

General

- tools are nice: requirement to the environment is minimum, it also worked on supercomputer Fugaku.
memo: we need `perl-HTTP-Message` package on rocky linux 8.10
- wish list: list of (typical) required packages may help
- Collaborations in Japan have a good relationship with JLDG (and ILDG) people, which would make uploading ensembles easy.
- While not directly related to this hands-on, we would appreciate it if ILDG would continue to maintain the method of uploading configurations through JLDG.
- Compared to the previous hands-on at 2023, we have a much deeper understanding of how ILDG works, particularly regarding the distinctions between LDG and JLDG.

Upload plans

- PACS Collaboration: we plan to upload the PACS10 configurations to ILDG in future, probably a few years later.
- JLQCD Collaboration: we plan to upload at least one ensemble in a few month.
