From Python Tools to Middle Layer

Friday 20 September 2024 09:45 (15 minutes)

Systems with many different components and different users require abstractions to make them accessible. For the currently most popular language in the science and data science community, Python, we created our own abstractions. So did others and a harmonization makes sense. This talk will cover the needs, our existing solution and give an outlook to the community wide emerging approaches to this topic.

Presenter: GETHMANN, Julian (KIT)

Session Classification: Stream 1
