Our Deepest Thanks for your Support & Brief Report on Japanese Current Status after Great East Japan Earthquake/Tsunami

### On behalf of participants from Japan

T. Uematsu (Kyoto Univ.)
Slides prepared by H. Kawamura (KEK)

German-Japanese Workshop on "Modern Trends in Quantum Chromodynamics"

October 3-5 2011

## Participants of the Workshop from Japan

Y Koike (Niigata U)

T. Uematsu (Kyoto U)

Y.Sumino (Tohoku U)

A. Ukawa (Tsukuba U)

H.Kawamura

S.Kumano

Y.Kurihara

(KEK)

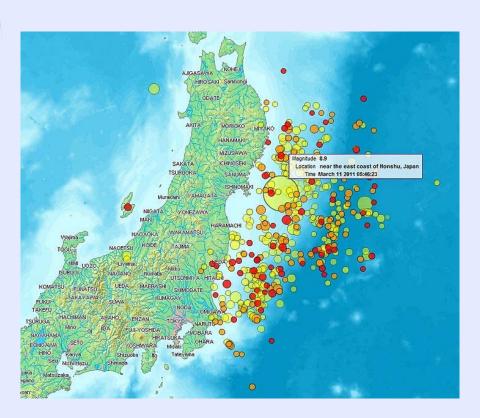

N.Saito

K.Tanaka (Juntendo U)

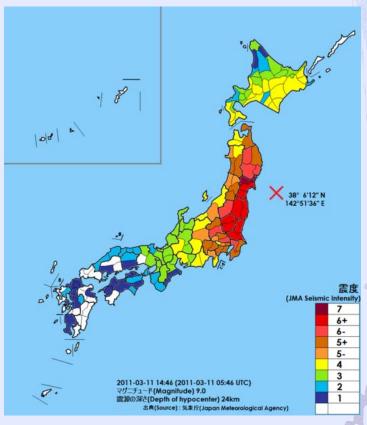

Z. Hioki(Tokushima U)

### Great East-Japan Earthquake

- 9.0M earthquake on March 11 at 14:46 JST.
- Lasted more than 5 min. followed by strong aftershocks (even now).
- Biggest recorded earthquake in Japan ("once in a thousand years").

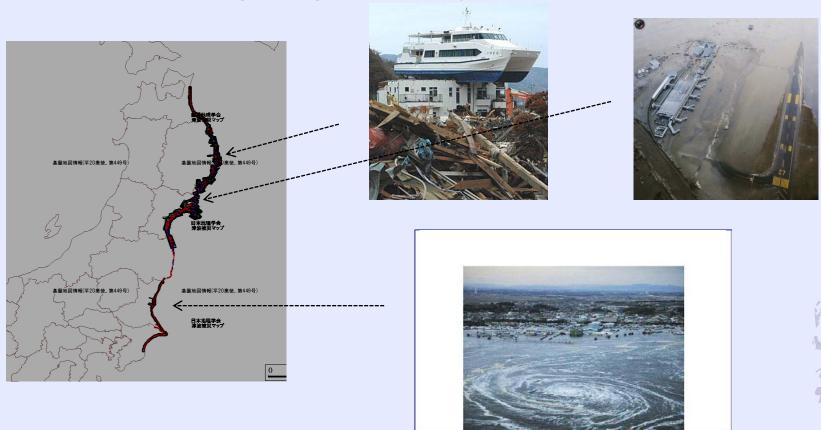

Epicenters (11-14 March)

Seismic intensity

#### Tsunami caused by Earthquake

- Tsunami attacked the north-east coast of Japan approx. 30-60 min after the quake.
- More than 20,000 of casualties (16,000 dead 4,000 still missing).
- 75,000 are taking refuge (as of Sep. 20).

### Fukushima nuclear power plant

Tokyo

- The reactor cooling system stopped working due to power loss caused by 14m-high tsunami at around 15:40 JST.
- Fuel meltdown occurred at reactor 1-3 in 1-4 days.
- 20km from the plant : off-limit zone.

(evacuation condition: 20μSv/yr)

$$^{137}$$
Cs( $\tau_{1/2}$ =30yrs),  $^{134}$ Cs( $\tau_{1/2}$ =2yrs)

More than 100,000 people have left their home.

Fukushima Daiichi power plant

5-7 April

#### Earthquake affected our activities

- Buildings & facilities are damaged at Tohoku Univ., Tsukuba Univ. and KEK (Tsukuba, Tokai).
- •The power shortage affected research activity in East Japan (15% reduction of electricity usage was required by law until Sep. 23).
  - No lights, no heater in the office.
  - Partial usage of the supercomputers.
  - Running of experimental facilities were restricted at KEK.

**KEK library** 

Road in front of Linac (J-PARC)

### A half year after March 11

#### Recovery in the area struck by tsunami

- Water, fuel, electricity shortage was severe for several weeks after the quake (even in Tokyo). Now the supply is back to normal.
- All the scheduled construction of the temporary housing facilities for 51,000 families will be completed in this month.
- Removal and disposal of Tsunami debris take a few years.

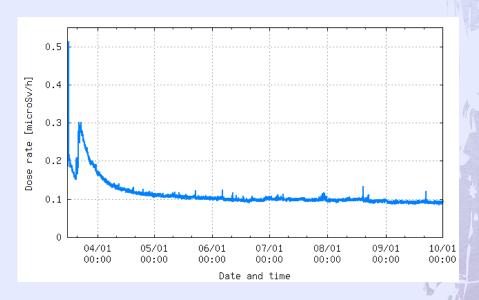

- Now everything is back to normal for theorists.
- Experimentalists working at J-PARC are making efforts to resume their experiments early in 2012. → Saito-san's Talk.

#### Fukushima nuclear power plant

 Radiation level has greatly decreased, but the reactor cooling system and radioactive leak are not yet under full control.

Monitoring at KEK (165km away)

#### Final words

- All of us here have once spent some time in Germany and/or have a history of communication and collaboration with QCD physicists in Germany.
- We are very happy to be here to enjoy physics discussions with the German colleagues after the disastrous earthquake.
- Your support organizing this workshop is strengthening the Germany-Japan collaboration in our field.
- •We deeply appreciate the encouragement and support from the community, DESY and DFG.
