

Data Access and Storage Systems at DESY

Thursday 3 July 2025 16:50 (25 minutes)

Data access is an essential component of the scientific process, as is the storage system where that data resides. There is no one-size-fits-all solution, which makes selecting the right storage system a non-trivial task.

In this presentation, I will briefly overview the file and storage systems used at DESY and offer guidelines for matching different workloads to appropriate storage solutions.
