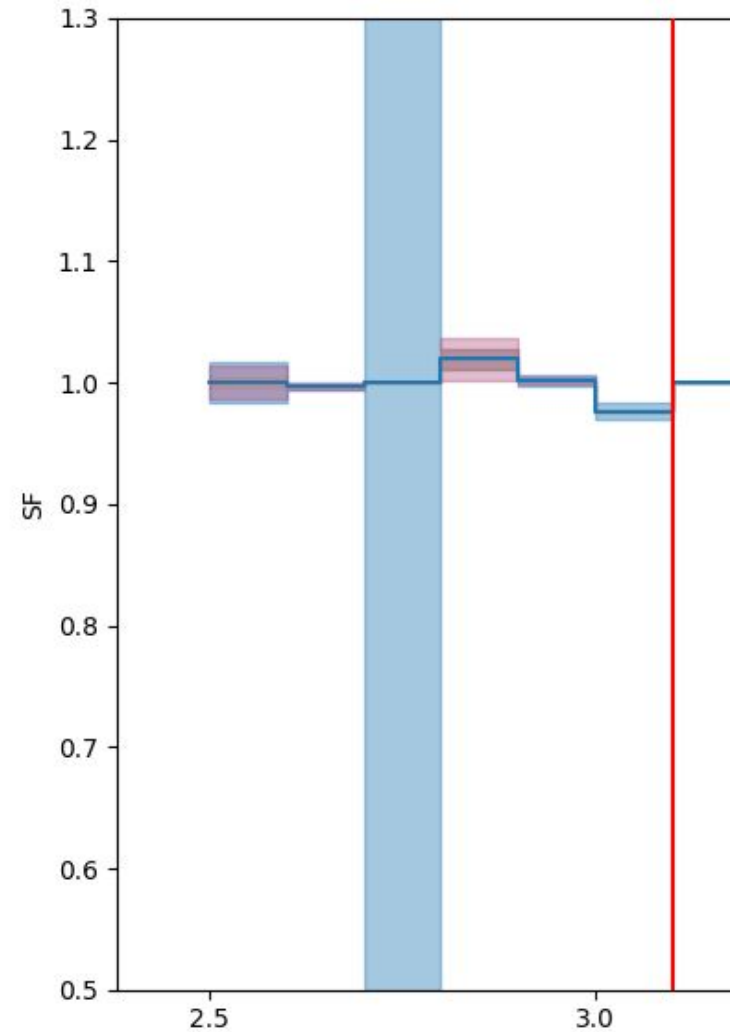

- Error: *ZAi\_rdict.pcm* and *FTL\_rdict.pcm* not being found in lib directory
  - always had these errors even before migration
  - had been ignored by *BatchDaemon*
  - error changed from `<TCling::RegisterModule>` to `<TCling::LoadPCM>` with migration
    - added LoadPCM to list of ignored errors (RegisterModule)
  - files are actually located in dict directory
    - might solve errors by changing make file to put them into lib instead (???)
- decoded *subprocess.check\_output* from bytes to string in *BatchDaemon*
- updated list comprehension syntax from python2 to python3 in a few scripts
- changed comparison operator between mode and integer from *is* to *==*
- check branch Lukas\_CF

# fwd el ID SFs in very high pt bin ( $> 100$ GeV)

old production + old calibration + old aidy

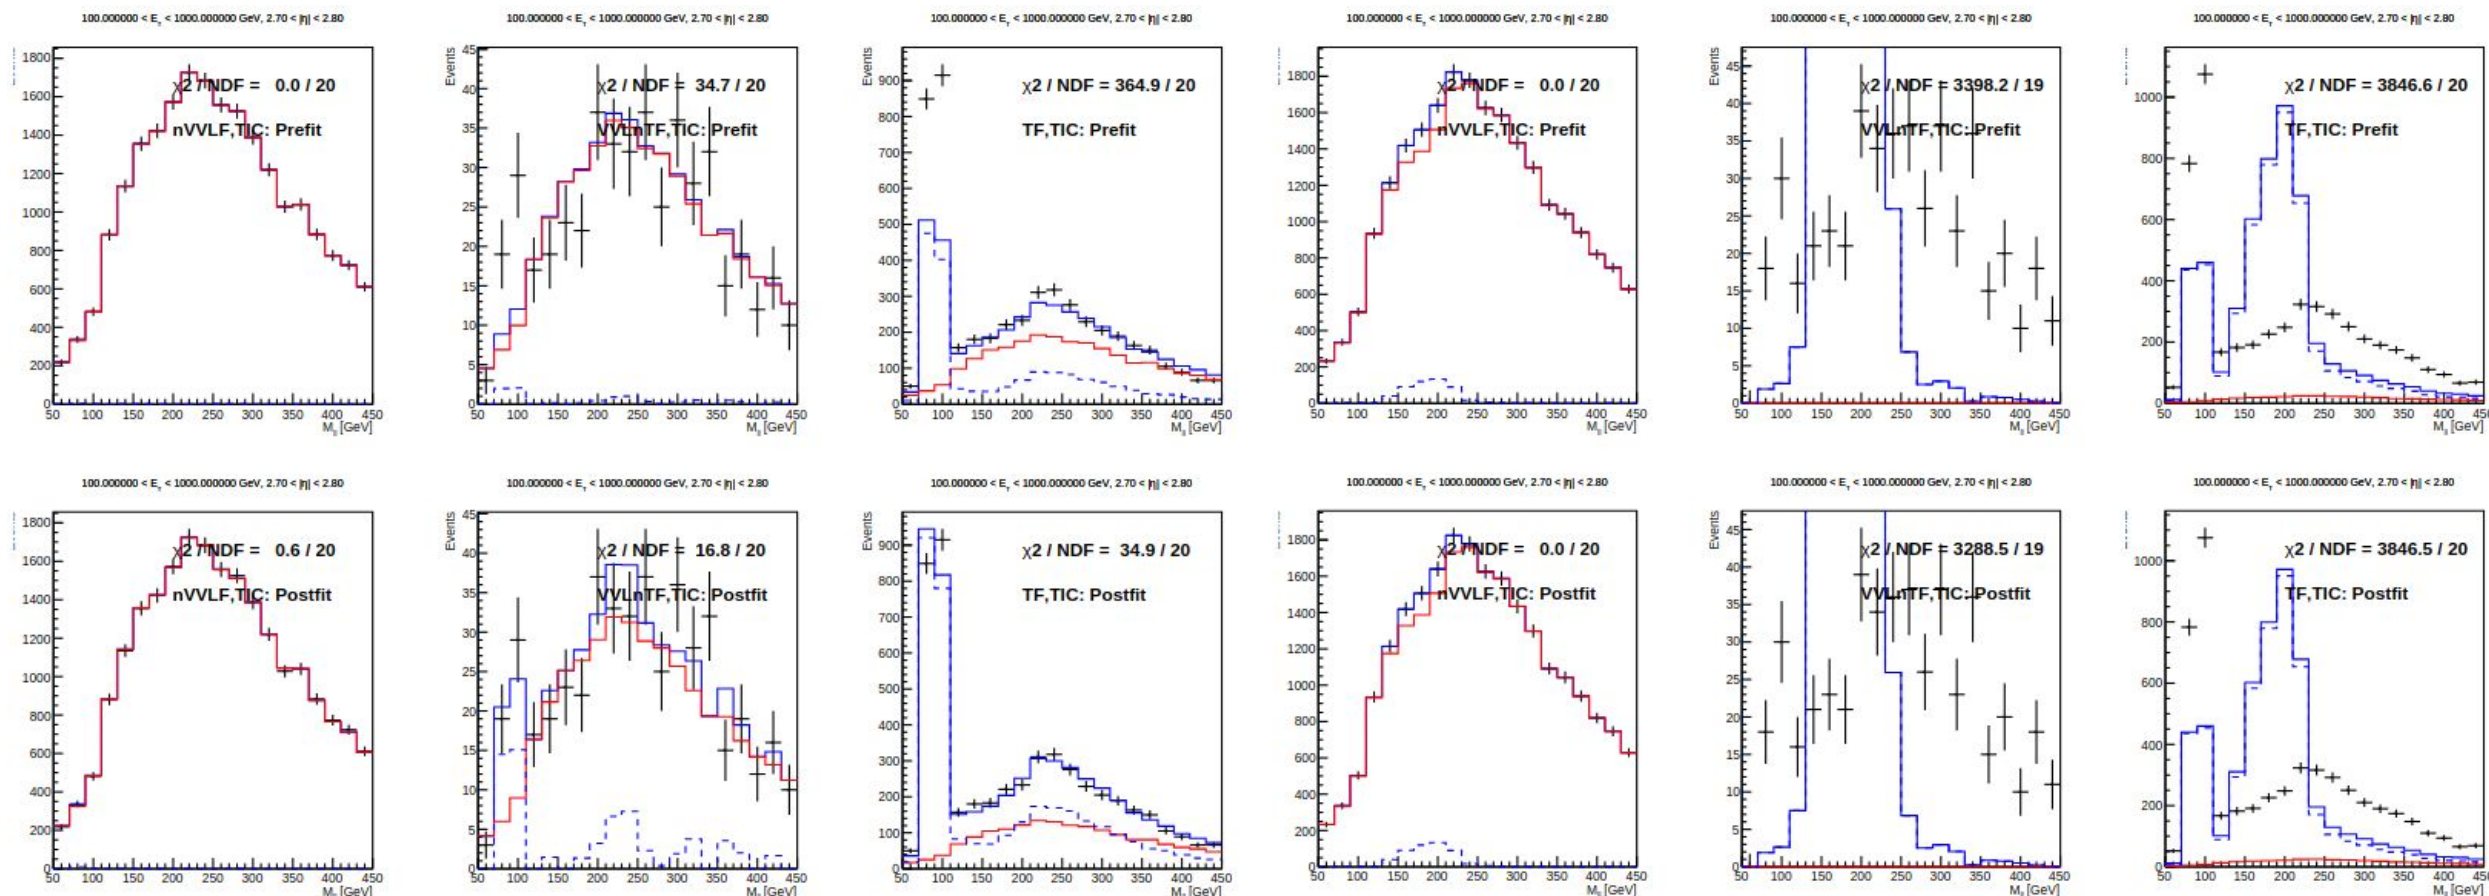

new production + new calibration + June aidy

# fwd el ID fit in bad bin (eta: 2.7-2.8, pt: >100GeV)

old production + old calibration + old aidy

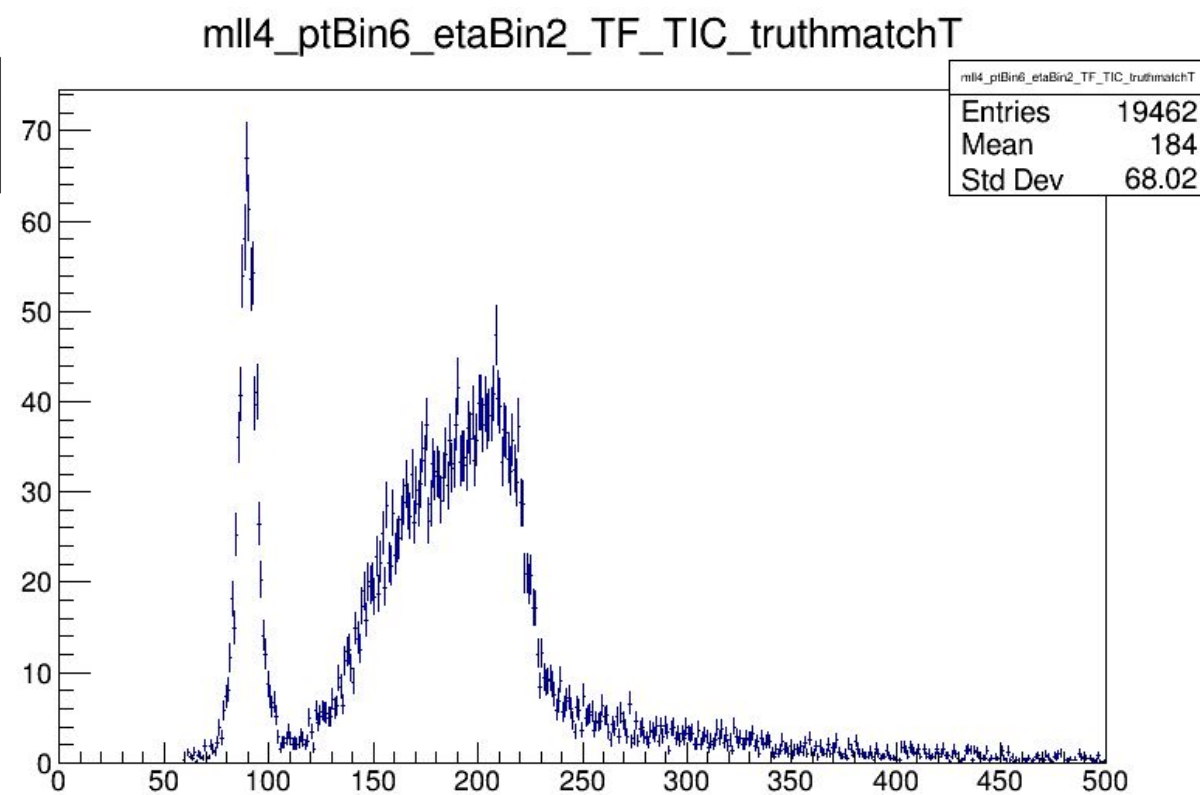

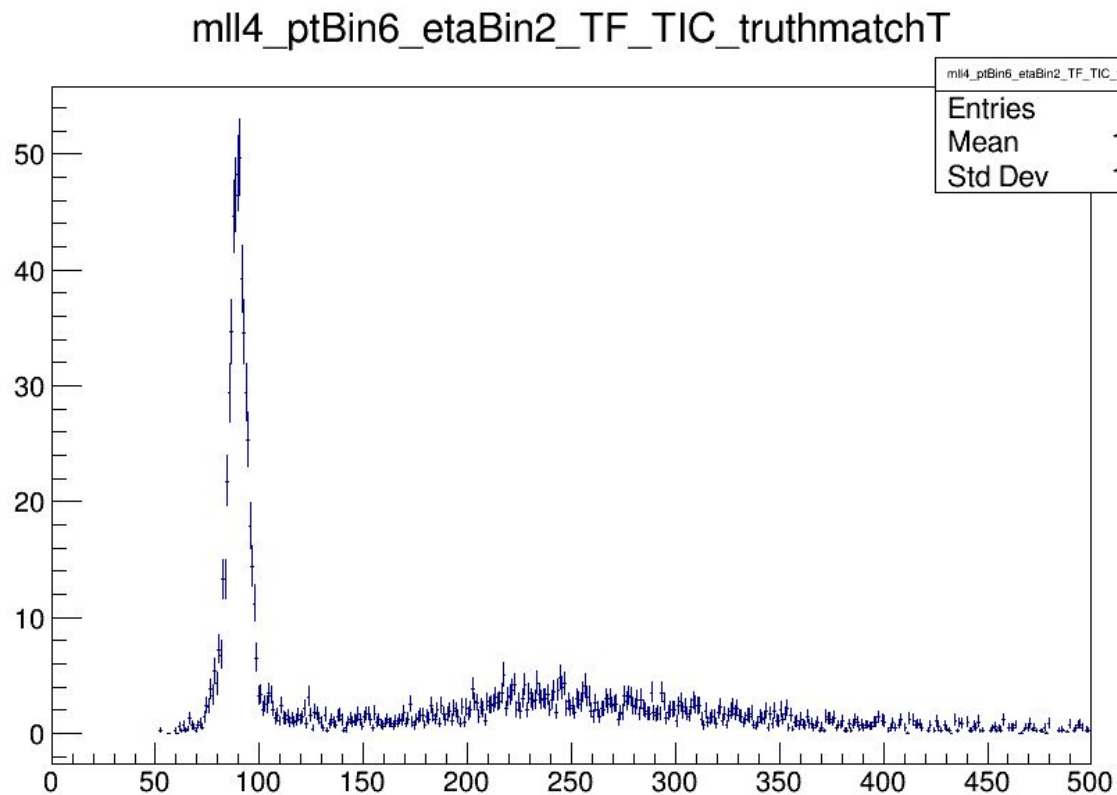

new production + new calibration + June aidy

# MC reco scan in bad bin (eta: 2.7-2.8, pt: >100GeV)

new production + old calibration + Alma9 aidy

new production + new calibration + Alma9 aidy

why is the number of entries so different?!
