Handle OpenAFS Identities with OpenIDM

Thursday, 6 October 2011 09:30 (30 minutes)

Summary

OpenIDM is an Identity Management system based on open standards and released in open source. The talk shows how to use openIDM to simplify user management and more consistent user provisioning in OpenAFS environment with external users repository like Directory Server, Database or Active Directory. The session gives you an overview over the setup, scripts and configurations for an enterprise environment as well as experienced problems for Active Directory Integration.
