### *Wrap up*

---

- Option for following events: maybe want to extend the workshop duration by half a day to offer time and space for satellite meetings beyond the working groups
- Some working groups decided to have intermittent meetings (in smaller round) to proceed with collaborating projects
- At several occasions during the working groups, the wish was expressed to have a shared database and wiki of some sort
  - o Only accessible to workshop participants (i.e. requires authentication and registration),
  - o Important: for this an authentication method as used in indico should be used, so that no one is forced to set up yet another account (e.g. HiFis log-in)
  - o Bernd and Marie will come up with a suggested solution to this
- Proposed usage of a joint wiki and database:
  - o Overview of test beam, test ports and radiation sources (e.g. THz sources) available at the different institutes and facilities with contact names
  - o Overview of typically utilized THz sensor material and THz detectors (with details about applicable freq. range, sensitivity, response times etc)
  - o Overview of machine and beam properties with their requirements for diagnostics at the different facilities (existing and planned)
- On this workshops overview page, we add the info about the existing mailing list for this event
  - o Rasmus (as original initiator of the mailing list) will add more list admins
