

Lessons learned when using the DESY JOIN2 APC-Modul at GSI in different publication infrastructure for the DFG OA monitoring

Monday 7 October 2024 15:00 (30 minutes)

This presentation reports on the use of the JOIN2 APC module from DESY at the GSI Helmholtz Center for Heavy Ion Research in Darmstadt. In contrast to DESY, there is no central office for all publication billing at the GSI Helmholtz Center and no approval procedure.

Topics will be problems of experimental use or “no” corresponding authors in the health research area, the usage as quality and error control etc.

Lessons learned for the new module for JOIN2 MyCore/MIR will be presented - especially the pre-set assignments for the transformative contracts.

Presenter: GROSSE, Katrin (GSI Helmholtzzentrum für Schwerionenforschung)

Session Classification: Workshop
