

# IT, DMA, IDAF and MU

20 June 2025

# DESY-IT, DMA, IDAF

- IDAF: LK2 → discussion on analysis facilities, requirements from MU?
- DESY-IT \ IDAF: LK1, MT-DMA
- DMA: Cross-division, cross-program, cross-topic, cross-center, cross-disciplinary
  - Software developments, new algorithms etc. are subject of DMA. Their application or very case-specific extensions/modifications of methods are subject of specialized topics (such as MU, MML). DMA is an “enabling topic” via software and methods for Matter research (in other topics), while IDAF is an “enabling infrastructure” for computing and data management/ analysis.
  - **AI/ML strategy as part of DMA strategy process**
  - **Pilot Cases MU <-> DMA?**
- Note: Data Hubs in preparation, relevant for local experiments
- Quantum Computing?
- Feel free to contact me ([philipp.neumann@desy.de](mailto:philipp.neumann@desy.de)) directly, or FH Scientific Computing Platform representatives, who are involved in the DMA strategy process, too!
